set account enable

This command enables the OS user account that was disabled because of password inactivity.

Syntax Description	Parameters	Description			
	user-id	Specifies the user ID of the account that was disabled.			
Command Modes	Administrator (admin:)				
	Requiremen	ıts			
	Command p	privilege level: 4			
	Allowed du	ring upgrade: No			
	11	Unified Communications Manager, IM and Presence Servi Connection	ce on Unified Communications Manager,		

set account enable user-id

set account name

This command sets up a new account on the operating system.

set account name name

Syntax Description	Parameters	Description				
	name	Represents the username for the new account.				
	Enter a name comprised of only alphabets or characters comprised of alphanumeric cl (a-z, A-D, 0-9).					
		Note Umlaut characters are not supported.				
Command Modes	Administrat	or (admin:)				
Usage Guidelines	•	ter the username, the system prompts you to enter the privilege level (0 or 1) and password for ount. The privilege levels definitions are as follows:				
	Privilege le	Privilege level 0				
	Specifi level 0	es an ordinary privilege level. Users with ordinary privileges can run CLI commands with privilege only.				
	Privilege level 1					
	-	es an advanced privilege level. Users with advanced privileges can run CLI commands with ge level 1 and below.				
		The administrator account that the system creates during Unified Communications Manager installation h a privilege level of 4. The administrator can run all commands in the CLI.				
	The set acc	ount name command includes the following new prompts:				

- Anow this User to login to SAML SSO-enabled system through the Recovery URL ? (Yes / No) — Level 4 administrators can enable or disable the access to the recovery URL sign-in option for new platform administrators by typing 'Yes' or 'No' on the CLI. The value can be configured to 'Yes' if a user chooses to sign-in using the Recovery URL.
- 'To authenticate a platform login for SSO, a Unique Identifier (UID) must be provided that identifies this user to LDAP (such as sAMAccountName or UPN). Please enter the appropriate LDAP Unique Identifier (UID) for this user:[UID]' Level 4 administrator can type the unique identifier value for each platform administrator for this prompt.

 Note
 Only the Level 4 administrator has privileges to run all the CLI commands.

The administrator must ensure to perform the following tasks:

- Type either 'Yes' or 'No' for the 'Allow this User to login to SAML SSO-enabled system through Recovery URL ? (Yes / No)' prompt. If this prompt value is blank, an error message appears.
- Type a value for the 'To authenticate a platform login for SSO, a Unique Identifier (UID) must be provided that identifies this user to LDAP (such as sAMAccountName or UPN). Please enter the appropriate LDAP Unique Identifier (UID) for this user:[UID]' prompt. If the prompt value is duplicate, an error message appears. You can hit the Enter key and then, the user account name is saved by default. After the account is created successfully, the administrator will see the message Account created successfully. Log in to the CLI and update the password before you log in to OS Administration.
- In the case of SAML SSO login for Operating System Admin pages, if LDAP user consists of '&' character, make sure you create platform user without '&' and then map to LDAP user consisting of '&' character.
- In the case of SAML SSO login for Operating System Admin pages, if LDAP attribute value for User ID is telephonenumber, make sure you create platform user using consisting of alphanumeric characters or English alphabets only. Do not include platform user name with only numeric values. Then, map to the appropriate LDAP user having the UID value as telephone number.

Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, Cisco Unity Connection

set accountlocking

This command enables or disables account locking for the current administration accounts.

 set accountlocking {enable | disable}

 Syntax Description

 Parameters
 Description

 enable
 Enable account locking.

 disable
 Disable account locking.

Command Modes Administrator (admin:)

Usage Guidelines

Note After you run this command with **enable**, the system automatically enables account lockout notification after the system enables the audit logging function.

When the Administration account locking feature is enabled, and the user enters the wrong password more than the accountlocking count, the account gets locked for a set period. The message that the account is locked is only seen on the VM console and secure logs.

Requirements

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, Cisco Unity Connection

set accountlocking count

This command sets the global consecutive failed sign-in attempt count that triggers locking a user account.

Syntax Description	Parameters	Description			
	attempts	Represents the number of consecutive sign-in attempts before the system locks the account.			
		Value Range: 2-5			
		Default value: 3			
Command Modes	Administrator (admin:)				
Usage Guidelines	To change the global value for consecutive failed sign-in attempts before the system locks a user account, execute this command.				
		when account locking is enabled. If account locking is disabled, the system doe ocking value and uses the default value, 3, after you enable account locking.			
	Requirements				
	Command privilege level: 1				
	Allowed during upgrade: Yes				
	Applies to: Unified Communicati Cisco Unity Connection	ons Manager, IM and Presence Service on Unified Communications Manager,			

set accountlocking count attempts

set accountlocking unlocktime

disable

This command configures the unlock time for the current Unified Communications Manager admin accounts.

set accountlocking unlocktime seconds

Syntax Description	Pai	rameters	Description			
	sec	onds	Specifies the unlock time in seconds.			
			Value Range: 30-3600			
			Default value: 300			
	Note	• The account gets auto	matically unlocked only after the configured unlock time.			
			valid when account locking is enabled. If account locking is disabled, the system e account locking unlock time and uses the default value, 300, after you enable			
Command Modes	Adr	Administrator (admin:)				
	Req	Requirements				
	Con	Command privilege level: 0				
	Allo	Allowed during upgrade: No				
		Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, Cisco Unity Connection				
set accol	int s	sorecoveryu	rlaccess			
	This	s command enables or disab	les the SSO recovery URL access for platform administrators.			
-	Note		ministrator Level 4 has access to the recovery URL. If the platform administrator the recovery URL access for own self, an error appears.			
	set	account ssorecoveryurlacc	ess {enable disable}userid			
Syntax Description	Pai	rameters	Description			
	ena	able	Enable the recovery sign-in option for platform administrators.			

Disable the recovery sign-in option for platform administrators.

I

	Para	ameters	Description	
	userid		Specifies a particular Cisco Unified Operating System Administrator account.	
Command Modes	Adm	Administrator (admin:)		
Usage Guidelines				
	Note	• If you enable or disal	ble the recovery sign-in option, which is already enabled or disabled, an error appears	
			ccount that the system creates when Unified Communications Manager installs has 4. The administrator can run all commands in the CLI.	
	Requirements			
	Com	mand privilege level: 4		
	Allo	wed during upgrade: No		

set account ssouidvalue

This command updates the unique identifier value for the existing platform administrators.

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager

set account ssouidvalue userid

Syntax Description	Para	ameters	Description
	user	id	Specifies a particular Cisco Unified Operating System Administrator account whose unique identifier value needs to be updated.
Command Modes	Adm	inistrator (admin:)	
Usage Guidelines			
	Note		set account ssouidvalue userid command, a prompt appears to provide the UID value. s blank, then samaccountname is saved as ssouidvalue by default.
		• If a duplicate UID	value exists, an error appears.
	Requ	irements	

Command privilege level: 4

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager

set cert bulk consolidate

This command consolidates all the certificates that are available on the unit.

set cert bulk consolidate unit

Syntax Description	Parameters	Description	-
	unit	Represents the unit name.	-
Command Modes	Administrat	tor (admin:)	
Usage Guidelines	You must sj	pecify the SFTP server in	formation to use for cert bulk operations.
	Requireme	nts	
	Command J	privilege level: 1	
	Allowed du	iring upgrade: Yes	
		Unified Communications I Jnity Connection.	Manager, IM and Presence Service on Unified Communications Manager,
	Related Top set cer	bics t bulk sftp, on page 10	

set cert bulk export

This command exports all the certificates that are available on the unit.

set cert bulk export unit

Syntax Description	Parameters	Description
	export	Exports all the available certificates for this unit in this cluster to the preconfigured SFTP location.
	unit	Represents the unit name.
Command Modes	Administra	tor (admin:)
Usage Guidelines	You must s	pecify the SFTP server information to use for cert bulk operations.
	Requireme	nts
	Command	privilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

Example

```
admin:set cert bulk export all
Successfully exported tomcat certificate(s) to sftp server.
Successfully exported tftp certificate(s) to sftp server.
```

Related Topics

set cert bulk sftp, on page 10

set cert bulk import unit

set cert bulk import

This command imports the certificates that are in the SFTP location into the specified unit trust-store.

Syntax Description **Parameters Description** Represents the unit unit name. Administrator (admin:) **Command Modes** You must specify the SFTP server information to use for cert bulk operations. **Usage Guidelines** Requirements Command privilege level: 1 Allowed during upgrade: Yes Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection. **Example** admin:set cert bulk import all Successfully imported tomcat certificates.

Related Topics

set cert bulk sftp, on page 10

Successfully imported tftp certificates.

set cert bulk sftp

This command prompts for the SFTP server information to use for bulk operations.

	set cert bulk sftp
Command Modes	Administrator (admin:)
Usage Guidelines	You must specify the SFTP server information to use for cert bulk operations.
	Requirements
	Command privilege level: 1
	Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set cert default-ca-list disable

This command disables all or particular default CA certificates from all servers in the cluster.

When you try to execute this command, a warning message appears displaying that this operation disables all or particular default Cisco CA certificates.

set cert default-ca-list disable {all |common-name}

Note

 Please ensure that you are executing this command from the Unified Communications Manager publisher node.

• The default CA certificate names can be obtained by executing the show cert default-ca-list command.

Syntax Description	Parameters	Description			
	all Deletes all the default CA certificates from in the cluster.				
	common-name Deletes the particular default CA certificate from servers in the cluster.				
Command Modes	Administrator (admin:)				
Usage Guidelines	Consider the following information after you disable all the default CA certificates.				
	• Restart the "Cisco Tomcat", "Cisco CallManager", "Cisco Tftp", and "Cisco Certificate Authority Proxy Function" services.				
	Consider the following information after you disable the specific default CA certificate.				
	Restart the "Cisco CallManager", "Cisco Tftp", and "Cisco Certificate Authority Proxy Function" services.				
	• If you are disabling "VeriSign C Tomcat" service is sufficient.	Class 3 Secure Server CA - G3" certificate, then restarting of only "Cisco			

Requirements

Command privilege level: 1

Applies to: Unified Communications Manager

Example

admin:set cert default-ca-list disable all

WARNING: This operation will disable all Cisco CA certificates that have been installed by default. You can use the "show cert default-ca-list" to view the list of default Cisco CA certificates. You must restart the "Cisco Tomcat", "Cisco CallManager", "Cisco Tftp" and "Cisco Certificate Authority Proxy Function" services after running this command. This command should be run from the Publisher. Do you wish to proceed (yes|no)? **yes** Successfully disabled the default Cisco CA certificates. Please wait for a few min to UI to reflect the correct status.

admin:set cert default-ca-list disable common-name Enter the Common Name of Default CA Certificate : **CAP-RTP-001** WARNING: This operation will disable the "CAP-RTP-001" Cisco CA certificate. You must restart the "Cisco CallManager", "Cisco Certificate Authority Proxy Function" and "Cisco Tftp" services after running this command. This command should be run from the Publisher. Do you wish to proceed (yes|no)? **yes** Successfully disabled default "CAP-RTP-001" certificate.

admin:set cert default-ca-list disable common-name Enter the Common Name of Default CA Certificate : **VeriSign Class 3 Secure Server CA - G3** WARNING: This operation will disable the "VeriSign Class 3 Secure Server CA - G3" Cisco CA certificate. You must restart the "Cisco Tomcat" services after running this command. This command should be run from the Publisher. Do you wish to proceed (yes|no)? **yes** Successfully disabled default "VeriSign Class 3 Secure Server CA - G3" certificate.

admin:set cert default-ca-list enable common-name Enter the Common Name of Default CA Certificate : **capf** The capf certificate is not in the list of default Cisco CA certificates. admin:

set cert default-ca-list enable

This command enables all or particular default CA certificates except CAPF-trust on all servers in the cluster. CAPF-trust certificate enable only on the Unified Communications Manager publisher node not across the cluster.

When you try to execute this command, a warning message appears displaying that this operation enables all or particular default Cisco CA certificates as a trusted certificate.

```
set cert default-ca-list enable {all | common-name}
```

I

	Note	node.	 Please ensure that you are executing this command from the Unified Communications Manger publisher node. The default CA certificate names can be obtained by executing the show cert default-ca-list command. 			
Syntax Description	Para	imeters	Description			
	all		Enables all the default CA certificates on all servers in the cluster.			
	common-name		Enables the particular default CA certificate on all servers in the cluster.			
Command Modes	Adm	inistrator (admin:)				
Usage Guidelines	Cons	ider the following information	after you enable all the default CA certificates.			
	• Restart the "Cisco Tomcat", "Cisco CallManager", "Cisco Tftp", and "Cisco Certificate Authority Proxy Function" services.

	Example					
	admiı	admin:set cert default-ca-list enable all				
	WARNING: This operation will enable all default Cisco CA certificates as trusted certificates for all nodes in this cluster. You can use the "show cert default-ca-list" to view the list of default Cisco CA certificates. You must restart the "Cisco Tomcat", "Cisco CallManager", "Cisco Tftp" and "Cisco Certificate Authority Proxy Function" services after running this command. This command should be run from the Publisher. Do you wish to proceed (yes no)? yes Successfully enabled the default Cisco CA certificates. Please wait for a few minutes for the UI to reflect the correct status.					
	Ente: WARN for a	ING: This operation will i all nodes in this cluster.	: enable common-name alt CA Certificate : CAP-RTP-002 nstall the "CAP-RTP-002" certificate as a trusted certificate You must restart the "Cisco CallManager", Proxy Function" and "Cisco Tftp" services after running this			

command. This command should be run from the Publisher. Do you wish to proceed (yes|no)? yes Successfully enabled default "CAP-RTP-002" certificate.

admin:set cert default-ca-list enable common-name Enter the Common Name of Default CA Certificate : **VeriSign Class 3 Secure Server CA - G3** WARNING: This operation will install the "VeriSign Class 3 Secure Server CA - G3" certificate as a trusted certificate for all nodes in this cluster. You must restart the "Cisco Tomcat" services after running this command. This command should be run from the Publisher. Do you wish to proceed (yes|no)? **yes** Successfully enabled default "VeriSign Class 3 Secure Server CA - G3" certificate.

```
admin:set cert default-ca-list enable common-name
Enter the Common Name of Default CA Certificate : CAP-RTP-003
The CAP-RTP-003 certificate is not in the list of default Cisco CA certificates.
admin:
```

set cert delete

This command deletes a specific certificate file from the trust unit.

set cert delete unit name

Syntax Description	Parameters	Description		
	<i>unit</i> Specifies the name of the trust category, as "own" or "trust".			
	name	Certificate file name.		
Command Modes	Administra	tor (admin:)		
	Requireme	nts		
	Command J	privilege level: 1		
	Allowed du	ring upgrade: Yes		
	11	Unified Communications Manager, IM and Presence Service on Unified Communications Manage Jnity Connection.		
	Example			
	admin:set	cert delete cucm siptest.pem		

set cert import

This command imports the specified certificate for the specified certificate type.

set cert import type name [caCert]

Syntax Description	Parameters	Description
	type	Specifies the certificate type as "own" or "trust".
	name	Represents the unit name.
	[caCert]	Represents the name of the CA certificate file name.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

Example

```
admin:set cert import trust tomcat
Successfully imported certificate for tomcat.
Please restart services related to tomcat for the new certificate to
become active.
```

set cert regen

This command regenerates the certificate for the specified unit.

Syntax Description	Parameters	Description
	name	Represents the unit
		name.

set cert regen name

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

Example

```
admin:set cert regen tomcat
Successfully regenerated certificate for tomcat.
```

set cert regen ITLRecovery

This command regenerates the ITLRecovery certificate for the specified unit.

After you type this command, a warning message appears displaying that if you are using a tokenless CTL and if the you are regenerating the CallManager certificate, ensure that the CTL file has the updated CallManager certificate and that certificate is updated to endpoints. To regenerate the certificate, type **yes** or else type **no**.

set cert regen ITLRecovery

Syntax Description	Parameters	Description
	ITLRecovery	Represents the ITLRecovery certificate.

Command Modes Administrator (admin:)

Requirements

∕!∖

Caution

• You must restart the services related to ITLRecovery for the regenerated certificates to become active.

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

Example

admin:set cert regen ITLRecovery

WARNING: If you are using a tokenless CTL and if the CallManager certificate is recently generated, please ensure that the CTL File already has the new CallManager certificate and is

updated to the endpoints, before generating the ITL Recovery certificate. Are you sure want

to proceed?

Proceed with regeneration (yes|no)? yes

Successfully Regenerated Certificate for ITLRecovery.

You must restart the services related to ITLRecovery for the regenerated certificates to become active.

set cli pagination

For the current CLI session, this command turns automatic pagination On or Off.

Syntax Description	Parameters	Description	-
	on	Turns pagination on.	-
	off	Turns pagination off.	-
Command Modes	Administra	tor (admin:)	-
	Requireme	nts	
	Command	privilege level: 1	
	Allowed du	ring upgrade: No	
		Unified Communicati Jnity Connection.	ons Manager, IM and Presence Service on Unified Communications Manager,

set cli pagination $\{on \mid off\}$

admin:set cli pagination off Automatic pagination is turned off

set cli session timeout minutes

set cli session timeout

This command sets the time, in minutes, after which an active CLI session times out and disconnects.

Syntax Description	Parameters	Description
		Specifies the time, in minutes, that can elapse before an active CLI session times out and disconnects.
		Value range: 5-99999 minutes
		• Default value: 30 minutes
Command Modes	Administrate	or (admin:)
Usage Guidelines	active sessio	at the new session timeout value becomes effective immediately for a new CLI session; however, ons retain their original timeout value. Also the show cli session timeout command reflects the even if the current session does not use that value.
_		

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set commandcount

This command changes the CLI command prompt, so it displays how many CLI commands have executed.

Syntax Description	Parameters	Description	
	enable	Turns on command count.	
	disable	Turns off command count.	
Command Modes	Administra	tor (admin:)	
	Requireme	nts	
	Command J	privilege level: 1	
	Allowed du	ring upgrade: No	
		Unified Communications M Jnity Connection.	anager, IM and Presence Service on Unified Communications Manag

set csr gen

This command generates the csr for the unit name.

set csr gen name

Syntax Description	Parameters	Parameters Description	
	name	Specifies the unit on which the certificate is generated.	
Command Modes	Administra	tor (admin:)	
	Requirements		
	Applies to:	Unified Communications Manager, IM and Presence Service	

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

L

Example

admin:set csr gen tomcat Successfully Generated CSR for tomcat.

Requirements

Command privilege level: 1

Allowed during upgrade: No

set cuc jetty stderrlog

This command enables or disables the error log getting generated while any standard error occurs during communicating with the Jetty server. This error log gets generated and is available at the path /var/log/active/jetty/.

set cuc jetty stderrlog {enable | disable}

Syntax Description	Parameters	Description
	enable	Enables the error log on the Jetty server. Be aware that enable is case sensitive.
	disable	Disables the error log on the Jetty server. Be aware that disable is case sensitive.
Command Modes	Administrator (admin:)	
Usage Guidelines Cau	Image: Markow with the services after enabling or dimensional services after enabling or dimensi services after enabling or dimensional services after	sabling the error log on the Jetty server.
	Requirements	
	Command privilege level: 0	
	Allowed during upgrade: No	
	Applies to: Cisco Unity Connection only.	
	Enable Error Log on Jetty Server Example	
	admin:set cuc jetty stderrlog enable	
	Command is executed successfully To effect changes restart jetty server	

Restart Jetty Server through Unity Connection Serviciabilty .

Go to Tools -> Service Management -> Restart Connection Jetty Service. Check the logs that should not be generated after running above command. Check the requestlog by sending one voice message through webinbox. Notifications should not come in logs

set cuc jetty stdoutlog

This command enables or disables the standard input and output log getting generated while communicating with Jetty server. This standard input and output log gets generated and is available at the path /var/log/active/jetty/.

set cuc jetty stdoutlog {enable | disable}

Syntax Description	Parameters	Description
	enable	Enables the standard input and output log on the Jetty server. Be aware that enable is case sensitive.
	disable	Disables the standard input and output log on the Jetty server. Be aware that disable is case sensitive.

Command Modes Administrator (admin:)

Usage Guidelines

<u>/!\</u>

Caution You must restart the Jetty services after enabling or disabling the standard input and output log on the Jetty server.

Requirements

Command privilege level: 0

Allowed during upgrade: No

Applies to: Cisco Unity Connection only.

Enable Standard Input and Output Log on Jetty Server Example

```
admin:set cuc jetty stdoutlog enable
```

Command is executed successfully To effect changes restart jetty server Restart Jetty Server through Unity Connection Serviciabilty . Go to Tools -> Service Management -> Restart Connection Jetty Service. Check the logs that should not be generated after running above command. Check the requestlog by sending one voice message through webinbox. Notifications should not come in logs

set cuc jetty requestlog

This command enables or disables the request log getting generated from the Jetty server while any request is raised for notifications. This request log gets generated and is available at the path /usr/local/jetty/logs/.

set cuc jetty requestlog {enable | disable}

Syntax Description	Parameters	Description
-	enable	Enables the request log on the Jetty server. Be aware that "enable" is case sensitive.
	disable	Disables the request log on the Jetty server. Be aware that "disable" is case sensitive.
Command Modes	Administrator (admin:)	
Usage Guidelines	·	
Cau	tion You must restart the Jetty services at	fter enabling or disabling the request log on the Jetty server.
	Requirements	

Command privilege level: 0

Allowed during upgrade: No

Applies to: Cisco Unity Connection only.

Enable Request Log on Jetty Server Example

admin:set cuc jetty requestlog enable Command is executed successfully To effect changes restart jetty server Restart Jetty Server through Unity Connection Serviciabilty . Go to Tools -> Service Management -> Restart Connection Jetty Service. Check the logs that should not be generated after running above command. Check the requestlog by sending one voice message through webinbox. Notifications should not come in logs

set cuc speechview registration certificate size

This command sets up new certificate bit size for Speech to Text service registration and Voicemail transcription with Nuance server.

set cuc speechview registration certificate size bit_size

Syntax Description	Parameters	Description
	bit_size	Specifies the bit_size of certificate. Its allowed values are 1k, 2k or 4k.
Command Modes	Administrator (admin:)	
Usage Guidelines	To set the desired certificate bit size, use the set cuc Connection Only) command. The CLI must be exect SpeechView Processor service.	speechview registration certificate size (Cisco Unity uted on the publisher. It will restart the Connection
	Requirements	
	Command privilege level: 4	

set cuc srsv timeout

This command sets the value for SRSV session timeout.

set cuc srsv timeout timeout_value

Syntax Description	Parameters	Description	
	timeout_value	Sets the time for session logout.	
Command Modes	Administrator (admin:)		
	Requirements		
	Command pri-	vilege level: 1	
	Allowed durin	ig upgrade: No	
	Applies to: Ci	sco Unity Connection	

set cuc trace

This command enables or disables the specified traces and trace levels.

set cuc trace {enable | disable} trace_name level

Syntax I	Description	
----------	-------------	--

 Parameters
 Description

 enable
 Enables Connection traces.

 disable
 Disables Connection traces.

 trace_name
 Specifies the name of the trace to enable or disable. Be aware that trace names are case sensitive.

	Parameters Description		
	<i>level</i> Specifies the level or levels of trace_name that you want to enable or disable. Each trace comprise up to 31 levels, numbered 0 to 30; each level provides a different type of information for the specified trace. When you enable or disable multiple levels, use a comma to separate levels are a hyphen to indicate a range of levels. Do not include spaces.		
Command Modes	Administrator (admin:)		
Usage Guidelines	To display a list of the traces and trace levels that are currently enabled, use the show cuc trace levels (Cis Unity Connection Only) command.		
	Requirements		
	Command privilege level: 1		
	Allowed during upgrade: No		
	Applies to: Cisco Unity Connection only.		
	Enable VUI Traces 1, 13, and 17 Through 20 Example		
	admin:set cuc trace enable VUI 1,13,17-20 VUI trace levels are now set to: 1,13,17-20		
	Disable VUI Traces 17 Through 20 While VUI Trace Levels 1 and 13 Remain Set Example		
	admin:set cuc trace disable VUI 17-20 VUI trace levels are now set to: 1,13		
	Related Topics		
	show cuc trace levels		

This command changes the time and date on the server.

set date HH:mm:ss:MM/DD/YY

Syntax Description	Parameters	Descripti	on
	HH:mm:ss	nm:ss Represents the time format (24 hours form	
	MM/DD/YY	Y Represents the date format.	
		Note	Date format MM/DD/YYYY is also accepted.

Command Modes Admin

Administrator (admin:)

Usage Guidelines If the server is configured to synchronize with external NTP servers, this command requires the user to remove all of those NTP servers.

Requirements

Applies to: Unified Communications Manager and Cisco Unity Connection.

Set Date and Time to 2:10:33 Pm April 13th 2012 Example

admin:set date 14:10:33:04/13/12

Requirements

Command privilege level: 1

Allowed during upgrade: No

set dscp defaults

This command sets the factory default DSCP settings for all of the port tags.

	set dscp defaults
Command Modes	Administrator (admin:)
Usage Guidelines	All non-default DSCP settings get removed after you run this command.
	You can use the command show dscp defaults to see the factory default DSCP settings.
	Requirements
	Command privilege level: 1
	Allowed during upgrade: No
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set dscp

This command enables or disables DSCP marking on outgoing TCP or UDP packets. You can enable or disable DSCP on a single port tag, or on all port tags at once.

set dscp {enable | disable} {allport_tag}

Syntax Description	Parameters	Description
	all	Disables all DSCP port tags.

	Parameters	Description
	port_tag	Represents a DSCP port tag, which is a string that is mapped to a TCP or UDP port to identify the application that uses the port. This value is for the portTag field displayed when you use the command show dscp defaults . The set of port tags is predefined.
Command Modes	Administrator (admin:)	
	Requireme	nts
	Command J	privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set dscp marking

This command sets DSCP markings on port tags by using well-known DSCP classes and numeric values.

set dscp marking port_tag value

Syntax Description	Parameters	Description	
	port_tag	Represents a DSCP port tag, which is a string that is mapped to a TCP or UDP port to identify the application that uses the port. This value is for the portTag field displayed when you use the command show dscp defaults . The set of port tags is predefined.	
	value	A DSCP value. You can enter the name of a well-known DSCP class or a numeric value in decimal or hexadecimal format. Precede hexadecimal values with 0x or 0X.	
Command Modes	Administra	tor (admin:)	
Usage Guidelines	The valid c	elass names as defined by DSCP are:	
	Class Selector: values CS0, CS1, CS2, CS3, CS5, CS6, CS7		
	The cl Preced	lass selector (CS) values correspond to IP Precedence values and are fully compatible with IP dence.	
	• Exped	lited Forwarding: value EF	
		IB is ideally suited for applications such as VoIP that require low bandwidth, guaranteed bandwidth, elay, and low jitter.	
	• Best E	Effort: value BE	
	Also c	called default PHB, this value essentially specifies that a packet be marked with 0x00, which gets	
	the tra	ditional best-effort service from the network router.	
	• Assure	ed Forwarding: values AF11, AF12, AF13, AF21, AF22, AF23, AF41, AF42, AF43	
	There	are four types of Assured Forwarding classes, each of which has three drop precedence values.	

These precedence values define the order in which a packet is dropped (if needed) due to network congestion. For example, packets in AF13 class are dropped before packets in the AF12 class.

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set ipsec policy_group

This command enables ipsec policies with the specified policy group name.

set ipsec policy_group {ALLgroup}

Syntax Description	Parameters	Description
	ALL	Enables all ipsec policy groups.
	group	Specifies the name of a particular ipsec policy group to enable.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager and Cisco Unity Connection.

set ipsec policy_name

This command enables the specified IPSec policy.

set ipsec policy_name { policy_group policy_name }

Syntax Description	Parameters	Description
	policy_group	Specifies the name of a particular ipsec policy group to enable.
	policy_name	Specifies the name of a particular ipsec policy to enable.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager and Cisco Unity Connection.

set key regen authz encryption

Run this command on the Unified Communications Manager publisher node to regenerate the symmetric encryption key that encrypts OAuth access tokens and refresh tokens that are used in Cisco Jabber authentication.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: Unified Communications Manager and the IM and Presence Service.

set key regen authz signing

Run this command on the Unified Communications Manager publisher node to regenerate the asymmetric RSA key pair for signing the OAuth access tokens and refresh tokens that are used in Cisco Jabber authentication.

Command Modes Administrator (admin:)

Usage Guidelines Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: Unified Communications Manager and the IM and Presence Service.

set logging

This command allows you to enable or disable CLI Admin logs.

set logging {enable | disable}

Syntax DescriptionParametersDescriptionenableTurns on logging.

	Parameters	Description
	disable	Turns off logging.
Command Modes	- Administrat	or (admin:)
	Requiremen	its
	Command p	orivilege level: 0

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set Login Grace Timeout

This command allows you to configure the LoginGraceTimeout value to the mentioned value.

set Login Grace Timeout LoginGraceTimeout value

Syntax Description	Parameters Description
	LoginGraceTimeout value Sets the LoginGraceTimeout value for login grace timeout.
Command Modes	Administrator (admin:)
	Requirements
	Command privilege level: 1
	Allowed during upgrade: Yes
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager and Cisco Unity Connection.

set network cluster publisher

This command sets the network cluster publisher hostname and IP address.

set network cluster publisher {hostname | ip} name

Syntax Description	Parameters	Description
	hostname	Specifies the hostname of the network cluster.
	ір	Specifies the ip address of the network cluster.

L

	Parameters	Description
	name	Hostname or IP address to assign to the network cluster publisher.
Command Modes	Administrator (admin:)	
	Requirements	
	Command privilege level: 1	
	Allowed during upgrade: Yes	
	A main for the Control of the Manna Manna the	

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network cluster subscriber details

Use this command to add subscriber to the processnode or appserver table when Tomcat Webserver is server down and GUI is inaccessible.

set network cluster subscriber details	servertype hostname i	p domainname
--	-----------------------	--------------

Syntax Description	Parameter	Description
	servertype	Choose one of these products for this parameter— Unified Communications Manager, IM and Presence Service, and Cisco Unity Connection. This field is mandatory.
	hostname	The hostname of the node that you add to the cluster. The hostname is supported on the same domain. This field is mandatory.
	ip	The IPv4 address of the node that you add to the cluster. This field is mandatory for IM and Presence publisher and Cisco Unity Connection.
	domainname	The domain name of the IM and Presence Service publisher. This field is mandatory for IM and Presence publisher.

Command Modes

Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to Unified Communications Manager, IM and Presence Service, and Cisco Unity Connection

set network cluster subscriber dynamic-cluster-configuration

Use this command to enable the Dynamic Cluster Configuration on the publisher. Use this command to specify the duration in which you can add subscriber nodes to the publisher server table. The addition of subscriber nodes is authenticated immediately and those nodes need not wait for the publisher details during the installation of the subscriber nodes.

set network cluster subscriber dynamic-cluster-configuration {default | no. of hours}

Syntax Description	Parameter	Description
	default	Enables the Dynamic Cluster Configuration for 24 hours.
	no. of hours	Specifies a value from 1 to 24 hours.

Command Modes Administrator (admin)

Requirements

Applies to Unified Communications Manager, IM and Presence Service, and Cisco Unity Connection

set network dhcp eth0

This command enables or disables DHCP for Ethernet interface 0. You cannot configure Ethernet interface 1.

set network dhcp eth0 {enable | disable } {node_ipnet_maskgateway_ip }

Syntax Description	Parameters	Description
	eth0	Specifies Ethernet interface 0.
	enable	This enables DHCP.
	disable	This disables DHCP.
	node_ip	Represents the static IP address for the server.
	net_mask	Represents the subnet mask for the server.
	gateway_ip	Represents the IP address of the default gateway.

Command Modes Administrator (admin:)

L

Usage Guidelines

If you continue, this command causes the system to restart. We also recommend that you restart all nodes whenever any IP address gets changed.

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network dns

This command sets the IP address for the primary or secondary DNS server.

set network dns {primary | secondary} addr

Syntax Description	Parameters	Description			
	primary				
	secondary				
	addr	Represents the IP address of the primary or secondary DNS server.			
Command Modes	Administrator (admin:)				
	Requirements				
	Command privilege level: 1				
	Allowed during upgrade: No				
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.				
-	Note If you change the IP address for the DNS servers, you CLI command.	must reboot the server through the utils system restart			

set network dns options

This command sets DNS options.

Syntax Description	Parameters Description				
	timeout Sets the DNS timeout.				
	attempts Sets the number of times to attempt a DNS request.				
	rotate Causes the system to rotate among the configured DNS servers and distribute the load.				
	seconds Specifies the DNS timeout period in seconds.				
	<i>number</i> Specifies the number of attempts.				
Usage Guidelines	Running this command causes an automatic system restart.				
Command Modes	Administrator (admin:)				
	Requirements				
	Command privilege level: 0				
	Allowed during upgrade: Yes				
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications M				

set network dns options [{timeoutseconds}] [{attemptsnumber}] [{rotate}]

set network domain

This command sets the domain name for the system.

and Cisco Unity Connection.

Note Changing the domain name triggers an automatic regeneration of all Unified Communications Manager certificates, including any third party signed certificates that have been uploaded. After the server reboots automatically, phones running in secure (mixed) mode cannot connect to the server until after the CTL client updates the new CTL file to the phones.

Note Reboot the servers one at a time in order for the phones to register correctly. For more information about changing the domain name, see *Changing the IP Address and Hostname for Cisco Unified Communications Manager*.

set network domain [domain-name]

Syntax Description	Parameters	Description	
	domain_name	Represents the system domain that you want to assign.	

 Command Modes
 Administrator (admin:)

 Usage Guidelines
 The system asks whether you want to continue to execute this command.

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network failover

This command enables and disables Network Fault Tolerance on the Media Convergence Server network interface card.

set network failover {ena | dis}

Syntax Description	Paramete	ers Description	
	ena	Enables Network Fault Tolerance.	
	dis	Disables Network Fault Tolerance.	
Command Modes	Adminis	trator (admin:)	
	Requiren	nents	
	Commar	nd privilege level: 1	
	Allowed during upgrade: No		
		to: Unified Communications Manager, I to Unity Connection.	M and Presence Service on Unified Communications Manage

set network gateway

This command enables you to configure the IP address of the network gateway.

set network gateway addr

Syntax Description	Parameters	Description	
	addr	Represents the IP address of the network gateway that you want to assign.	

 Command Modes
 Administrator (admin:)

 Usage Guidelines
 The system asks whether you want to continue to execute this command.

• ··

Caution If you continue, this command causes the system to restart.

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network hostname

This command allows an administrator to set the network host name, change the IP address of the node, and restart the system.

Before attempting this command, the administrator should have a valid DRF backup. Additionally, before attempting a Hostname (or Hostname and IP address) change, the administrator should perform the following:

- verify the cluster configuration does not have any configuration problems by executing **show hcs cluster verify detailed**
- update the cluster configuration by executing set hcs cluster config
- validate the cluster configuration by executing show hcs cluster verify detailed

set network hostname hostname

Syntax Description	Parameters	Descriptio)n	
	<i>hostname</i> Represents the new network hostname of the system.			
		Note	The host name must follow the rules for ARPANET host names. It must start with an alphabetic character, end with an alphanumeric character, and consist of alphanumeric characters and hyphens. The host name can have a maximum length of 63 characters.	
Command Modes	Administrat	tor (admin:)		
Usage Guidelines	The system	asks wheth	er you want to continue to execute this command.	
	Â			
	aution If you	antines 1	is command causes the system to restart.	

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

Example

admin:set network hostname

```
WARNING: Changing this setting will invalidate software license
on this server. The license will have to be re-hosted.
Continue(y/n):
Continue (y/n)?y
ctrl-c: To quit the input.
*** W A R N I N G ***
Do not close this window without first canceling the command.
This command will automatically restart system services.
The command should not be issued during normal operating
hours.
_____
Note: Please verify that the new hostname is a unique
name across the cluster and, if DNS services are
utilized, any DNS configuration is completed
before proceeding.
              _____
Security Warning : This operation will regenerate
all CUCM Certificates including any third party
signed Certificates that have been uploaded.
Enter the hostname:: app-lfwelty5
Would you like to change the network ip address at this time [yes]::
Warning: Do not close this window until command finishes.
ctrl-c: To quit the input.
* * *
    WARNING ***
_____
Note: Please verify that the new ip address is unique
     across the cluster.
Note: Changing the IP address will automatically restart
      system services cluster wide.
Note: The command should not be issued during normal operating hours.
_____
```

Note

The administrator can change both the hostname and IP address by responding **yes**. To change just the hostname, respond **no**.

set network ip eth0

This command sets the IP address for Ethernet interface 0. You cannot configure Ethernet interface 1.

Before attempting this command, the administrator should have a valid DRF backup. Also, before attempting an IP address change, the administrator should perform the following:

- verify that the cluster configuration does not have any configuration problems by executing **show hcs cluster verify detailed**
- update the cluster configuration by executing set hcs cluster config
- validate the cluster configuration by executing show hcs cluster verify detailed

Syntax Description	Parameters	Description
	eth0	Specifies Ethernet interface 0.
	addr	Represents the IP address that you want to assign.
	mask	Represents the IP mask that you want to assign.
	gw	Represents the IP default GW that you want to assign.
Command Modes	Administrator (admin:)	
Usage Guidelines	The system asks whether you want to continue to exe	ecute this command.
	\triangle	
Ca	ution If you continue, this command restarts the follo	wing services:
	• NIC driver	
	• NTP	
	• CLM	
	Service Manager	

set network ip eth0 addr mask gw

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

Example

set network ipv6 dhcp

This command sets the DHCPv6 client on the server and enables IPv6 support. For changes to take effect, you must restart the server.

set network ipv6 dhcp {enable | disable} [reboot]

Syntax Description	Parameters	Description			
	dhcp	Sets the DHCPv6 client on the server. By default, the server does not restart after you enable the DHCPv6 client. For your changes to take effect, you must restart the server by either entering the reboot parameter or manually restarting the server.			
	enable Enables IPv6 support.				
	disable Disables IPv6 support.				
	reboot	(Optional) Causes the server to automatically restart after you enter the command.			
Command Modes	Administrat	or (admin:)			
	Requiremen	its			
	Command privilege level: 1				
	Allowed during upgrade: No				
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.				

set network ipv6 gateway

This command sets the IPv6 gateway for the server. For changes to take effect, you must restart the server.

set network ipv6 gateway addr [reboot]

 Syntax Description
 Parameters
 Description

 gateway
 Sets the IPv6 gateway for the server. By default, the server does not restart after you set the IPv6 gateway for the server. For your changes to take effect, you must restart the server by either entering the reboot parameter or manually restarting the server.

 addr
 The IPv6 gateway address.

 reboot
 (Optional) Causes the server to automatically restart after you enter the command.

 Command Modes
 Administrator (admin:)

 Requirements
 Command privilege level: 1

 Allowed during upgrade: No
 No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network ipv6 service

This command enables or disables the IPv6 service on the server. For changes to take effect, you must restart the server.

set network ipv6 service {enable | disable} [reboot]

Syntax Description	Parameters	Description
	service	Sets the IPv6 service on the server. By default, the server does not restart after you enable or disable the IPv6 service on the server. For your changes to take effect, you must restart the server by either entering the reboot parameter or manually restarting the server.
	enable	Enables IPv6 service on the server.
	disable	Disables IPv6 service on the server.
	reboot	(Optional) Causes the server to automatically restart after you enter the command.
Command Modes	Administrat	or (admin:)

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network ipv6 static_address

This command assigns the static IPv6 address to the server. For changes to take effect, you must restart the server.

set network ipv6 static_address addr mask [reboot]

Syntax Description	Parameters	Description
	static_address	Assigns a static IPv6 address to the server. By default, the server does not restart after you assign the static IPv6 address. For your changes to take effect, you must restart the server by either entering the reboot parameter or manually restarting the server.
	addr	Specifies the static IPv6 address you assign to the server.
	mask	Specifies the IPv6 network mask (0-128).
	reboot	(Optional) Causes the server to automatically restart after you enter the command.
Command Modes	Administrator (admin:)
	Requirements	

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network max_ip_conntrack

This command sets the ip_conntrack_max value.

set network max_ip_conntrack *ip_conntrack_max value*

Syntax Description	Parameters	Description	1
	ip_conntrack_max value	Specifies th	ne value for ip_conntrack_max.
		Note	The value of ip_conntrack_max cannot be less than 65536.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

Example

admin:set network max_ip_conntrack 65536

set network mtu

This command sets the maximum MTU value.

set network mtu mtu_max

Syntax Description	Parameters	Descriptio	n		
	mtu_max	Specifies t	pecifies the maximum MTU value. The system default MTU value equals 1500.		
		Caution	When packets on UDP port 8500 that have the DF bit set are exchanged between nodes, if there is any policy on the WAN router to clear the DF bit and fragment large packets, this may cause dbreplication issues.		
Command Modes	Administrat	or (admin:)			
Usage Guidelines	The system	asks wheth	er you want to continue to execute this command.		
	Â				
Ca	ution If you	continue, th	e system loses network connectivity temporarily.		
	Requiremen	its			
	Command p	orivilege lev	vel: 1		
	Allowed du	ring upgrad	e: No		
	Applies to: U and Cisco U		nmunications Manager, IM and Presence Service on Unified Communications Manager, action.		

Example

```
admin:set network mtu 576 W A R N I N G
This will cause the system to temporarily lose network connectivity
Do you want to continue ?
Enter "yes" to continue or any other key to abort
```

L

yes executing...

set network name-service hosts cache-enable

This command enables the nscd related cache.

set network name-service hosts cache-enable value

Syntax Description	Parameters Description		
	value	The boolean value must be either yes or no.	
	Administrator (admin:)		
	Requiremer	Its	
	Command p	privilege level: 1	
	Allowed du	ring upgrade: Yes	
	Applies to: U	Unified Communications Manager, IM and Prese	

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network name-service hosts max-db-size

This command sets the maximum allowed size for a service.

set network name-service hosts max-db-size value

Syntax Description	Parameters Description
	<i>value</i> Enter the number of bytes for the database size.
Command Modes	Administrator (admin:)
	Requirements
	Command privilege level: 1
	Allowed during upgrade: Yes
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network name-service hosts negative-time-to-live

This command sets the time-to-live (TTL) for negative entries or unsuccessful queries in the specified cache for service. So, using this command improves the performance if there are various files owned by user IDs (UIDs) and are unavailable in system databases. For example, files that are available in the Linux kernel sources as root. To reduce the cache coherency problems, the number of such files should be kept to the minimum.

set network name-service hosts negative-time-to-live value

Syntax Description	Parameters Description			
	<i>value</i> Enter the number of seconds.			
	Administrator (admin:)			
	Requirements			
	Command privilege level: 1			
	Allowed during upgrade: Yes			
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manage and Cisco Unity Connection.			

set network name-service hosts persistent

This command retains the content of the cache for service over server restarts. This command is useful when *paranoia* mode is configured.

	set network name-service hosts persistent value	
Syntax Description	Parameters Description	
	<i>value</i> Enter a value for a service.	
Command Modes	Administrator (admin:)	
	Requirements	
	Command privilege level: 1	
	Allowed during upgrade: Yes	
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.	

set network name-service hosts persistent value

set network name-service hosts positive-time-to-live

This command sets the time-to-live (TTL) for positive entries or successful queries in the specified cache for service. Configure the value in seconds. Larger values increase cache hit rates and reduce mean response times. However, such values increase problems with cache coherence.

set network name-service hosts positive-time-to-live value

Syntax Description	Parameters	Description	
	value	Enter the number of seconds.	

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network name-service hosts suggested-size

This command changes the internal hash table size.

set network name-service hosts suggested-size value

Syntax Description	Parameters Description			
	<i>value</i> Enter a prime number for optimum efficiency.			
Command Modes	Administrator (admin:)			
	Requirements			
	Command privilege level: 1			
	Allowed during upgrade: Yes			
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.			

set network name-service services cache-enable

This command enables the nscd related cache.

set network name-service services cache-enable value

Syntax Description	Parameters Description	
	value	The boolean value must be either <i>yes</i> or <i>no</i> .
Command Modes	Administrator (admin:)	
	Requiremen	its
	Command privilege level: 1	
	Allowed du	ring upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network name-service services max-db-size

This command sets the maximum allowed size for the service.

set network name-service services max-db-size value

Syntax Description	Parameters Description
	<i>value</i> Enter the value in number of bytes.
Command Modes	Administrator (admin:)
	Requirements
	Command privilege level: 1
	Allowed during upgrade: Yes
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network name-service services negative-time-to-live

This command sets the time-to-live (TTL) for negative entries or unsuccessful queries in the specified cache for service. So, using this command improves the performance if there are various files owned by user IDs (UIDs) and are unavailable in system databases. For example, files that are available in the Linux kernel sources as root. To reduce the cache coherency problems, the number of such files should be kept to the minimum.

set network name-service services negative-time-to-live value

Syntax Description	Parameters Description		
	value	Enter a prime number for optimum efficiency.	
Command Modes	Administrat	tor (admin:)	
	Requiremer	nts	
	Command p	privilege level: 1	
	Allowed du	ring upgrade: Yes	

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network name-service services persistent

This command retains the content of the cache for service over server restarts. This command is useful when *paranoia* mode is configured.

set network name-service services persistent value

Syntax Description	Parameters Description
	<i>value</i> Enter a value for a service.
Command Modes	Administrator (admin:)
	Requirements
	Command privilege level: 1
	Allowed during upgrade: Yes
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manag and Cisco Unity Connection.

set network name-service services positive-time-to-live

This command sets the time-to-live (TTL) for positive entries or successful queries in the specified cache for service. If you enter a large value for this command, it increases cache hit rates and reduces mean response times. However, a large value increases issues with cache coherence.

set network name-service services positive-time-to-live value

Syntax Description	Parameters	Description
	value	Enter the number of seconds.
Command Modes	Administrat	or (admin:)

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network name-service services suggested-size

This command sets the internal hash table size.

set network name-service services suggested-size value

Syntax Description	Parameters Description
	<i>value</i> Enter a prime number for optimum efficiency.
Command Modes	Administrator (admin:)
	Requirements
	Command privilege level: 1
	Allowed during upgrade: Yes
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network nic eth0

This command sets the properties of the Ethernet Interface 0. You cannot configure Ethernet interface 1.

```
set network nic eth0 {auto | {en | dis}} {speed | {10 | 100}} {duplex half | {half | full}}
```

Syntax Description	Parameters	Description
	eth0	Specifies Ethernet interface 0.
	auto	Specifies whether auto negotiation gets enabled or disabled.
	speed	Specifies whether the speed of the Ethernet connection: 10 or 100 Mb/s.
	duplex	Specifies half-duplex or full-duplex.

Command Modes Administrator (admin:)

 Usage Guidelines
 The system asks whether you want to continue to execute this command.

 Note
 You can enable only one active NIC at a time.

 Image: Caution
 If you continue, this command causes a temporary loss of network connections while the NIC gets reset.

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network ntp option

This command adds the *noquery* option to the /etc/config file.

set network ntp option

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network pmtud state

This command enables and disables Path MTU Discovery.

set network pmtud state {enable | disable}

Syntax Description	Parameters	Description
	enable	Enables Path MTU Discovery.
	disable	Disables Path MTU Discovery.

Command Modes Administrator (admin:)

Usage Guidelines The system asks whether you want to continue to execute this command.

Â

Caution If you continue, the system loses network connectivity temporarily.

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

Example

```
admin:set network pmtud state enable W A R N I N G
This will cause the system to temporarily lose network connectivity
    Do you want to continue ?
Enter "yes" to continue or any other key to abort
yes
executing...
```

set network restore

This command configures the specified Ethernet port to use a specified static IP address.

set network restore eth0 ip-address network-mask gateway

Syntax Description	Parameters	Description
	eth0	Specifies Ethernet interface 0.
	ip-address	Represents the IP address of the primary or secondary DNS server, or the network gateway that you want to assign. If you continue, this command causes a temporary loss of network connectivity. If you change the IP address for the primary DNS server, you must also restart the Cisco Tomcat service. For more information, see the utils service command. We also recommend that you restart all nodes whenever any IP address gets changed.
	network-mask	Represents the subnet mask for the server.
	gateway	Specifies the IP address of the default gateway.
	ip-address	Represents the IP address of the primary or secondary DNS server, or the network gateway that you want to assign. If you continue, this command causes a temporary loss of network connectivity. If you change the IP address for the primary DNS server, you must also restart the Cisco Tomcat service. For more information, see the utils service command. We also recommend that you restart all nodes whenever any IP address gets changed.

Command Modes

Administrator (admin:)

Usage Guidelines Image: Contine in the second state in the se

Command privilege level: 0

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

Example

admin:set network restore eth0 10.94.150.108 255.255.255.0 10.94.150.1

set network status eth0

This command sets the status of Ethernet 0 to up or down. You cannot configure Ethernet interface 1.

set network status eth0 {up | down}

Syntax Description	on Parameter	s Description	
	eth0	Specifies Ethernet interface 0.	
	up	Sets the status of Ethernet interface 0 to up.	
	down	Sets the status of Ethernet interface 0 to down.	
Command Modes		rator (admin:)	
Usage Guidelines	The system	m asks whether you want to continue to execute	his command.
_	<u>^</u>		
	Caution If yo	u continue, the system loses network connectivit	y temporarily.
	Requirem	ents	

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set network name-service

This command displays name service cache attributes.

Syntax Description	Attribute	Value
	Paranoia	Bool must be either Yes or No. Enabling paranoia mode causes Name Service to restart itself periodically.
	debug-level	If level is higher than 0, Name Service will create some debug output. Higher the level, more verbose the output.
	reload-count	Sets the number of times a cached record is reloaded before it is pruned from the cache. Each cache record has a timeout. When that timeout expires Name Service will either reload it (query the NSS service again if the data hasn't changed) or drop it.
	restart-interval	Sets the restart interval to time seconds if periodic restart is enabled by enabling paranoia mode. The default value is 3600.
Command Modes	Administrator (a	dmin:)
	Requirements	
	Command privil	ege level: 1

set network name-service [attribute] [value]

Allowed during upgrade: No

set password complexity minimum-length

This command modifies the value of minimum password length for the OS administration accounts.

	Note	Use this command after you enable the character complexity of passwords.	
	set	password complexity minimum-length max-repeat	
Syntax Description	Pa	ameters Description	
	vai	<i>ue</i> Enter a value of or greater than 6.	
Command Modes	Adı	ninistrator (admin:)	

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set password age

This command modifies the value for password age, in days, for Cisco Collaboration Communication OS (C3OS) accounts.

set password age {maximum | minimum} days

Parameters	Description
maximum	Specifies the maximum age.
minimum	Specifies the minimum age.
days	Specifies the maximum password age and must be greater-than or equal-to 90 days.
	maximum minimum

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set password change-at-login

Use this command to force new or existing users to change their password when they sign in to the system the next time.

set password change-at-login {disable | enable} userid

Syntax Description	Parameters Description	
	disable	This does not force users to change their password.
	enable	This forces users to change their password when they sign in to the system the next time.
	userid	Specifies the affected user account.

Command Modes Administrator (admin:)

Usage Guidelines By default, this command is enabled for new users, so users have to change their password the first time they sign in to the system.

Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: IM and Presence Service on Unified Communications Manager only.

set password complexity character

Use this command to enable or disable password complexity rules for the type of characters in a password.

Note After you enable password complexity, this command also enables password history if it has not already been enabled (for more information, see the **set password history** command). If you had not previously enabled password history, the password history number parameter value gets set to 10. If you previously enabled password history with a value of less than 10, the value gets reset to 10 after you execute this command. If you previously enabled password history with a value of 10 or greater, the value remains unchanged after you execute this command.

set password complexity character {disable | enable} num-char

Syntax Description	Parameters	Description
	disable	This turns off password complexity for character types.
	enable This turns on password complexity for character types.	
		Note When you disable password complexity, you also turn off password character difference , password character max-repeat , and password history .
	num-char	This specifies the number of characters required from each of the four character sets: lowercase, uppercase, numbers, and special characters.
		• Value range: 0-8
		• Default value: 1
Command Modes	Administra	tor (admin:)
Usage Guidelines	When you	enable password complexity, you must follow these guidelines when you assign a password:
-	• It mus	t have at least the current setting, num-chars, of lower-case character.
	• It mus	t have at least the current setting, num-chars, of uppercase characters.

- It must have at least the current setting, num-chars, of digit characters.
- It must have at least the current setting, num-chars, of special characters.
- You cannot use adjacent characters on the keyboard; for example, qwerty.
- You cannot reuse any of the previous passwords that match the passwords retained by password history.
- By default, the admin user password can be changed only once in a 24-hour day.

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set password complexity character difference

This command specifies the number of characters that the character sequence in a new password must differ from the character sequence in the old password.

Syntax Description				
	Parameters	Description		
	num-char	This specifies the number of characters that the character sequence in a new password must differ from the character sequence in the old password.		
		• Value range: 0-31		
Command Modes	Administra	tor (admin:)		
Usage Guidelines	Enter 0 to indicate no difference.			
	Note The maximum password length is 31 characters.			

set password complexity character difference num-char

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set password complexity character max-repeat

This command specifies the number of times you can consecutively repeat a single character in a new password.

set password complexity character max-repeat max-repeat

Syntax Description	Parameters Description
	<i>max-repeat</i> This specifies the number of times you can consecutively repeat a single character in a new password.
	• Value range: 0 – 10
	Default value: 0
Command Modes	Administrator (admin:)
	Requirements
	Command privilege level: 1
	Allowed during upgrade: No
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set password expiry maximum-age

This command enables or disables the password expiry maximum age settings for Cisco Collaboration Communication OS (C3OS) Administrator accounts.

set password expiry maximum-age {enable | disable}

Syntax Description	Parameters	Description
	enable	Turns on password expiry maximum age settings for Cisco Unified Operating System administrator accounts. The set password expiry enable command sets the value of maximum password age to 3650 days (10 yrs) for Cisco Unified Operating System Administrator accounts.

L

Parameters	Description
disable	Turns off password expiry maximum age settings for Cisco Unified Operating System administrator accounts. The set password expiry disable command results in Cisco Unified Operating System Administrator accounts never expiring.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

Example

```
admin:set password expiry maximum-age disable Operation Successful.
```

set password expiry user maximum-age configure

This command modifies the value of the maximum password age for a particular Cisco Collaboration Communication OS Administration account in days.

Syntax Description	Parameters	Description	
Command Modes	userid	Enter Cisco Collaboration Communication OS (C3OS Administrator account.	
	maximum password age	Enter the maximum password age in days. This value must be equal to or greater than 10 days but less than 3650 days (10 years).	
	Administrator (admin:)		
	Requirements		
	Command privilege level: 1		

set password expiry user maximum-age configure userid maximum password age

Set Commands

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set password expiry minimum-age

This command enables or disables the password expiry minimum age settings for Cisco Unified Operating System Administrator accounts.

set password expiry minimum-age {enable | disable}

Syntax Description	Parameters	Description
	enable	Turns on password expiry minimum age settings for Cisco Unified Operating System administrator accounts. The set password expiry enable command sets the value of minimum password age to one day (24 hrs) for Cisco Collaboration Communication OS (C3OS) Administrator accounts.
	disable	Turns off password expiry minimum age settings for Cisco Collaboration Communication OS (C3OS) administrator accounts. This means that passwords for administrator accounts can be changed at any interval.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

Example

admin:set password expiry minimum-age disable Operation Successful.

set password expiry user maximum-age

This command disables the maximum age password expiry for a particular Cisco Unified Operating System Administrator account.

set password expiry user maximum-age {enable | disable}userid

Syntax Description	Parameters	Description	
	enable	Turns on the maximum age password expiry settings for a particular Cisco Collaboration Communication OS (C3OS) administrator account. The set password expiry user enable command sets the value of maximum password age to 3650 days (10 yrs) for the Cisco Unified Operating System Administrator account.	
	disable	Turns on the maximum age password expiry settings for a particularCisco Collaboration Communication OS (C3OS) administrator account. The set password expiry user enable command sets the value of maximum password age to 3650 days (10 yrs) for the Cisco Unified Operating System Administrator account.	
	userid	Specifies a particular Cisco Collaboration Communication OS (C3OS) Administrator account.	
Command Modes	Administrator (admin:)		
	Requiremen	its	
	Command p	privilege level: 1	
	Allowed du	ring upgrade: No	
	Applies to: U	Jnified Communications Manager, IM and Presence Service on Unified Communications Manager, Inity Connection.	

Example

```
admin:set password expiry user maximum-age enable Operation Successful.
```

set password expiry user minimum-age

This command enables or disables the maximum age password expiry for a particular Cisco Unified Operating System Administrator account.

set password expiry user minimum-age {enable | disable} userid

Syntax Description	Parameters	Description
	enable	Turns on the minimum age password expiry settings for a particular Cisco Unified Operating System administrator account.
	disable	Turns off the minimum age password expiry settings for a particular Cisco Unified Operating System administrator account.
	userid	Specifies a particular Cisco Unified Operating System Administrator account.
Command Modes	Administrator (admin:)	

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

Example

admin:set password expiry user minimum-age disable Operation Successful.

set password history

This command modifies the number of passwords that get maintained in the history for OS admin accounts. New passwords matching remembered passwords get rejected.

Syntax Description	Parameters Description
	<i>number</i> Specifies the mandatory number of passwords to maintain in history.
Command Modes	Administrator (admin:)
Usage Guidelines	• To disable, enter 0.
	• Default specifies 10.
	• Upper limit specifies 20.

set password history number

Command privilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set password inactivity

Syntax Description	Parameters	Description	
	enable	Enable the password inactivity globally and update individual OS users according to the setting.	
	disable	Disable the password inactivity globally and update individual OS users according to the setting.	
	period	Configure the password inactivity period globally and update individual OS users according to the setting.	
	days	Specify the number of days of inactivity after a password has expired before the account gets disabled. Valid range is 1 - 99.	
Command Modes	Administrat	tor (admin:)	
Usage Guidelines		ble password inactivity globally, execute the set password inactivity enable command. This and enables the password inactivity globally and updates individual OS users according to the .	
		able password inactivity globally, execute the set password inactivity disable command. This and disables the password inactivity globally and updates individual OS users according to the .	
	A user whose account is disabled must contact the system administrator to use the system again.		
	• To configure the password inactivity period execute the set password inactivity period days command. This command configures the password inactivity globally and updates individual OS users according to the setting.		
	Requiremen	Its	
	Command p	privilege level: 0	
	Allowed du	ring upgrade: No	
	11	Unified Communications Manager, IM and Presence Service on Unified Communications Manager, Inity Connection.	

set password inactivity {enable | disable | period} days

set password system bootloader encryptHash

Use this command to configure the encrypted password in the grub.conf file for the system boot loader.

set password system bootloader encryptHash

Command Modes Administrator (admin:)

Requirements

Command privilege level: 4

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set password user admin

This command allows you to change the administrator password.

	set password user admin
Command Modes	Administrator (admin:)
Usage Guidelines	The systems prompts you for the old and new passwords.

Note

• You can change the password only for the administrator account that you logged in to.

• The password must contain at least six characters, and the system checks it for strength.

Requirements

Command privilege level: 1

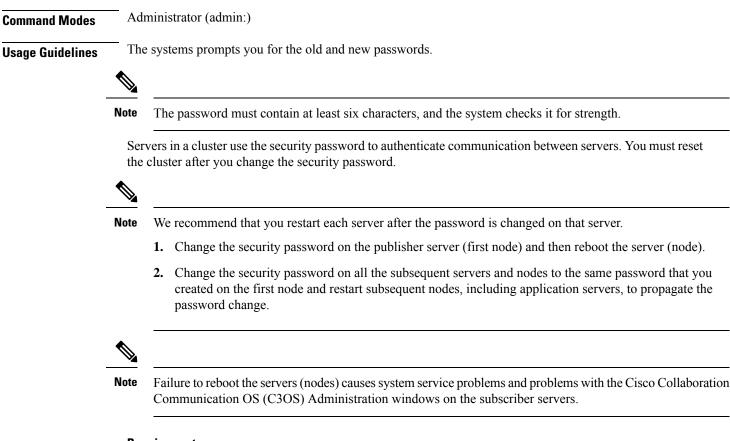

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set password user security

This command allows you to change the security password.

set password user security

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

Set replication-sync monitor

This command enables or disables replication monitoring by the Cisco Replication Watcher service. The Cisco Replication Watcher service blocks other services from starting until database replication is setup and functioning normally.

set replication-sync monitor {enable | disable}

Syntax Description	Parameters	rameters Description	
	enable	Turns on the replication monitoring service.	
	disable	Turns off the replication monitoring service	
Command Modes	Administrator (admin:)		

Command privilege level: 1

Allowed during upgrade: No

Applies to: IM and Presence Service on Unified Communications Manager only

set samltrace level

This command sets the SAML trace level.

set samltrace level trace level

Syntax Description	Parameters	Description	on
	trace level	Specifies	the trace level. The available options are:
		• DEB	BUG
		• INFO	С
		• WAF	RNING
		• ERR	OR
		• FAT	AL
		Note	The default trace level is INFO.
Command Modes	Administrat	or (admin:))
	Requiremen	ts	
	Command p	rivilege le	vel: 0
	Allowed du	ring upgrad	de: Yes
	Applies to: I	Inified Cor	nmunications Manager IM and Presence Se

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set session maxlimit

This command sets the upper limit for concurrent sessions.

set session maxlimit	[value]
----------------------	---------

Syntax Description Pa	aramet
-----------------------	--------

eters Description maxlimit This command sets the upper limit for concurrent sessions. Acceptable values are 1 - 10. If no upper limit is entered, the default value of 10 is assigned to sshd_config param.

	Parameters Description			
	<i>value</i> Acceptable values are 1 - 10.			
Command Modes	Administrator (admin:)			
	Requirements			
	Command privilege level: 1			
	Allowed during upgrade: Yes			
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.			
set smtp				
	This command sets the SMTP server hostname.			
	set smtp hostname			
Syntax Description	Parameters Description			
	hostname Represents the SMTP server name.			
Command Modes	Administrator (admin:)			
	Requirements			
	Command privilege level: 0			
	Allowed during upgrade: No			
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.			

set strace enable

This command enables the service trace and sets the trace level.

set strace enable [all]tracevalue servicename

Syntax Description	Parameters	Description
	all	Optional parameter to propagate the service trace settings change to all nodes.
	tracevalue	Represents allowed trace values. Allowed trace values are [Info Debug Warn Error Fatal]
	servicename	Represents the service for which the trace is enabled.

Command Modes Administrator (admin:)

Requirements

Command privilege level: 0

Allowed during upgrade: No

Applies to: Unified Communications Manager and IM and Presence Service on Unified Communications Manager

set strace disable

This command disables the service trace.

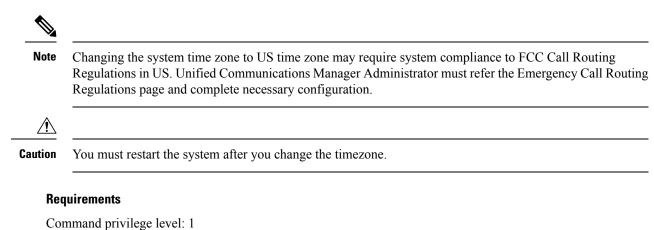

set strace disable [all] servicename

Syntax Description	Parameters Description			
	<i>all</i> Optional parameter to propagate the service trace settings change to all nodes.			
	servicename Represents the service for which the trace is enabled.			
Command Modes	Administrator (admin:)			
	Requirements			
	Command privilege level: 0			
	Allowed during upgrade: No			
	Applies to: Unified Communications Manager and IM and Presence Service on Unified Communication Manager			
	č			

set timezone

This command lets you change the system timezone.

	set timezon	e zone
Syntax Description	Parameters	Description
	zone	Specifies the new timezone. Enter the appropriate string or zone index id to uniquely identify the timezone. To view a list of valid timezones, use the CLI command: show timezone list .
Command Modes	Administrator (admin:)	
Usage Guidelines	Enter charac	cters to uniquely identify the new timezone. Be aware that the timezone name is case-sensitive.

1 0

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

Example Setting Timezone to Pacific Time

admin:set timezone Pac

set tls min-version

This command sets the minimum version of Transport Layer Security (TLS) protocol.

Note

• After you set the minimum TLS version, the system reboots.

• Configure the minimum TLS version for each node.

Syntax Description	Parameters	Description
	tls minVersion	Type one of the following options to set it as the minimum TLS version:
		• 1.0
		• 1.1
		• 1.2
Command Modes	Administrator	(admin:)
	_	
Usage Guidelines	Requirements	
	Command pri	vilege level: 1

Allowed during upgrade: Yes

Applies to: Unified Communications Manager and IM and Presence Service on Unified Communications Manager

Example

admin: set tls min-version 1.1

set trace disable

This command unsets trace activity for the specified task.

set trace disable tname

Syntax Description	Parameters	Description	
	disable	Unsets the task trace settings.	
	tname	Represents the task for which you want to disable traces.	
Command Modes	Administrator (admin:)		
	Requireme	nts	
	Command]	privilege level: 1	
	Allowed du	iring upgrade: No	
		Unified Communications Manager, IM and Presence Service Unity Connection.	e on Unified Communications Manager,

set trace enable

This command sets trace activity for the specified task.

I

Syntax Description	Parameters	Description
	Arbitrary	Sets task trace settings to the arbitrary level.
	Detailed	Sets task trace settings to the detailed level.
	Entry_exit	Sets task trace settings to the entry_exit level.
	Error	Sets task trace settings to the error level.
	Significant	Sets task trace settings to the significant level.
	Special	Sets task trace settings to the special level.
	State_transition	Sets task trace settings to the state transition level.
	tname	Represents the task for which you want to disable traces

set trace enable {Arbitrary | Detailed | Entry_exit | Error | Significant | Special | State_Transition} *tname*

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set tlsresumptiontimeout

This command sets the number of seconds after which TLS resumption will not work and sessions are invalidated.

set tlsresumptiontimeout seconds

Syntax Description	Parameters Description		
	<i>seconds</i> Enter a value up to 3600 seconds. The TLS sessions are invalid after the configured value.		
	Administrator (admin:)		
	Requirements		
	Command privilege level: 1		
	Allowed during upgrade: Yes		
	Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager and Cisco Unity Connection.		

set tlstrace*

Unified Communications Manager Release 11.0 onwards, you can enable or disable TLS tracing for services. Currently, Tomcat is the only supported service. Use the CLI commands to view the reasons of connection failure of TLS connections to Unified Communications Manager.

Following TLS-based CLI commands are added for TLS tracing:

set tlstrace disable

This CLI command disables the TLS tracing for a service.

set tlstrace disable service

Syntax Description	Parameters Description
	<i>service</i> Specifies the service that you use to disable TLS tracing.
Command Modes	Administrator (admin:)
	Example
	admin:set tlstrace disable tomcat TLS tracing is disabled for: tomcat
	Requirements
	Command privilege level: 1
	Allowed during upgrade: No

set tistrace enable

This CLI command enables the TLS tracing for a service.

set tlstrace enable service

Syntax Description	Parameters	Description
	service	Specifies the service that you use to enable TLS tracing.
Command Modes	Administrat	tor (admin:)
	Example	

admin:set tlstrace enable tomcat TLS tracing is enabled for: tomcat

Command privilege level: 1

Allowed during upgrade: No

set web-security

This command sets the web security certificate information for the operating system.

set web-security orgunit orgname locality state [country] [alternatehostname]

Syntax Description	Parameters	Description	
	orgunit	Represents the organizational unit (OU) name.	
		You can use this command to enter multiple organizational units. To enter more than one organizational unit name, separate the entries with a comma. For entries that already contain a comma, enter a backslash before the comma that is included as part of the entry. To enter multiple values for organizational unit, enclose them in quotation marks, as shown in the example for this command.	
		Note For OU's that already contains a backslash, do not enter one more backslash as SLM registration and CSR generation fails during the time of installation.	
	orgname	Represents the organizational name.	
	locality	Represents the organization location.	
	state	Represents the organization state.	
	country	(Optional) Represents the organization country.	
	alternatehostnar	<i>ne</i> (Optional) Specifies an alternate name for the host when you generate a web-server (Tomcat) certificate.	
		You can use alternatehostname to set subject alternate hostname for self signed certificates. Subject alternate hostname for CSR is defined in the Certificate Management page. If you have set the alternate hostname for CSR using this command, the CSR generation process replaces the set alternate hostname.	
		b-security command when adding in the alternate hostname will apply and will be added to all erated CSR's including, Tomcat, CallManager, CAPF, TVS, and IPsec.	
Command Modes	Administrator (admin:)	
Usage Guidelines	parameters. Elso because the plat	case you are planning to rebuild the Unified CM server, ensure that you should use the same OU subject ameters. Else, this will create discrepancies when you execute the command show web-security . This is ause the platformConfig.xml file will not have the saved parameters information provided before the uild as this file is not backed up during DRS backup.	

Command privilege level: 0

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

Example

This example shows the web-security command with multiple organizational unit names using comma separators. The certificate has three OU fields:

- OU=accounting
- OU=personnel, CA
- OU=personnel, MA

```
admin:set web-security "accounting,personnel\,CA,personnel\,MA" Cisco Milpitas
CA
set web-security "Voice\Video" "Cisco" "RTP" NC
```

set webapp session timeout

This command sets the time, in minutes, that can elapse before a web application, such as Unified Communications Manager Administration, times out and logs off the user.

For the new webapp session timeout setting to become effective, you must restart the Cisco Tomcat service. Until you restart the Cisco Tomcat service, the **show webapp session timeout** command reflects the new values, but system continues to use and reflect the old values. This command prompts you to restart the service.

Caution

Restarting the Cisco Tomcat service ends all active sessions and can affect system performance. Cisco recommends that you only execute this command during off-peak traffic hours.

Note This setting gets preserved through a software upgrade and does not get reset to the default value.

set webapp session timeout minutes

 Syntax Description
 Parameters
 Description

 minutes
 Specifies the time, in minutes, that can elapse before a web application times out and logs off the user.

 • Value range: 5-99999 minutes

 • Default value: 30 minutes

Command Modes Administrator (admin:)

Requirements

Command privilege level: 1

Allowed during upgrade: No

Applies to: Unified Communications Manager, IM and Presence Service on Unified Communications Manager, and Cisco Unity Connection.

set webapp session maxlimit

This command sets the maximum limit for concurrent web application sessions per user. This applies to the following interfaces:

- Cisco Unified CM Administration
- Cisco Unified Serviceability
- Cisco Unified Reporting
- Cisco Unified Communications Self Care Portal
- · Cisco Unified CM IM and Presence Administration
- · Cisco Unified IM and Presence Serviceability
- Cisco Unified IM and Presence Reporting

For the session maximum limit setting to become effective, the administrator must restart the Cisco Tomcat service.

Caution

Restarting the Cisco Tomcat service ends all active sessions and can affect the system performance. Cisco recommends that you only execute this command during off-peak traffic hours.

Note This setting gets preserved through a software upgrade and does not get reset to the default value.

set webapp session maxlimit number

Syntax Description	Parameters	Description	1
	number	Specifies th	ne number to limit the concurrent web application sessions.
		The value r	ranges from 1 to 10.
		Default val	ue is 10.
		more detail chapter in t at https://w	EnhancedSecurityMode is enabled, then the session limit is restricted to 3. For s on how to Configure Enhanced Security Mode, see the "FIPS 140-2 Mode Setup" he <i>Security Guide for Cisco Unified Communications Manager, Release 11.5(1)SU1</i> www.cisco.com/c/en/us/support/unified-communications/ nmunications-manager-callmanager/products-maintenance-guides-list.html.
		Note	• When you exceed the defined sign-in sessions maximum limit, then the interface sign-in page displays the Logon Status message as: The Session limit has already been reached for <username>. Please logout from those sessions or wait 30 minutes for inactive sessions to be automatically closed.</username>
			• When Enhanced Security Mode is enabled, then the session limit is restricted to 3. However, Administrator can change the session limit using the set webapp session maxlimit command to any value ranging from 1 to 10.
