

Monitoring and Reporting Change Logs, Workflows, and Jobs

CDO effectively monitors configuration change logs, bulk device operations, and the process that runs when communicating with devices. This helps you understand how your network's existing policies influence its security posture.

- [View Change Log Differences, on page 2](#)
- [Export the Change Log, on page 3](#)
- [Change Request Management, on page 4](#)
- [Monitor Jobs in CDO, on page 8](#)
- [Monitor Workflows in CDO, on page 9](#)

Manage Change Logs in CDO

The Change Log captures configuration changes made in CDO, providing a single view that includes changes in all supported devices and services. These are some of the features of the change log:

- Side-by-side comparison of changes made to device configuration.
- Plain-English labels for all change log entries.
- Records on-boarding and removal of devices.
- Detection of policy change conflicts occurring outside of CDO.
- Answers who, what, and when during an incident investigation or troubleshooting.
- The full change log, or only a portion, can be downloaded as a CSV file.

Manage Change Log Capacity

CDO retains the change log information for one year and deletes data older than a year.

There is a difference between the change log information stored in CDO's database and what you see in an exported change log. See [Export the Change Log, on page 3](#) for more information.

Change Log Entries

A change log entry reflects changes to a single device configuration, an action performed on a device, or if a change was made to the device outside of CDO.

- For change log entries that contain a change to configuration, you can expand the change by clicking anywhere in the row.
- For out-of-band changes made outside of CDO that are detected as a conflict, **System User** is reported as the Last User.
- CDO closes a change log entry after the device's configuration on CDO is synced with the configuration on the device or when a device is removed from CDO. Configurations are in sync after "reading" the configuration from the device to CDO or by deploying the configuration from CDO to the device.
- CDO creates a new change log entry immediately after closing an existing entry. Additional configuration changes are added to the open change log entry.
- Events are displayed for read, deploy, and delete actions against a device. These actions close a device's change log.
- A change log is closed once CDO is in sync with the configuration on the device (either by reading or deploying), or when CDO no longer manages the device.
- If a change is made to the device outside of CDO, a "conflict detected" entry is written to the change log.

Pending and Completed Change Log Entries

Change logs have a status of either **pending** or **completed**. As you make changes to a device's configuration using CDO, those changes are recorded in an **pending** change log entry. Reading a configuration from a device to CDO, deploying changes from CDO to a device, deleting a device from CDO completes, or running a CLI command that updates the running configuration file completes the pending change log and creates a new one for future changes.

Search and Filter Change Log Entries

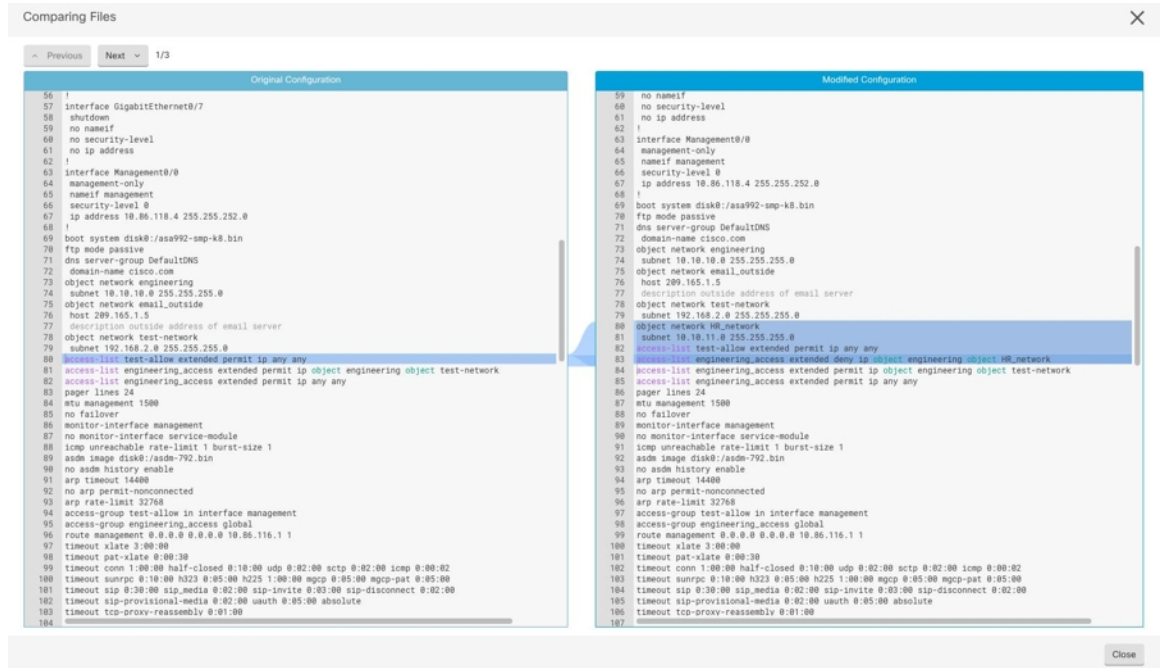

You can search and filter change log entries. Use the search bar to find events that you search for. Use the filter  to find the entries that meet all the criteria you specify. You can also combine the operations by filtering the change log and adding a keyword to the search field to find an entry within the filtered results.

View Change Log Differences

Click **Diff** in the change log to open up a side-by-side comparison of the changes in the running configuration file of the device. You can see the differences in the two versions.

In the illustration below, the **Original Configuration** is the running configuration file before a change was written to the ASA, and the **Modified Configuration** column shows the running configuration file after the change was written. In this case, the **Original Configuration** column highlights a row in the running configuration file that actually didn't change but gives you a point of reference in the **Modified Configuration** column.

Follow the lines across from the left to the right column and you can see the addition of the HR_network object and the access rule preventing addresses in the "engineering" network to reach addresses in the "HR_network" network. Use the **Previous** and **Next** buttons to click through the changes in the file.

Export the Change Log

You can export all or a subset of the CDO change log to a comma-separated value (.csv) file so you can filter and sort the information in it however you like.

To export the change log to a .csv file, follow this procedure:

Step 1

In the navigation pane, click **Change Log**.

Step 2

Find the changes you want to export by taking one of these actions:

- Use the filter  field and the search field to find exactly what you want to export. For example, filter by device to see only the changes for your selected device or devices.
- Clear all the filters and search criteria in the change log. This allows you to export the entire change log.

Note

CDO retains 1 year of change log data. It is recommended to filter the change log contents and download the results of a .csv file rather than downloading up to a year of change log history.

Step 3

Click the export button  in the top right of the change log.

Step 4 Give the .csv file a descriptive name and save the file to your local file system.

Differences Between the Change Log Capacity in CDO and the Size of an Exported Change Log

The information that you export from CDO's change log page is different from the change log information CDO stores in its database.

For every change log, CDO stores two copies of the device's configuration, the "starting" configuration and either the "ending" configuration in the case of a closed change log; or the "current" configuration, in the case of an open change log. This allows CDO to display configuration differences side by side. In addition, CDO tracks and stores every step "change event", with the username that made the change, the time the change was made, and other details.

When you export the change log, however, the export does not include the two complete copies of the configuration. It only includes the "change events," which makes the export file much smaller than the change log CDO stores.

CDO stores up to 1 year of change log information, this includes the two copies of the configuration.

Change Request Management

Change Request Management enables associating a **Change Request** and its business justification, opened in a third-party ticketing system, with a **Change Log** event. Use **Change Request Management** to create a **Change Request** in CDO and associate it with Change Log events. You can search for this change request by **Name** within the Change Log.

Note In CDO, **Change Request Tracking** and **Change Request Management** refer to the same functionality.

Enable Change Request Management

Enabling change request tracking affects all users of your tenant.

Step 1 In the left pane, click **Settings > General Settings**.

Step 2 Enable the **Change Request Tracking** toggle button.

When enabled, the Change Request menu appears in the bottom-left corner and the Change Request drop-down list is available in the **Change Log**.

Create a Change Request

Step 1 In CDO, click the + in the Change Request menu at the bottom-left corner.

Step 2 Enter a **Name** and **Description**.

Ensure that the **Name** corresponds to a Change Request identifier your organization intends to use and the **Description** describes the purpose of the change.

Note You cannot modify the name of a **Change Request** after you create it.

Step 3 Click **Save**.

Note When a **Change Request** is saved, CDO associates all new changes with that change request name. This association continues until you either [Disable Change Request Management](#) or [Clear the Change Request Toolbar](#) from the menu.

Associate a Change Request with a Change Log Event

Step 1 In the left pane, click **Change Log**.

Step 2 Expand the change log to view the events you want to associate with a **Change Request**.

Step 3 In the Change Request column, click the drop-down list for the event.

Note Latest change requests are displayed first on the change request list.

Step 4 Select a **Change Request** and click **Select**.

Search for Change Log Events with Change Requests

Step 1 In the left pane, click **Change Log**.

Step 2 In the Change Log search field, enter the name of the **Change Request** to find the associated change log events. CDO highlights change log events with exact matches.

Search for a Change Request

Step 1 Click the Change Request menu in the bottom-left corner.

Step 2 Enter the name of the **Change Request** or a relevant keyword in the search field. As you type, you see results that partially match your input, appear in both the **Name** and **Description** fields.

Filter Change Requests

- Step 1** In the left pane, click **Change Log**.
- Step 2** Click the filter icon to view all options.
- Step 3** In the search field, enter the name of the **Change Request**.
As you type, results that partially match your entry begin to appear.
- Step 4** Select the **Change Request** by checking the corresponding checkbox.
The matches appear in the **Change Log** table. CDO highlights change log events with exact matches.
-

Clear the Change Request Toolbar

To avoid automatic association of change log events with an existing **Change Request**, clear the information in the change request toolbar.

- Step 1** Click the Change Request menu in the bottom-left corner.
- Step 2** Click **Clear**.
The Change Request menu now displays **None**.
-

Clear a Change Request Associated with a Change Log Event

- Step 1** In the left pane, click **Change Log**.
- Step 2** Expand the **Change Log** to view the events that you want to disassociate from **Change Requests**.
- Step 3** Click the change request drop-down list for the event.
- Step 4** Click **Clear**.
-

Delete a Change Request

Deleting a **Change Request** removes it from the change request list, but not from the **Change Log**.

- Step 1** Click the change request menu in the bottom-left corner.
- Step 2** Click the bin icon to delete a **Change Request**.
- Step 3** Click the check mark to confirm.
-

Disable Change Request Management

Disabling **Change Request Management** or **Change Request Tracking** affects all users of your account.

-
- Step 1** In the left pane, click **Settings > General Settings**.
- Step 2** Disable the **Change Request Tracking** toggle button.
-

Change Request Management Use Cases

These use cases assume that you have previously enabled Change Request Management following the above instructions.

Track Firewall Changes Made to Resolve a Ticket Maintained in an External System

In this use case, you are making firewall changes to resolve a ticket maintained in an external system. You want to associate change log events resulting from those firewall changes with a change request. Follow this procedure to create a change request and associate change log events with it:

1. [Create a Change Request, on page 5](#).
2. Use the ticket name or number from the external system as the name of the change request. Add the justification for the change or other relevant information in the description field.
3. Ensure that the new change request is visible in the change request toolbar.
4. Make the firewall changes.
5. In the navigation pane, choose **Change Log** and find change log events that are associated with your new change request.
6. [Clear the Change Request Toolbar, on page 6](#) when done.

Manually Update Individual Change Log Events After Firewall Changes Are Made

In this use case, you made firewall changes to resolve a ticket that is maintained in an external system but forgot to use the change request management feature to associate change requests with the change log events. You want to update the change log events with the ticket number. Follow this procedure to associate change requests with change log events:

1. [Create a Change Request, on page 5](#). Use the ticket name or number from the external system as the name of the change request. Use the description field to add the justification for the change or other relevant information.
2. In the navigation pane, choose **Change Log** and search for the change log events that are associated with the firewall changes.
3. [Associate a Change Request with a Change Log Event, on page 5](#).
4. [Clear the Change Request Toolbar, on page 6](#) when done.

Search for Change Log Events Associated with a Change Request

In this use case, you want to find out what change log events were recorded in the Change Log because of the work that is done to resolve a ticket maintained in an external system. Follow this procedure to search for change log events that are associated with a change request:

1. In the navigation pane, choose **Change Log**.
2. Search for change log events that are associated with change requests using one of the methods below:
 - In the Change Log search field, enter the exact name of the change request to find change log events associated with that change request. CDO highlights change log events with exact matches.
 - [Filter Change Requests, on page 6](#) to find the change log events.
3. View each change log to find the highlighted change log events showing the associated change request.

Monitor Jobs in CDO

The **Jobs** page provides an overview of the progress of bulk operations, such as reconnecting multiple devices, reading configurations from multiple devices, or upgrading multiple devices simultaneously. The Jobs table uses color-coded rows with the status of individual actions, indicating if they have succeeded or failed.

One row in the table represents a single bulk operation. This one bulk operation may have been, for example, an attempt to reconnect 20 devices. Expanding a row in the **Jobs** page displays the results for each of the devices affected by the bulk operation.

Action	Status	User	Start	End	Scheduled
Execute CLI Command	0 0 1 0 0 0		11/2/2023, 9:37:03 AM	11/2/2023, 9:37:04 AM	
Deploy Changes	0 0 1 0 0 0		11/2/2023, 3:30:00 AM	11/2/2023, 3:30:04 AM	Every day at 3:30 AM
Deploy Changes	0 0 1 0 0 0		11/2/2023, 3:30:00 AM	11/2/2023, 3:30:03 AM	Every day at 3:30 AM
Deploy Changes	0 0 1 0 0 0		11/2/2023, 3:30:01 AM	11/2/2023, 3:30:03 AM	Every day at 3:30 AM
Deploy Changes	0 0 1 0 0 0		11/2/2023, 3:30:00 AM	11/2/2023, 3:30:02 AM	Every day at 3:30 AM
Deploy Changes	0 0 1 0 0 0		11/1/2023, 7:28:00 PM	11/1/2023, 7:34:26 PM	Every Wednesday at 7:28 PM
Toggle Conflict Detection	0 0 1 0 0 1		10/31/2023, 5:37:42 PM	10/31/2023, 5:37:43 PM	

DEVICE	STATUS	DETAILS	START	END
	Done		10/31/2023, 5:37:42 PM	10/31/2023, 5:37:43 PM

You can reach the **Jobs** page two different ways:

- In the notifications tab when there is new Jobs notification, click the **Review** link. You will be redirected to the **Jobs** page and see the specific job represented by the notification.

View Jobs

Reconnecting... Started 1s ago

20 13 1 0 6 Review

1 Active Jobs 12 Background Tasks

The notifications tab displays status information about the job. This example shows the bulk action (Reconnect), the number of actions in the job (20), actions being processed (13), number of actions failed (1), number of warnings (0), and number of actions succeeded (6).

- From CDO's menu, select **Jobs**. This table shows a complete list of the bulk actions performed in CDO.

Search Jobs in CDO

When you're on the **Jobs** page, you can filter and search by different actions, the users who performed them, and the action status.

Reinitiate a Bulk Action

After reviewing the **Jobs** page, if one or more actions in a bulk action fail, you can retry the bulk action after making necessary corrections. CDO will re-run the job only for the failed actions. To re-run a bulk action:

-
- Step 1** Select the row in the jobs page that indicates a failed action.
- Step 2** Click  **Retry**.
-

Cancel a Bulk Action

You now have the ability to cancel any bulk actions that are currently in progress on multiple devices. For example, if you have tried to reconnect four managed devices and three of them have successfully reconnected, but the fourth device is still neither connected nor disconnected, you can cancel the bulk action.

To cancel a bulk action:

-
- Step 1** On the CDO navigation menu, click **Jobs**.
- Step 2** Identify the running bulk action and click the **Cancel** link on the right side.
-

If any part of the bulk action is successful, it cannot be undone. Any ongoing action will be cancelled.

Monitor Workflows in CDO

The Workflow page allows you to monitor every process that CDO runs when communicating with devices, Secure Device Connector (SDC), or Secure Event Connector (SEC), and when applying ruleset changes to devices. CDO creates an entry in the workflow table for every step and displays its outcome on this page. The entry contains information pertaining only to the action performed by CDO and not the device it is interacting with.

CDO reports an error when it fails to perform a task on a device, and you can navigate to the Workflows page to see the step where the error occurred for more details.

You can visit this page to determine and troubleshoot errors or share information with TAC when they insist.

To navigate to the Workflows page, on the **Inventory** page, click the **Devices** tab. Click the appropriate device type tab to locate the device and select the device you want. In the **Devices and Actions** in the right pane, click **Workflows**. The following picture shows the Workflow page with entries in the Workflow table.

Name	Priority	Condition	Current State	Last Active	Time
ftdOobDetectionStateMachine	Scheduled	Done	Done	12/4/2020, 2:17:16 PM	14:17:00.381 / 14:17:16.640

Export Device Workflows

You can download the complete workflow information to a JSON file and provide it when the TAC team asks for further analysis. To export this information, you can select the device and navigate to its Workflows page and click the export button  appearing on the top right corner.

Copy Stack Trace

If you have an error you cannot resolve, TAC may ask you for a copy of the stack trace. To collect the stack trace for the error, click the **Stack Trace** link and click **Copy Stacktrace** to copy the stacks appearing on the screen to a clipboard.
