show aaa dead-criteria radius

To verify the dead-server-detection information for a RADIUS server, use the **show aaa dead-criteria radius** command.

show aaa dead-criteria radius *ipaddr* **auth-port** *authport* **acct-port** *acctport*

Syntax Description	<i>ipaddr</i> IP address.				
	<i>authport</i> Authentication port.				
	<i>acctport</i> Accounting port.				
Command Default	None				
Command Modes	Privileged EXEC (#)				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Gibraltar 16.10.1</td> <td>This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.
Release	Modification				
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.				
Usage Guidelines	The show aaa dead-criteria radius <i>ipaddr</i> command displays output only if default ports are used. For non-default ports, use the show aaa dead-criteria radius <i>ipaddr</i> auth-port <i>authport</i> acct-port <i>acctport</i> command.				

Example

The following example shows how to see the dead-server-detection information for a RADIUS server with non-default authorization and accounting ports:

```
Device# show aaa dead-criteria radius 4.4.4.4 auth-port 4444 acct-port 3333
```

```
RADIUS: No server group specified. Using radius
RADIUS Server Dead Criteria:
=====
Server Details:
Address : 4.4.4.4
Auth Port : 4444
Acct Port : 3333
Server Group : radius
Dead Criteria Details:
Configured Retransmits : 3
Configured Timeout : 5
Estimated Outstanding Access Transactions: 0
Estimated Outstanding Accounting Transactions: 0
Dead Detect Time : 10s
Computed Retransmit Tries: 10
Statistics Gathered Since Last Successful Transaction
=====
Max Computed Outstanding Transactions: 0
Max Computed Dead Detect Time: 0s
```

```
Max Computed Retransmits : 0
```

The following example shows how to see the dead-server-detection information for a RADIUS server using default ports:

```
Device# show aaa dead-criteria radius 9.3.13.37

RADIUS: No server group specified. Using radius
RADIUS Server Dead Criteria:
=====
Server Details:
Address : 9.3.13.37
Auth Port : 1812
Acct Port : 1813
Server Group : radius
Dead Criteria Details:
Configured Retransmits : 3
Configured Timeout : 30
Estimated Outstanding Access Transactions: 1
Estimated Outstanding Accounting Transactions: 0
Dead Detect Time : 10s
Computed Retransmit Tries: 10
Statistics Gathered Since Last Successful Transaction
=====
Max Computed Outstanding Transactions: 4
Max Computed Dead Detect Time: 48s
Max Computed Retransmits : 30
```

show aaa servers

To display the status and number of packets that are sent to and received from all public and private authentication, authorization, and accounting (AAA) RADIUS servers as interpreted by the AAA Server MIB, use the **show aaa servers** command.

show aaa servers [private | public]

Syntax Description	<p>private (Optional) Displays private AAA servers only, which are also displayed by the AAA Server MIB.</p> <p>private (Optional) Displays public AAA servers only, which are also displayed by the AAA Server MIB.</p>				
Command Default	None				
Command Modes	Privileged EXEC(#)				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Gibraltar 16.10.1</td> <td>This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.
Release	Modification				
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.				
Usage Guidelines	Only RADIUS servers are supported by the show aaa servers command.				

Example

The following command displays information about packets sent and received for all AAA transaction types--authentication, authorization, and accounting.

```
Device# show aaa servers
```

```
RADIUS: id 2, priority 1, host 124.2.2.12, auth-port 1645, acct-port 1612, hostname rsim
  State: current UP, duration 20699s, previous duration 0s
  Dead: total time 0s, count 0
  Platform State from SMD: current UP, duration 20699s, previous duration 0s
  SMD Platform Dead: total time 0s, count 0
  Platform State from WNCN (1) : current UP
  Platform State from WNCN (2) : current UP
  Platform State from WNCN (3) : current UP
  Platform State from WNCN (4) : current UP
  Platform State from WNCN (5) : current UP
  Platform State from WNCN (6) : current UP
  Platform State from WNCN (7) : current UP
  Platform State from WNCN (8) : current UP, duration 964s, previous duration 0s
  Platform Dead: total time 0s, count 0UP
  Quarantined: No
.
.
.

Elapsed time since counters last cleared: 5h44m
Estimated Outstanding Access Transactions: 0
Estimated Outstanding Accounting Transactions: 0
Estimated Throttled Access Transactions: 0
Estimated Throttled Accounting Transactions: 0
```

```
Maximum Throttled Transactions: access 0, accounting 0
Consecutive Response Failures: total 0
  SMD Platform : max 0, current 0 total 0
  WNCN Platform: max 0, current 0 total 0
  IOSD Platform : max 0, current 0 total 0
Consecutive Timeouts: total 0
  SMD Platform : max 0, current 0 total 0
  WNCN Platform: max 0, current 0 total 0
  IOSD Platform : max 0, current 0 total 0
Requests per minute past 24 hours:
  high - 5 hours, 44 minutes ago: 0
  low  - 5 hours, 44 minutes ago: 0
  average: 0
```

show aaa server brief

To view the summary information of Authentication, Authorization, and Accounting (AAA) servers, use the **show aaa server brief** command.

show aaa server brief

Syntax Description This command has no keywords or arguments.

Command Default None

Command Modes Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Dublin 17.11.1	This command was introduced.

Examples The following example shows how to view the summary information of AAA servers:

```
Device# show aaa server brief
```

Access Reqs	Access Total tx (Auth+Acct)	Access Resp (Auth+Acct)	Access Uptime (IOSD)	Access Uptime (SMD)	Outstndg Uptime (WNCD)	Acct. Access tx	Acct. Req	Acct. Responses	Outstndg timeouts	Total Acct.
rsim	0	0	0	0	0	0	0	0	0	0
0	0		2372790	2372790	964					
R1	0	0	0	0	0	0	0	0	0	0
0	0		2372790	2372790	964					
free-radius-aut hc-server	0	0	0	0	0	0	0	0	0	0
0	0		2372790	2372790	964					
cisco-dnac-auth z-server	0	0	0	0	0	0	0	0	0	0
0	0		2372790	2372790	964					
r1	0	0	0	0	0	0	0	0	0	0
0	0		2372790	2372790	964

0	0		2372790	2372790	964					
Radius-2	0	0	0	0	0	0	0	0	0	0
0	0		2274176	2274176	296805					

show access-list

To display access control lists (ACLs) configured on the device, use the **show access-lists** command in privileged EXEC mode.

```
show access-lists[ {namenumber | hardware counters | ipc}]
```

Syntax Description	
<i>number</i>	(Optional) ACL number. The range is 1 to 2799.
<i>name</i>	(Optional) Name of the ACL.
hardware counters	(Optional) Displays the access list hardware counters.
ipc	(Optional) Display Interprocess Communication (IPC) protocol access-list configuration download information

Command Default

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.11.1	This command was introduced.

Usage Guidelines

Though visible in the command-line help strings, the **rate-limit** keyword is not supported

The device supports only IP standard and extended access lists. Therefore, the allowed numbers are only 1 to 199 and 1300 to 2799.

This command also displays the MAC ACLs that are configured.

This is an example of output from the **show access-lists** command:

```
Device# show access-lists

Extended IP access list 103
  10 permit ip any any dscp af11
Extended IP access list ssm-range
  10 deny ip any 232.0.0.0 0.255.255.255
  20 permit ip any any
Extended MAC access list mac1
```

This is an example of output from the **show access-lists hardware counters** command:

```
Device# show access-lists hardware counters
L3 ACL INPUT Statistics
  All Drop:                               frame count: 0
  All Bridge Only:                       frame count: 0
  All Forwarding To CPU:                  frame count: 294674
  All Forwarded:                         frame count: 2577677
```

```
All Drop And Log:          frame count: 0
All Bridge Only And Log:   frame count: 0
All Forwarded And Log:     frame count: 0
All IPv6 Drop:             frame count: 0
All IPv6 Bridge Only:      frame count: 0
All IPv6 Forwarding To CPU: frame count: 0
All IPv6 Forwarded:        frame count: 102
All IPv6 Drop And Log:     frame count: 0
All IPv6 Bridge Only And Log: frame count: 0
All IPv6 Forwarded And Log: frame count: 0
```

L3 ACL OUTPUT Statistics

```
All Drop:                  frame count: 0
All Bridge Only:           frame count: 0
All Forwarding To CPU:     frame count: 0
All Forwarded:             frame count: 266050
All Drop And Log:          frame count: 0
All Bridge Only And Log:   frame count: 0
All Forwarded And Log:     frame count: 0
All IPv6 Drop:             frame count: 0
All IPv6 Bridge Only:      frame count: 0
All IPv6 Forwarding To CPU: frame count: 0
All IPv6 Forwarded:        frame count: 0
All IPv6 Drop And Log:     frame count: 0
All IPv6 Bridge Only And Log: frame count: 0
All IPv6 Forwarded And Log: frame count: 0
```

show ap auth-list

To see the access point authorization list, use the **show ap auth-list** command.

```
show ap auth-list [chassis {chassis-number | active | standby} R0]
```

Syntax Description

chassis-number Chassis number as either 1 or 2.

active R0 Active instance in Route-processor slot 0.

standby R0 Standby instance in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the access point authorization list:

```
Device# show ap auth-list
```

show ap auth-list ap-cert-policy

To verify if the APs have been authorized by the AP certificate policy, use the **show ap auth-list ap-cert-policy**

show ap auth-list ap-cert-policy

Syntax Description	This command has no arguments.
---------------------------	--------------------------------

Command Default	Privileged EXEC (#)
------------------------	---------------------

Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.

Example

The following example shows how to verify if the APs have been authorized by the AP certificate policy:

```
Device# show ap auth-list ap-cert-policy
```

show ap auto-rf

To display the auto-RF settings for a Cisco lightweight access point, use the **show ap auto-rf** command.

```
show ap auto-rf dot11 { 24ghz | 5ghz | dual-band } cisco_ap
```

Syntax Description	24ghz	Specifies the 802.11b AP.
	5ghz	Specifies the 802.11a AP.
	dual-band	Specifies dual bands.

Command Default	None
-----------------	------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.12.1

Usage Guidelines The **show ap auto-rf command** output will not display neighbor AP names.

The following example shows how to display auto-RF information for an access point:

```
Device# show ap auto-rf dot11 24ghz AP1
#####
Number of Slots                : 3
AP Name                        : APA023.9FD8.EA22

show ap config

To display configuration settings for all access points that join the device, use the **show ap config** command.

show ap config {general | slots}

Syntax Description	
ethernet	Displays ethernet related information for all Cisco APs.
general	Displays common information for all Cisco APs.
slots	Displays configuration information for all slots of all Cisco APs.

Command Default None

Command Modes Any command mode

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

This example shows how to display global syslog server settings:

```
Device# show ap config general
Cisco AP Name      : APA023.9FAE.E190
=====
Cisco AP Identifier      : 40ce.24f7.50e0

```

show ap config slots

To display configuration settings for all the slots, use the **show ap config slots** command.

show ap config slots

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Cupertino 17.9.1	This command was introduced.

Examples

The following example displays the configuration settings for all the slots in a Cisco wireless controller:

```
Device# show ap config slots

=====
Cisco AP Identifier           : 40ce.24bf.8ca0
Cisco AP Name                 : APA023.9FD8.EA22
AP Country Code              : IN
.
.
.

Zero Wait DFS Parameters
  Zero Wait DFS Capable      : Yes
  CAC Domain                  :
```

show ap crash-file

To display the list of both crash and radio core dump files generated by lightweight access points, use the **show ap crash-file** command.

show ap crash-file *chassis chassis-number <1-2>* **active standby**

Syntax Description	Parameter	Description
	chassis	Displays the chassis details.
	<i>chassis-number</i>	Specifies the chassis number, either 1 or 2.
	active	Specifies an active instance.
	standby	Specifies a standby instance.

Command Default None

Command Modes Any command mode

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

This example shows how to display the crash file generated by the access point:

```
Device# show ap crash-file
```

show ap dot11

To view 802.11a or 802.11b configuration information, use the **show ap dot11** command.

```
show ap dot11 { 24ghz | 5ghz } { channel | coverage | group | load-info | logging | media-stream
| monitor | network | profile | summary | txpower | }
```

Syntax	Description
24ghz	Specifies the 2.4-GHz band.
5ghz	Specifies the 5-GHz band.
6ghz	Specifies the 6-GHz band.
channel	Displays the automatic channel assignment configuration and statistics.
coverage	Displays the configuration and statistics for coverage hole detection.
group	Displays 802.11a or 802.11b Cisco radio RF grouping.
load-info	Displays channel utilization and client count information for all Cisco APs.
logging	Displays 802.11a or 802.11b RF event and performance logging.
media-stream	Display 802.11a or 802.11b Media Resource Reservation Control configurations.
monitor	Displays the 802.11a or 802.11b default Cisco radio monitoring.
network	Displays the 802.11a or 802.11b network configuration.
profile	Displays the 802.11a or 802.11b lightweight access point performance profiles.
receiver	Displays the configuration and statistics of the 802.11a or 802.11b receiver.
summary	Displays the 802.11a or 802.11b Cisco lightweight access point name, channel, and transmit level summary.
txpower	Displays the 802.11a or 802.11b automatic transmit power assignment.

Command Default None

Command Modes Any command mode

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

This example shows how to display the automatic channel assignment configuration and statistics:

```
Device# show ap dot11 5ghz channel
Automatic Channel Assignment
  Channel Assignment Mode      : AUTO
  Channel Update Interval     : 12 Hours
  Anchor time (Hour of the day) : 20
  Channel Update Contribution  : SNI.
  Channel Assignment Leader    : web (9.9.9.2)
  Last Run                    : 13105 seconds ago
  DCA Sensitivity Level       : MEDIUM (15 dB)
  DCA 802.11n Channel Width   : 40 Mhz
  Channel Energy Levels
    Minimum                   : unknown
    Average                   : unknown
    Maximum                   : unknown
  Channel Dwell Times
    Minimum                   : unknown
    Average                   : unknown
    Maximum                   : unknown
  802.11a 5 GHz Auto-RF Channel List
  Allowed Channel List       : 36,40,44,48,52,56,60,64,149,153,1
  57,161
  Unused Channel List       : 100,104,108,112,116,132,136,140,1
  65
  802.11a 4.9 GHz Auto-RF Channel List
  Allowed Channel List       :
  Unused Channel List       : 1,2,3,4,5,6,7,8,9,10,11,12,13,14,
  15,16,17,18,19,20,21,22,23,24,25,26
  DCA Outdoor AP option     : Disabled
```

This example shows how to display the statistics for coverage hole detection:

```
Device# show ap dot11 5ghz coverage
Coverage Hole Detection
  802.11a Coverage Hole Detection Mode : Enabled
  802.11a Coverage Voice Packet Count : 100 packet(s)
  802.11a Coverage Voice Packet Percentage : 50 %
  802.11a Coverage Voice RSSI Threshold : -80dBm
  802.11a Coverage Data Packet Count : 50 packet(s)
  802.11a Coverage Data Packet Percentage : 50 %
  802.11a Coverage Data RSSI Threshold : -80dBm
  802.11a Global coverage exception level : 25
  802.11a Global client minimum exception level : 3 clients
```

This example shows how to display Cisco radio RF group settings:

```
Device# show ap dot11 5ghz group
Radio RF Grouping
  802.11a Group Mode          : STATIC
  802.11a Group Update Interval : 600 seconds
  802.11a Group Leader        : web (10.10.10.1)
  802.11a Group Member        : web(10.10.10.1)
                               nbl(172.13.21.45) (*Unreachable)
  802.11a Last Run           : 438 seconds ago
```

```
Mobility Agents RF membership information
-----
```

```
No of 802.11a MA RF-members : 0
```

This example shows how to display 802.11a RF event and performance logging:

```
Device# show ap dot11 5ghz logging
RF Event and Performance Logging

Channel Update Logging           : Off
Coverage Profile Logging         : Off
Foreign Profile Logging          : Off
Load Profile Logging             : Off
Noise Profile Logging            : Off
Performance Profile Logging      : Off
TxPower Update Logging           : Off
```

This example shows how to display the 802.11a media stream configuration:

```
Device# show ap dot11 5ghz media-stream
Multicast-direct                 : Disabled
Best Effort                      : Disabled
Video Re-Direct                  : Disabled
Max Allowed Streams Per Radio    : Auto
Max Allowed Streams Per Client   : Auto
Max Video Bandwidth              : 0
Max Voice Bandwidth              : 75
Max Media Bandwidth              : 85
Min PHY Rate (Kbps)              : 6000
Max Retry Percentage              : 80
```

This example shows how to display the radio monitoring for the 802.11b network:

```
Device# show ap dot11 5ghz monitor
Default 802.11a AP monitoring

802.11a Monitor Mode              : Enabled
802.11a Monitor Mode for Mesh AP Backhaul : disabled
802.11a Monitor Channels          : Country channels
802.11a RRM Neighbor Discover Type : Transparent
802.11a AP Coverage Interval      : 180 seconds
802.11a AP Load Interval          : 60 seconds
802.11a AP Noise Interval         : 180 seconds
802.11a AP Signal Strength Interval : 60 seconds
```

This example shows how to display the global configuration and statistics of an 802.11a profile:

```
Device# show ap dot11 5ghz profile
Default 802.11a AP performance profiles
802.11a Global Interference threshold..... 10%
802.11a Global noise threshold..... -70 dBm
802.11a Global RF utilization threshold..... 80%
802.11a Global throughput threshold..... 1000000 bps

```

This example shows how to display the global configuration and statistics of an 802.11a profile:

```
Device# show ap dot11 5ghz service-policy
```

This example shows how to display a summary of the 802.11b access point settings:

```

Device# show ap dot11 5ghz summary
AP Name  MAC Address      Admin State  Operation State  Channel  TxPower
-----  -
CJ-1240  00:21:1b:ea:36:60  ENABLED     UP                161     1 ( )
CJ-1130  00:1f:ca:cf:b6:60  ENABLED     UP                56*     1 (*)

```

This example shows how to display the configuration and statistics of the 802.11a transmit power cost:

```

Device# show ap dot11 5ghz txpower
Automatic Transmit Power Assignment

Transmit Power Assignment Mode      : AUTO

```

```
Transmit Power Update Interval      : 600 seconds
Transmit Power Threshold            : -70 dBm
Transmit Power Neighbor Count       : 3 APs
Min Transmit Power                  : -10 dBm
Max Transmit Power                  : 30 dBm
Transmit Power Update Contribution   : SNI.
Transmit Power Assignment Leader    : web (10.10.10.1)
Last Run                            : 437 seconds ago
```

This example shows how to display the configuration and statistics of the 802.11a transmit power cost:

```
Device# show ap dot11 5ghz ccx global
802.11a Client Beacon Measurements:
    disabled
```

show ap dot11

To display 802.11 band parameters, use the **show ap dot11** command.

```
show ap dot11 {24ghz | 5ghz} {media-stream rrc}
```

Syntax Description	media-stream rrc Displays Media Stream configurations.
Command Default	None
Command Modes	User EXEC command mode or Privileged EXEC command mode
Usage Guidelines	None.

The following is a sample output of the **show ap dot11 24ghz media-stream rrc** command.

```
Device#show ap dot11 24ghz media-stream rrc

Multicast-direct           : Disabled
Best Effort                 : Disabled
Video Re-Direct            : Disabled
Max Allowed Streams Per Radio : Auto
Max Allowed Streams Per Client : Auto
Max Video Bandwidth         : 0
Max Voice Bandwidth         : 75
Max Media Bandwidth         : 85
Min PHY Rate (Kbps)         : 6000
Max Retry Percentage        : 80
```

show ap dot11 24ghz

To display the 2.4 GHz RRM parameters, use the **show ap dot11 24ghz** command.

show ap dot11 24ghz {channel | coverage | group | logging | monitor | profile | summary | txpower}

Syntax Description	
ccx	Displays the 802.11b CCX information for all Cisco APs.
channel	Displays the configuration and statistics of the 802.11b channel assignment.
coverage	Displays the configuration and statistics of the 802.11b coverage.
group	Displays the configuration and statistics of the 802.11b grouping.
l2roam	Displays 802.11b l2roam information.
logging	Displays the configuration and statistics of the 802.11b event logging.
monitor	Displays the configuration and statistics of the 802.11b monitoring.
profile	Displays 802.11b profiling information for all Cisco APs.
receiver	Displays the configuration and statistics of the 802.11b receiver.
summary	Displays the configuration and statistics of the 802.11b Cisco APs.
txpower	Displays the configuration and statistics of the 802.11b transmit power control.

Command Default None.

Command Modes Global configuration.

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

Usage Guidelines None.

This example shows how to display configuration and statistics of the 802.11b coverage.

```
Device#show ap dot11 24ghz coverage
```

```
Coverage Hole Detection
 802.11b Coverage Hole Detection Mode      : Enabled
 802.11b Coverage Voice Packet Count      : 100 packet(s)
 802.11b Coverage Voice Packet Percentage  : 50%
 802.11b Coverage Voice RSSI Threshold    : -80 dBm
 802.11b Coverage Data Packet Count       : 50 packet(s)
 802.11b Coverage Data Packet Percentage  : 50%
 802.11b Coverage Data RSSI Threshold     : -80 dBm
 802.11b Global coverage exception level   : 25 %
 802.11b Global client minimum exception level : 3 clients
```

show ap dot11 24ghz SI config

To see the spectrum intelligence (SI) configuration details for the 2.4-GHz band, use the **show ap dot11 24ghz SI config** command.

show ap dot11 24ghz SI config [**chassis** {*chassis-number* | **active** | **standby**} **R0**]

Syntax Description	
<i>chassis-number</i>	Chassis number as either 1 or 2.
active R0	Active instance of the configuration in Route-processor slot 0.
standby R0	Standby instance of the configuration in Route-processor slot 0.

Command Default None

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the SI configuration details for the 2.4-GHz band:

```
Device# show ap dot11 24ghz SI config chassis 1 R0
```

show ap dot11 24ghz SI device type

To see the spectrum intelligence (SI) interferers of different types for the 2.4-GHz band, use the **show ap dot11 24ghz SI device type** command.

```
show ap dot11 24ghz SI device type {cont_tx | mw_oven | si_fhss} [chassis {chassis-number
| active | standby} R0]
```

Syntax Description		
cont_tx	SI interferers of type Continuous transmitter for the 2.4-GHz band.	
mw_oven	SI interferers of type microwave oven for the 2.4-GHz band.	
si_fhss	SI interferers of type Frequency Hopping Spread Spectrum for the 2.4-GHz band.	
<i>chassis-number</i>	Enter the chassis number as either 1 or 2.	
active R0	Active instance of the configuration in Route-processor slot 0.	
standby R0	Standby instance of the configuration in Route-processor slot 0.	

Command Default None

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the details of SI interferers of type microwave oven in the 2.4-GHz band:

```
Device# show ap dot11 24ghz SI device type mw_oven chassis 1 R0
```

show ap dot11 5ghz

To display the 5GHz RRM parameters, use the **show ap dot11 5ghz** command.

show ap dot11 5ghz {**channel** | **coverage** | **group** | **logging** | **monitor** | **profile** | **summary** | **txpower**}

Syntax Description

ccx	Displays the 802.11a CCX information for all Cisco APs.
channel	Displays the configuration and statistics of the 802.11a channel assignment.
coverage	Displays the configuration and statistics of the 802.11a coverage.
group	Displays the configuration and statistics of the 802.11a grouping.
l2roam	Displays 802.11a l2roam information.
logging	Displays the configuration and statistics of the 802.11a event logging.
monitor	Displays the configuration and statistics of the 802.11a monitoring.
profile	Displays 802.11a profiling information for all Cisco APs.
receiver	Displays the configuration and statistics of the 802.11a receiver.
summary	Displays the configuration and statistics of the 802.11a Cisco APs.
txpower	Displays the configuration and statistics of the 802.11a transmit power control.

Command Default

None.

Command Modes

Global configuration.

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

Usage Guidelines

None.

This example shows configuration and statistics of 802.11a channel assignment.

```
Device#show ap dot11 5ghz channel
```

```
Automatic Channel Assignment
Channel Assignment Mode           : AUTO
Channel Update Interval          : 12 Hours

                    15,16,17,18,19,20,21,22,23,24,25,26
DCA Outdoor AP option : Disabled
```

show ap dot11 24ghz cleanair air-quality

To display the air-quality summary information and air-quality worst information for the 802.11 networks, use the **show ap dot11 cleanair** command.

show ap dot11 {24ghz | 5ghz | dual-band} cleanair {air-quality | config | device | summary}

Syntax Description		
24ghz	Displays the 2.4 GHz band.	
5ghz	Displays the 5 GHz band.	
dual-band	Displays 802.11 dual-band radios.	
cleanair	Displays cleanair configurations.	
air-quality	Displays the Cleanair Air-Quality (AQ) data for 2.4GHz band.	
device	Displays the CleanAir Interferers of device for 2.4GHz band.	
config	Displays CleanAir Configuration for 2.4GHz band.	
summary	Displays cleanair configurations for all 802.11a Cisco APs.	

Command Default None

Command Modes Any command mode

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

This example shows how to display the worst air-quality information for the 5 GHz band:

```
Device# show ap dot11 5ghz cleanair air-quality worst
```

```
AQ = Air Quality
DFS = Dynamic Frequency Selection
AP Name      Channel Avg AQ Min AQ Interferers DFS
-----
CISCO_AP3500 36      95      70      0          40
```

This example shows how to display the worst air-quality information for the 2.4 GHz band:

```
Device# show ap dot11 24ghz cleanair air-quality worst
```

```
AQ = Air Quality
DFS = Dynamic Frequency Selection
AP Name      Channel Avg AQ Min AQ Interferers DFS
-----
CISCO_AP3500 1        83      57      3          5
```

show ap dot11 24ghz cleanair air-quality

To display the air-quality summary information and air-quality worst information for the 802.11 networks, use the **show ap dot11 cleanair air-quality** command.

show ap dot11 {24ghz | 5ghz} cleanair air-quality {summary | worst}

Syntax Description	Option	Description
	24ghz	Displays the 2.4 GHz band.
	5ghz	Displays the 5 GHz band.
	summary	Displays a summary of 802.11 radio band air-quality information.
	worst	Displays the worst air-quality information for 802.11 networks.

Command Default None

Command Modes Any command mode

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

This example shows how to display the worst air-quality information for the 5 GHz band:

```
Device# show ap dot11 5ghz cleanair air-quality worst
```

```
AQ = Air Quality
DFS = Dynamic Frequency Selection
AP Name      Channel Avg AQ Min AQ Interferers DFS
-----
CISCO_AP3500 36      95      70      0          40
```

This example shows how to display the worst air-quality information for the 2.4 GHz band:

```
Device# show ap dot11 24ghz cleanair air-quality worst
```

```
AQ = Air Quality
DFS = Dynamic Frequency Selection
AP Name      Channel Avg AQ Min AQ Interferers DFS
-----
CISCO_AP3500 1        83      57      3          5
```

show ap dot11 cleanair config

To display the CleanAir configuration for the 802.11 networks, use the **show ap dot11 cleanair config** command.

show ap dot11 {24ghz | 5ghz} cleanair config

Syntax Description	24ghz Displays the 2.4 GHz band.				
	5ghz Displays the 5 GHz band.				
Command Default	None				
Command Modes	Any command mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Gibraltar 16.12.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.
Release	Modification				
Cisco IOS XE Gibraltar 16.12.1	This command was introduced.				

This example shows how to display the CleanAir configuration for the 2.4 GHz band:

```
Device# show ap dot11 24ghz cleanair config

```

show ap dot11 cleanair summary

To view CleanAir configurations for all 802.11a Cisco APs, use the **show ap dot11 cleanair summary** command.

show ap dot11 {24ghz | 5ghz} cleanair summary

Syntax Description		
	24ghz	Specifies the 2.4-GHz band
	5ghz	Specifies the 5-GHz band
	cleanair summary	Summary of CleanAir configurations for all 802.11a Cisco APs

Command Default None

Command Modes Any command mode

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

show ap dot11 dual-band summary

To view a brief summary of access points with dual-band radios, use the **show ap dot11 dual-band summary** command.

show ap dot11 dual-band summary

Syntax Description	This command has no keywords or arguments.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	Privileged EXEC
----------------------	-----------------

Command History	
------------------------	--

Example

The following example shows how to view brief summary of tag names:

```
Device# show ap dot11 dual-band summary
```

show ap environment

To see the AP environment information of all APs, use the **show ap environment** command.

show ap environment [**chassis** {*chassis-number* | **active** | **standby**} **R0**]

Syntax Description

chassis-number Enter the chassis number as either 1 or 2.

active R0 Active instance of the AP filters in Route-processor slot 0.

standby R0 Standby instance of the AP filters in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the AP environment information:

```
Device# show ap environment
```

show ap filters active

To see the details of active AP filters, use the **show ap filters active** command.

```
show ap filters active [chassis {chassis-number | active | standby} R0]
```

Syntax Description

chassis-number Chassis number as either 1 or 2.

active R0 Active instance of the active AP filters in Route-processor slot 0.

standby R0 Standby instance of the active AP filters in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the details of the active AP filters for the active instance:

```
Device# show ap filters active chassis active R0
```

show ap filters all

To see the details of all AP filters, use the **show ap filters all** command.

show ap filters all [**chassis** {*chassis-number* | **active** | **standby**} **R0**]

Syntax Description

chassis-number Enter the chassis number as either 1 or 2.

active R0 Active instance of the AP filters in Route-processor slot 0.

standby R0 Standby instance of the AP filters in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the details of all the AP filters for the active instance:

```
Device# show ap filters all chassis active R0
```

show ap fra

To see the flexible radio assignment (FRA) configurations in APs, use the **show ap fra** command.

```
show ap fra [chassis {chassis-number | active | standby} R0]
```

Syntax Description

chassis-number Chassis number as either 1 or 2.

active R0 Active instance in Route-processor slot 0.

standby R0 Standby instance in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the FRA configurations in APs:

```
Device# show ap fra
```

show ap gps location

To see the GPS location of all APs, use the **show ap gps location** command.

show ap gps location [**chassis** {*chassis-number* | **active** | **standby**} **R0**]

Syntax Description

chassis-number Enter the chassis number as either 1 or 2.

active R0 Active instance of the AP filters in Route-processor slot 0.

standby R0 Standby instance of the AP filters in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the GPS location of all APs:

```
Device# show ap gps location
```

show history channel interface dot11Radio all

To check channel change or trigger reason and history, use the **show history channel interface dot11Radio all** command.

show history channel interface dot11Radio all

Syntax Description	This command has no keywords or arguments.				
Command Default	None				
Command Modes	Privileged EXEC (#)				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Amsterdam 17.2.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Amsterdam 17.2.1	This command was introduced.
Release	Modification				
Cisco IOS XE Amsterdam 17.2.1	This command was introduced.				

Examples

This example shows how to check channel change or trigger reason and history:

```
Device# show history channel interface dot11Radio all

          Timestamp Slot Client count Channel Trigger
Fri May 31 12:57:04 2019    0         0      11 RRM-DCA
Fri May 31 13:10:02 2019    0         0       1 RRM-DCA
Fri May 31 12:57:04 2019    1         0      60 Manual
Fri May 31 13:00:16 2019    1         0     149   DFS
```

show ap link-encryption

To display the link encryption status, use the **show ap link-encryption** command.

show ap link-encryption[{**chassis** | {*chassis-number* | **active** | **standby**} | **R0**}]

Syntax Description	
<i>chassis-number</i>	Chassis number as either 1 or 2.
active R0	Active instance in Route-processor slot 0.
standby R0	Standby instance in Route-processor slot 0.

Command Default None

Command Modes Any command mode

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

This example show how to display the link-encryption status:

```
Device# show Cisco IOS XE Gibraltar 16.12.2s link-encryption
```

show ap lldp neighbors detail

To view the details of the AP Link Layer Discovery Protocol (LLDP) neighbor information on the controller, when the AP is connected to the third-party switch.

show ap lldp neighbors detail

Syntax Description	This command has no arguments.	
Command Default	None	
Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.
Usage Guidelines	None	

Example

The following example shows how to view the details of AP Link Layer Discovery Protocol (LLDP) neighbor information on the controller, when the AP is connected to the third-party switch:

```
Device# show ap lldp neighbors detail
Number of neighbors: 1
AP Name           : 9130-ap1
AP Interface      : GigabitEthernet0
-----
Neighbor MAC      : c89c.1dbl.1f80
Neighbor Name     : flex-ctrl-switch
System Description : Cisco IOS Software, C3750E Software (C3750E-UNIVERSALK9-M), Version

```

show ap lldp neighbors

To view the AP Link Layer Discovery Protocol (LLDP) neighbor information on the controller, when the AP is connected to the third-party switch.

show ap lldp neighbors

Syntax Description	This command has no arguments.
---------------------------	--------------------------------

Command Default	None
------------------------	------

Command Modes	Privileged EXEC
----------------------	-----------------

Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.

Usage Guidelines	None
-------------------------	------

Example

The following example shows how to view the AP Link Layer Discovery Protocol (LLDP) neighbor information on the controller, when the AP is connected to the third-party switch:

```
Device# show ap lldp neighbors
```

```
Capability Codes:
```

```
(R) Router, (B) Bridge, (T) Telephone, (C) DOCSIS Cable Device
(W) WLAN Access Point, (P) Repeater, (S) Station, (O) Other
```

AP Name	AP Interface	Neighbor Name	Neighbor MAC	Port ID	Mgmt. Address	Capabilities	Last updated time
9130-ap1	GigabitEthernet0	switch	cxxc.1dxx.1fxx	Gi1/0/15	None	B R	12/02/2020 09:15:48
9117-ap1	GigabitEthernet0	switch	cxxc.1dxx.1fxx	Gi1/0/19	None	B R	12/02/2020 09:15:47

show ap name lldp neighbors detail

To view the details of the AP Link Layer Discovery Protocol (LLDP) neighbor information on the controller, for a specific AP, when the AP is connected to the third-party switch.

show ap name *ap-name* lldp neighbors detail

Syntax Description	This command has no arguments.	
Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.
Usage Guidelines	None	

Example

The following example shows how to view the details of the AP Link Layer Discovery Protocol (LLDP) neighbor information on the controller, for a specific AP, when the AP is connected to the third-party switch:

```
Device# show ap name 9130-ap1 lldp neighbors detail
AP Name          : 9130-ap1

```

show ap name ntp status

To display the Network Time Protocol (NTP) status of an AP, use the **show ap name ntp status** command.

show ap name *ap-name* **ntp status**

Syntax Description	<i>ap-name</i> AP name.
---------------------------	-------------------------

Command Default	None
------------------------	------

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.6.1	This command was introduced.

Examples

The following example shows how to view the NTP status of an AP:

```
Device# show ap name AP-G1-230 ntp status
```

ap-name	enabled	v4/v6	IPAddress	Status	Stratum	LastSync	SyncOffset
AP-G1-230	Y	v4	198.51.100.5	AuthFail	4	1000	100

show ap ntp status

To display the Network Time Protocol (NTP) status for all the APs, use the **show ap name ntp status** command.

show ap ntp status

Syntax Description This command has no keywords and arguments.

Command Default None

Command Modes Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.6.1	This command was introduced.

Examples

The following example shows how to view the NTP status for all the APs:

```
Device# show ap ntp status
```

ap-name	enabled	v4/v6	IPAddress	Status	Stratum	LastSync	SyncOffset
AP-G1-230	Y	v4	198.51.100.5	AuthFail	2	Never	
AP-G1-231	Y	v4	198.51.100.10	Synced	3	1000	100
AP-G1-232	Y	v4	198.51.100.15	Synced	16	2000	50

show ap master list

To see the AP master list, use the **show ap master list** command.

```
show ap master list [{chassis | {chassis-number | active | standby} | R0}]
```

Syntax Description

chassis-number Chassis number as either 1 or 2.

active R0 Active instance in Route-processor slot 0.

standby R0 Standby instance in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the AP master list:

```
Device# show ap master list
```

show ap multicast mom (multicast over multicast)

To confirm if the APs receive multicast to multicast (mom) traffic sent by the controller, using CAPWAP multicast group, use the **show ap multicast mom** command.

Syntax Description	This command has no keywords and arguments.
---------------------------	---

Command Default	None
------------------------	------

Command Modes	Privileged EXEC
----------------------	-----------------

Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.2	This command was introduced.

This example shows how to confirm if the APs receive multicast to multicast traffic sent by the controller using CAPWAP multicast group:

```
Device# show ap multicast mom
```

AP Name	MOM-IP	TYPE	MOM-	STATUS
SS-E-1	IPv4		Up	
SS-E-2	IPv4		Up	
9130E-r3-sw2-g1012	IPv4		Up	
9115i-r3-sw2-te1-0-38	IPv4		Up	
AP9120-r3-sw3-Gi1-0-46	IPv4		Up	
ap3800i-r2-sw1-te2-0-2	IPv4		Up	

show ap name auto-rf

To display the auto-RF settings for a Cisco lightweight access point, use the **show ap name auto-rf** command.

```
show ap name ap-name auto-rf dot11 {24ghz | 5ghz | dual-band}
```

Syntax Description	<i>ap-name</i>	Name of the Cisco lightweight access point.
	24ghz	Displays the 2.4 GHz band.
	5ghz	Displays the 5 GHz band.
	dual-band	Displays dual band.
Command Default	None	
Command Modes	Privileged EXEC.	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

This example shows how to display auto-RF information for an access point:

```
Device# show ap name AP01 auto-rf dot11 24ghz

Number of Slots                : 2
AP Name                        : TSIM_AP-1

Persistent Interference Devices

show ap name ble detail

To display BLE management details, use the **show ap name ble detail** command.

show ap name *ap-name* **ble detail**

Syntax Description	<i>ap-name</i> Specifies the name of the AP.				
Command Default	None				
Command Modes	Privileged EXEC (#)				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Amsterdam 17.3.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Amsterdam 17.3.1	This command was introduced.
Release	Modification				
Cisco IOS XE Amsterdam 17.3.1	This command was introduced.				
Usage Guidelines	None				

Example

The following example shows how to display the BLE management details:

```
Device(config)# show ap name ap-name ble detail
```

show ap name cablemodem

To see cable modem information of an AP, use the **show ap name *ap-name* cablemodem** command.

```
show ap name ap-name cablemodem [chassis {chassis-number | active | standby} R0]
```

Syntax Description

<i>ap-name</i>	Name of the AP.
<i>chassis-number</i>	Enter the chassis number as either 1 or 2.
active R0	Active instance of the AP filters in Route-processor slot 0.
standby R0	Standby instance of the AP filters in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see cable modem information of an AP:

```
Device# show ap name my-ap cablemodem
```

show ap name config

To display common information and Ethernet VLAN tagging information for a specific Cisco lightweight access point, use the **show ap name config** command.

```
show ap name ap-name config {ethernet | general}
```

Syntax Description	<i>ap-name</i> Name of the Cisco lightweight access point.				
	ethernet Displays Ethernet tagging configuration information for an access point.				
	general Displays common information for an access point.				
Command Default	None				
Command Modes	Any command mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Gibraltar 16.12.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.
Release	Modification				
Cisco IOS XE Gibraltar 16.12.1	This command was introduced.				

This example shows how to display Ethernet tagging information for an access point:

```
Device# show ap name AP01 config ethernet
```

```
VLAN Tagging Information for AP01
```

This example shows how to display common information for an access point:

```
Device# show ap name AP01 config general
```

```

show ap name config slot

To display the configuration of a Cisco AP and also display the common information for a slot, use the **show ap name config slot** command.

show ap name *Cisco-ap-name* **slot** *0-3*

Syntax	Description
<i>Cisco-ap-name</i>	Specifies the name of the Cisco AP.
<i>0-3</i>	Specifies the slot ID.

Command Default None

Command Modes Any command mode

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

Example

This example shows how to display common information for a slot in an access point:

```
Device# show ap name Cisco-ap-name config slot 3
```

show ap name config ethernet

To see Ethernet related configuration information of an AP, use the **show ap name *ap-name* config ethernet** command.

show ap name *ap-name* config ethernet [**chassis** {*chassis-number* | **active** | **standby**} **R0**]

Syntax Description	
<i>ap-name</i>	Name of the AP.
<i>chassis-number</i>	Enter the chassis number as either 1 or 2.
active R0	Active instance of the AP filters in Route-processor slot 0.
standby R0	Standby instance of the AP filters in Route-processor slot 0.

Command Default None

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see Ethernet related configuration information of an AP:

```
Device# show ap name my-ap config ethernet
```

show ap name dot11

To display 802.11a or 802.11b configuration information that corresponds to specific Cisco lightweight access points, use the **show ap name dot11** command.

```
show ap name ap-name dot11 { 24ghz | 5ghz } { SI | airtime-fairness | call-control | cleanair | radio-reset | voice }
```

Syntax Description		
	<i>ap-name</i>	Name of the Cisco lightweight access point.
	24ghz	Displays the 2.4-GHz band.
	5ghz	Displays the 5-GHz band.
	SI	Displays the SI configurations.
	airtime-fairness	Displays the stats of 24Ghz or 5Ghz airtime-fairness.
	call-control	Displays the call control information.
	radio-reset	Displays radio-reset.
	slot	Displays slot information.
	voice	Displays voice information.

Command Default None

Command Modes Any command mode

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

This example shows how to display the cleanair air-quality that is associated with the access point:

```
Device# show ap name test-ap dot11 24ghz cleanair air-quality chassis active r0
```

show ap name environment

To see the AP environment information of an AP, use the **show ap name *ap-name* environment** command.

show ap name *ap-name* environment [**chassis** {*chassis-number* | **active** | **standby**} **R0**]

Syntax Description

<i>ap-name</i>	Name of the AP.
<i>chassis-number</i>	Enter the chassis number as either 1 or 2.
active R0	Active instance of the AP filters in Route-processor slot 0.
standby R0	Standby instance of the AP filters in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the AP environment information of an AP:

```
Device# show ap name my-ap environment
```

show ap name gps location

To see the GPS location of the AP, use the **show ap name gps location** command.

show ap name *ap-name* **gps location** [{*chassis-number* | **active** | **standby**} **R0**

Syntax Description	
<i>ap-name</i>	Name of the Access Point
gps	See the GPS information of a Cisco AP
location	Shows the Mesh linktest data
<i>chassis-number</i>	Enter the chassis number as either 1 or 2.
active R0	Active instance of the active AP filters in Route-processor slot 0.
standby R0	Standby instance of the configuration in Route-processor slot 0.

Command Default None

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the GPS location of an AP:

```
Device# show ap name mesh-profile-name gps location
```

show ap name mesh backhaul

To see mesh backhaul statistics of an AP, use the **show ap name *ap-name* mesh backhaul** command.

show ap name *ap-name* mesh backhaul [**chassis** {*chassis-number* | **active** | **standby**} **R0**]

Syntax Description

chassis-number Enter the chassis number as either 1 or 2.

active R0 Active instance of the AP filters in Route-processor slot 0.

standby R0 Standby instance of the AP filters in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see mesh backhaul statistics of an AP:

```
Device# show ap name mymeshap mesh backhaul
```

show ap name mesh bhrate

To see mesh backhaul data rate for an AP, use the **show ap name *ap-name* mesh bhrate** command.

show ap name *ap-name* mesh bhrate [**chassis** {*chassis-number* | **active** | **standby**} **R0**]

<i>ap-name</i>	Name of the AP.
<i>chassis-number</i>	Enter the chassis number as either 1 or 2.
active R0	Active instance of the AP filters in Route-processor slot 0.
standby R0	Standby instance of the AP filters in Route-processor slot 0.

Command Default None

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see mesh backhaul data rate for an AP:

```
Device# show ap name mymeshap mesh bhrate
```

show ap name mesh linktest

To see the mesh linktest data, use the **show ap name mesh linktest data** command.

show ap name *ap-name* **mesh linktest data** *dest-mac* [**chassis** {*chassis-number* | **active** | **standby**}**R0**]

Syntax Description	
<i>ap-name</i>	Name of the Access Point
linktest	Shows the Mesh linktest
data	Shows the Mesh linktest data
<i>dest-mac</i>	Enter the AP MAC address.
<i>chassis-number</i>	Enter the chassis number as either 1 or 2.
active R0	Active instance of the configuration in Route-processor slot 0.
standby R0	Standby instance of the configuration in Route-processor slot 0.

Command Default None

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the mesh linktest data of an AP:

```
Device# show ap name mesh-profile-name mesh linktest data 83-88-15-0C-83-72
```

show ap name mesh path

To see information about the mesh AP's path, use the **show ap name *ap-name* mesh path** command.

show ap name *ap-name* mesh path [**chassis** {*chassis-number* | **active** | **standby**} **R0**]

Syntax Description

chassis-number Enter the chassis number as either 1 or 2.

active R0 Active instance of the AP filters in Route-processor slot 0.

standby R0 Standby instance of the AP filters in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see information about the mesh AP's path:

```
Device# show ap name mymeshap mesh path
```

show ap name mesh stats

To see mesh statistics, use the **show ap name *ap-name* mesh stats** command.

```
show ap name ap-name [{packet error | queue | security}]
```

Syntax Description

<i>ap-name</i>	Name of the AP.
packet error	Mesh packet error statistics.
queue	Mesh queue statistics.
security	Mesh security statistics.
<i>chassis-number</i>	Enter the chassis number as either 1 or 2.
active R0	Active instance of the AP filters in Route-processor slot 0.
standby R0	Standby instance of the AP filters in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see mesh statistics:

```
Device# show ap name mymeshap mesh stats
```

show ap name wlan

To display the Basic Service Set Identifier (BSSID) value for each WLAN defined on an access point and to display WLAN statistics, use the **show ap name wlan** command.

```
show ap name ap-name wlan {dot11 {24ghz | 5ghz} | statistic}
```

Syntax Description	
<i>ap-name</i>	Name of the Cisco lightweight access point.
dot11	Displays 802.11 parameters.
24ghz	Displays 802.11b network settings.
5ghz	Displays 802.11a network settings.
statistic	Displays WLAN statistics.

Command Default None

Command Modes Any command mode

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

This example shows how to display BSSID information of an access point in an 802.11b network:

```
Device# show ap name AP01 wlan dot11 24ghz

Site Name                : default-group
Site Description         :

WLAN ID  Interface  BSSID
-----
1        default    00:00:20:00:02:00
12       default    00:00:20:00:02:0b
```

This example shows how to display WLAN statistics for an access point:

```
Device# show ap name AP01 wlan statistic

WLAN ID : 1
WLAN Profile Name : maria-open

EAP Id Request Msg Timeouts : 0
EAP Id Request Msg Timeouts Failures : 0
EAP Request Msg Timeouts : 0
EAP Request Msg Timeouts Failures : 0
EAP Key Msg Timeouts : 0
EAP Key Msg Timeouts Failures : 0

WLAN ID : 12
WLAN Profile Name : 24
```

```

show ap profile

To see overall status of Hyperlocation for an AP profile, use the **show ap profile** command.

```
show ap profile profile-name {detailed | hyperlocation {ble-beacon | detail | summary}} [chassis
{chassis-number | active | standby} R0]
```

Syntax Description

<i>profile-name</i>	AP profile name.
detailed	Shows the detailed parameters of the AP join profile.
hyperlocation	Shows Hyperlocation information for the AP profile.
ble-beacon	Show the list of configured BLE beacons for the AP profile.
detail	Shows detailed status of Hyperlocation for the AP profile.
summary	Shows overall status of Hyperlocation for the AP profile
<i>chassis-number</i>	Chassis number as either 1 or 2.
active R0	Active instance in Route-processor slot 0.
standby R0	Standby instance in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the overall status of Hyperlocation for an AP profile:

```
Device# show ap profile my-ap-profile detailed
```

show ap rf-profile name

To display the selected ap RF-Profile details, use the **show ap rf-profile name** command.

show ap rf-profile name *profile-name* **detail**

Syntax Description	<i>profile-name</i>	Name of the RF-Profile.
	detail	Show detail of selected RF Profile.
Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Denali 16.3.1	This command was introduced.
Usage Guidelines	None	

This example shows how to display the details of the selected RF-Profile.

```

show ap rf-profile summary

To display the ap RF-Profile summary, use the **show ap rf-profile summary** command.

show ap rf-profile summary

Syntax Description	summary	Show summary of RF Profiles
Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Denali 16.3.1	This command was introduced.
Usage Guidelines	None	

This example shows how to display the ap RF-Profile summary .

```
Device#show ap rf-profile summary
Number of RF Profiles : 1
```

RF Profile Name	Band	Description	Applied	State
doctest	2.4 GHz		No	Down

show ap summary

To display the status summary of all Cisco lightweight access points attached to the device, use the **show ap summary** command.

show ap summary

Syntax Description	This command has no keywords and arguments.
---------------------------	---

Command Default	None
------------------------	------

Command Modes	Any command mode
----------------------	------------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

Usage Guidelines	Use this command to display a list that contains each lightweight access point name, number of slots, manufacturer, MAC address, location, and the device port number.
-------------------------	--

This example shows how to display a summary of all connected access points:

```
Controller# show ap summary
```

```
Number of APs: 1
```

```
Global AP User Name: Cisco
```

```
Global AP Dot1x User Name: Not configured
```

AP Name	AP Model	Ethernet MAC	Radio MAC	State
3602a	3502I	003a.99eb.3fa8	d0c2.8267.8b00	Registered

show ap tag sources

To see AP tag sources with priorities, use the **show ap tag sources** command.

```
show ap tag sources [chassis {chassis-number | active | standby} R0]
```

Syntax Description

chassis-number Chassis number as either 1 or 2.

active R0 Active instance of the AP filters in Route-processor slot 0.

standby R0 Standby instance of the AP filters in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the AP tag sources with priorities for the active instance:

```
Device# show ap tag sources chassis active R0
```

show ap tag summary

To view brief summary of tag names, use the **show ap tag summary** command.

show ap tag summary

Syntax Description	This command has no keywords or arguments.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	Privileged EXEC
----------------------	-----------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Example

The following example shows how to view brief summary of tag names:

```
Device# show ap tag summary
```

show ap timezone

To check the AP timezone information, use the **show ap timezone** command.

show ap timezone

Syntax Description	This command has no keywords and arguments.
---------------------------	---

Command Default	None
------------------------	------

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.6.1	This command was introduced.

Examples

The following example shows how to check the AP timezone information:

```
Device# show ap timezone

AP Name   Status   Offsets (h/m)
-----
AP1       Disabled 0:0
AP2       Enabled  1:0
```

show ap upgrade

To see AP upgrade information, use the **show ap upgrade** command.

show ap upgrade [{**name** *ap-upgrade-report-name* | **summary** | **chassis** {*chassis-number* | **active** | **standby**}}]

Syntax Description

name <i>ap-upgrade-report-name</i>	Enter the name of the AP upgrade report.
summary	Shows a summary of AP upgrade information.
<i>chassis-number</i>	Enter the chassis number as either 1 or 2.
active R0	Active instance in Route-processor slot 0.
standby R0	Standby instance in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see a summary of the AP upgrade information:

```
Device# show ap upgrade summary
```

show ap upgrade method

To verify the status of the configuration of the image download over HTTPS method, use the **show ap upgrade method** command.

show ap upgrade method

Syntax Description This command has no keywords or arguments.

Command Default None

Command Modes Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Dublin 17.11.1	This command was introduced.

Examples

The following example shows how to verify the status of HTTPS image download configuration:

```
Device# show ap upgrade method
```

```
AP upgrade method https : Enabled
```

show arp

To view the ARP table, use the **show arp** command.

show arp

Syntax Description

arp Shows ARP table

Command Modes

User EXEC (>)
Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

The following example shows a sample output of the command:

```
Device# show arp
Address Age (min)      Hardware Addr
 9.11.8.1             0 84:80:2D:A0:D2:E6
9.11.32.111          0 3C:77:E6:02:33:3F
```

show arp summary

To see the ARP table summary, use the **show arp summary** command.

```
show arp summary
```

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the ARP table summary:

```
Device# show arp summary
```

show ap upgrade site

To view the upgrade site-related information, use the **show ap upgrade site** command.

show ap upgrade site [**summary**]

Syntax Description	summary (Optional) Displays a summary of access point (AP) upgrade on individual sites.				
Command Default	None				
Command Modes	Privileged EXEC (#)				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Cupertino 17.9.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Cupertino 17.9.1	This command was introduced.
Release	Modification				
Cisco IOS XE Cupertino 17.9.1	This command was introduced.				

Examples

The following example shows how to view the upgrade site-related information:

```
Device# show ap upgrade site

Site-filtered AP upgrade report data
=====
Source controller: Controller1
Destination controller: Controller2
Site-filters present: Yes

AP image upgrade site summary
-----
Operation: N+1 move

Site Tag                               Status
-----
site1                                   In Progress

AP upgrade reports linked to these site-filters
-----

Start time           Operation type           Report name
-----
01/30/2022 10:34:36 IST AP image upgrade/move CLI AP_upgrade_to_Controller2_3002022103435
```

show avc client

To display information about top number of applications, use the **show avc client** command in privileged EXEC mode.

show avc client *client-mac* **top n application** [**aggregate** | **upstream** | **downstream**]

Syntax Description

client *client-mac* Specifies the client MAC address.

top n application Specifies the number of top "N" applications for the given client.

Command Default

No default behavior or values.

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

The following is sample output from the **show avc client** command:

```
Device# sh avc client 0040.96ae.65ec top 10 application aggregate
```

Cumulative Stats:

No.	AppName	Packet-Count	Byte-Count	AvgPkt-Size	usage%
1	skinny	7343	449860	61	94
2	unknown	99	13631	137	3
3	dhcp	18	8752	486	2
4	http	18	3264	181	1
5	tftp	9	534	59	0
6	dns	2	224	112	0

Last Interval (90 seconds) Stats:

No.	AppName	Packet-Count	Byte-Count	AvgPkt-Size	usage%
1	skinny	9	540	60	100

show avc wlan

To display information about top applications and users using the applications, use the **show avc wlan** command in privileged EXEC mode.

show avc wlan ssid top n application [aggregate | upstream | downstream]

Syntax Description	Parameter	Description
	wlan ssid	Specifies the Service Set Identifier (SSID) for WLAN.
	top n application	Specifies the number of top "N" applications.

Command Default No default behavior or values.

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

The following is sample output from the **show avc wlan** command:

```
Device# show avc wlan Lobby_WLAN top 10 application aggregate
```

Cumulative Stats:

No.	AppName	Packet-Count	Byte-Count	AvgPkt-Size	usage%
1	ssl	10598677	1979525706	997	42

show chassis

To see the chassis information, use the **show chassis** command.

```
show chassis [{1 | 2} | detail | mode | neighbors | ha-status {active | local | standby}]
```

Syntax Description

{1 2}	Chassis number as 1 or 2 to see the information about the relevant chassis.
detail	Shows detailed information about the chassis.
mode	Shows information about the chassis mode.
neighbors	Shows information about the chassis neighbors.
ha-status	Option to see information about the High Availability (HA) status.
active	Shows HA status on the chassis that is in active state.
local	Shows HA status on the local .
standby	Shows HA status on the chassis that is in standby state.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the HA status on the active chassis:

```
Device# show chassis ha-status active
```

show checkpoint

To display information about the Checkpoint Facility (CF) subsystem, use the **show checkpoint** command.

show checkpoint { **clients** *client-ID* <0-381> | **entities** *entity-ID* <1-7> | **statistics** **buffer-usage** }

Syntax Description

clients	Displays detailed information about checkpoint clients.
entities	Displays detailed information about checkpoint entities.
statistics	Displays detailed information about checkpoint statistics.
buffer-usage	Displays the checkpoint statistics of clients using large number of buffers.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
	This command was introduced.

This example shows how to display all the CF clients.

show cts role-based counters

To clear all role-based counters on the AP, use the **show cts role-based counters** command:

```
show cts role-based counters
```

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes Privileged EXEC (#)

Command History	Release	Modification
	Cisco Amsterdam 17.1.1	This command was introduced.

Examples

The following example shows the clear all role-based counters on the AP:

```
Device# show cts role-based counters
```

```

From  To   SW-Denied HW-Denied SW-Permitt HW-Permitt SW-Monitor HW-Monitor

```

show flexconnect office-extend diagnostics

To display the results of the network diagnostics for all flexconnect OfficeExtend AP, use the **show flexconnect office-extend diagnostics** command.

show flexconnect office-extend diagnostics

Syntax Description	This command has no keywords or arguments.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.

Usage Guidelines

To get periodic details for latency (current, minimum, or maximum) ensure that you enable link-latency under the ap profile, as given in the following example:

```
Device(config)# ap profile default-ap-profile
Device(config-ap-profile)# link-latency
```

If the above configuration is not in place, you will only see the following output:

```
Summary of OfficeExtend AP Link Latency

CAPWAP Latency Heartbeat

Current: current latency (ms)
Min: minimum latency (ms)
Max: maximum latency (ms)

Link Test

Upload: DTLS Upload (Mbps)
Latency: DTLS Link Latency (ms)
Jitter: DTLS Link Jitter (ms)

AP Name Last Latency Heartbeat from AP Current Max Min Last Link Test Run Upload Latency
Jitter
-----
ap-18 Disabled - - - 12/04/20 11:08:58 16 3
0
```

Examples

This following example shows how to display the network diagnostics information for OfficeExtend AP.

```
Device# show flexconnect office-extend diagnostics

Summary of OfficeExtend AP Link Latency

CAPWAP Latency Heartbeat

Current: current latency (ms)
```

Min: minimum latency (ms)
 Max: maximum latency (ms)

Link Test

Upload: DTLS Upload (Mbps)
 Latency: DTLS Link Latency (ms)
 Jitter: DTLS Link Jitter (ms)

AP Name	Last Latency	Heartbeat from AP	Current Max	Min	Last Link Test Run	Upload Latency	Jitter
ap-18	1 minute 1 second		0	0	0	12/04/20 09:19:48	8 2
							0

show flow exporter

To display flow exporter status and statistics, use the **show flow exporter** command in privileged EXEC mode.

```
show flow exporter [{export-ids netflow-v9} [name] exporter-name [{statistics | templates}] | statistics | templates}]
```

Syntax Description

export-ids netflow-v9	(Optional) Displays the NetFlow Version 9 export fields that can be exported and their IDs.
name	(Optional) Specifies the name of a flow exporter.
<i>exporter-name</i>	(Optional) Name of a flow exporter that was previously configured.
statistics	(Optional) Displays statistics for all flow exporters or for the specified flow exporter.
templates	(Optional) Displays template information for all flow exporters or for the specified flow exporter.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

The following example displays the status and statistics for all of the flow exporters configured on a device:

```
Device# show flow exporter
Flow Exporter FLOW-EXPORTER-1:
  Description:           Exports to the datacenter
  Export protocol:       NetFlow Version 9
  Transport Configuration:
    Destination IP address: 192.168.0.1
    Source IP address:     192.168.0.2
    Transport Protocol:    UDP
    Destination Port:      9995
    Source Port:           55864
    DSCP:                  0x0
    TTL:                   255
    Output Features:       Used
```

This table describes the significant fields shown in the display:

Table 1: show flow exporter Field Descriptions

Field	Description
Flow Exporter	The name of the flow exporter that you configured.

Field	Description
Description	The description that you configured for the exporter, or the default description User defined.
Transport Configuration	The transport configuration fields for this exporter.
Destination IP address	The IP address of the destination host.
Source IP address	The source IP address used by the exported packets.
Transport Protocol	The transport layer protocol used by the exported packets.
Destination Port	The destination UDP port to which the exported packets are sent.
Source Port	The source UDP port from which the exported packets are sent.
DSCP	The differentiated services code point (DSCP) value.
TTL	The time-to-live value.
Output Features	Specifies whether the output-features command, which causes the output features to be run on Flexible NetFlow export packets, has been used or not.

The following example displays the status and statistics for all of the flow exporters configured on a device:

```
Device# show flow exporter name FLOW-EXPORTER-1 statistics
Flow Exporter FLOW-EXPORTER-1:
  Packet send statistics (last cleared 2w6d ago):
    Successfully sent:          0                (0 bytes)
```

show flow interface

To display the configuration and status for an interface, use the **show flow interface** command in privileged EXEC mode.

show flow interface [*type number*]

Syntax Description	<i>type</i> (Optional) The type of interface on which you want to display accounting configuration information.
	<i>number</i> (Optional) The number of the interface on which you want to display accounting configuration information.

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

Examples

The following example displays the accounting configuration on Ethernet interfaces 0/0 and 0/1:

```
Device# show flow interface gigabitethernet1/0/1

Interface Ethernet1/0
  monitor:          FLOW-MONITOR-1
  direction:        Output
  traffic(ip):       on
Device# show flow interface gigabitethernet1/0/2
Interface Ethernet0/0
  monitor:          FLOW-MONITOR-1
  direction:        Input
  traffic(ip):       sampler SAMPLER-2#
```

The table below describes the significant fields shown in the display.

Table 2: show flow interface Field Descriptions

Field	Description
Interface	The interface to which the information applies.
monitor	The name of the flow monitor that is configured on the interface.
direction:	The direction of traffic that is being monitored by the flow monitor. The possible values are: <ul style="list-style-type: none"> • Input—Traffic is being received by the interface. • Output—Traffic is being transmitted by the interface.

Field	Description
traffic(ip)	<p data-bbox="503 294 1201 325">Indicates if the flow monitor is in normal mode or sampler mode.</p> <p data-bbox="503 336 763 367">The possible values are:</p> <ul data-bbox="535 388 1518 504" style="list-style-type: none"><li data-bbox="535 388 1006 420">• on—The flow monitor is in normal mode.<li data-bbox="535 441 1518 504">• sampler—The flow monitor is in sampler mode (the name of the sampler will be included in the display).

show flow monitor

To display the status and statistics for a flow monitor, use the **show flow monitor** command in privileged EXEC mode.

Syntax Description	name	(Optional) Specifies the name of a flow monitor.
	<i>monitor-name</i>	(Optional) Name of a flow monitor that was previously configured.
	cache	(Optional) Displays the contents of the cache for the flow monitor.
	format	(Optional) Specifies the use of one of the format options for formatting the display output.
	csv	(Optional) Displays the flow monitor cache contents in comma-separated variables (CSV) format.
	record	(Optional) Displays the flow monitor cache contents in record format.
	table	(Optional) Displays the flow monitor cache contents in table format.
	statistics	(Optional) Displays the statistics for the flow monitor.

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

Usage Guidelines The **cache** keyword uses the record format by default.

The uppercase field names in the display output of the **show flowmonitor monitor-name cache** command are key fields that uses to differentiate flows. The lowercase field names in the display output of the **show flow monitor monitor-name cache** command are nonkey fields from which collects values as additional data for the cache.

Examples

The following example displays the status for a flow monitor:

```
Device# show flow monitor FLOW-MONITOR-1

Flow Monitor FLOW-MONITOR-1:
  Description:      Used for basic traffic analysis
  Flow Record:     flow-record-1
  Flow Exporter:   flow-exporter-1
                  flow-exporter-2

Cache:
  Type:            normal
  Status:          allocated
  Size:            4096 entries / 311316 bytes
  Inactive Timeout: 15 secs
  Active Timeout:  1800 secs
```

This table describes the significant fields shown in the display.

Table 3: show flow monitor monitor-name Field Descriptions

Field	Description
Flow Monitor	Name of the flow monitor that you configured.
Description	Description that you configured or the monitor, or the default description User defined.
Flow Record	Flow record assigned to the flow monitor.
Flow Exporter	Exporters that are assigned to the flow monitor.
Cache	Information about the cache for the flow monitor.
Type	Flow monitor cache type. The value is always normal, as it is the only supported cache type.
Status	Status of the flow monitor cache. The possible values are: <ul style="list-style-type: none"> • allocated—The cache is allocated. • being deleted—The cache is being deleted. • not allocated—The cache is not allocated.
Size	Current cache size.
Inactive Timeout	Current value for the inactive timeout in seconds.
Active Timeout	Current value for the active timeout in seconds.

The following example displays the status, statistics, and data for the flow monitor named FLOW-MONITOR-1:

This table describes the significant fields shown in the display.

The following example displays the status, statistics, and data for the flow monitor named FLOW-MONITOR-1 in a table format:

The following example displays the status, statistics, and data for the flow monitor named FLOW-MONITOR-IPv6 (the cache contains IPv6 data) in record format:

The following example displays the status and statistics for a flow monitor:

show flow record

To display the status and statistics for a flow record, use the **show flow record** command in privileged EXEC mode.

```
show flow record [{name] record-name}]
```

Syntax Description	name (Optional) Specifies the name of a flow record.
	<i>record-name</i> (Optional) Name of a user-defined flow record that was previously configured.
Command Default	None
Command Modes	Privileged EXEC
Command History	Release
	Modification
	Cisco IOS XE Gibraltar 16.12.1 This command was introduced.

The following example displays the status and statistics for FLOW-RECORD-1:

```
Device# show flow record FLOW-RECORD-1
flow record FLOW-RECORD-1:
  Description:      User defined
  No. of users:    0
  Total field space: 24 bytes
  Fields:
    match ipv6 destination address
    match transport source-port
    collect interface input
```

show interfaces

To display the administrative and operational status of all interfaces or for a specified interface, use the **show interfaces** command in privileged EXEC mode.

```
show interfaces [{interface-id | vlan vlan-id}] [{accounting | capabilities [module number] | debounce
| description | etherchannel | flowcontrol | private-vlan mapping | pruning | stats | status [{err-disabled}]
| trunk}]
```

Syntax	Description
<i>interface-id</i>	(Optional) ID of the interface. Valid interfaces include physical ports (including type, stack member, module, and port number) and port channels. The port channel range is 1 to 48.
vlan <i>vlan-id</i>	(Optional) VLAN identification. The range is 1 to 4094.
accounting	(Optional) Displays accounting information on the interface, including active protocols and input and output packets and octets. Note The display shows only packets processed in software; hardware-switched packets do not appear.
capabilities	(Optional) Displays the capabilities of all interfaces or the specified interface, including the features and options that you can configure on the interface. Though visible in the command line help, this option is not available for VLAN IDs.
module <i>number</i>	(Optional) Displays capabilities of all interfaces on the switch or specified stack member. This option is not available if you entered a specific interface ID.
description	(Optional) Displays the administrative status and description set for an interface.
etherchannel	(Optional) Displays interface EtherChannel information.
flowcontrol	(Optional) Displays interface flow control information.
private-vlan mapping	(Optional) Displays private-VLAN mapping information for the VLAN switch virtual interfaces (SVIs). This keyword is not available if the switch is running the LAN base feature set.
pruning	(Optional) Displays trunk VTP pruning information for the interface.
stats	(Optional) Displays the input and output packets by switching the path for the interface.
status	(Optional) Displays the status of the interface. A status of unsupported in the Type field means that a non-Cisco small form-factor pluggable (SFP) module is inserted in the module slot.

err-disabled	(Optional) Displays interfaces in an error-disabled state.
trunk	(Optional) Displays interface trunk information. If you do not specify an interface, only information for active trunking ports appears.

Note Though visible in the command-line help strings, the **crb**, **fair-queue**, **irb**, **mac-accounting**, **precedence**, **random-detect**, **rate-limit**, and **shape** keywords are not supported.

Command Default None

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

Usage Guidelines

The **show interfaces capabilities** command with different keywords has these results:

- Use the **show interface capabilities module *number*** command to display the capabilities of all interfaces on that in the stack. If there is no with that module number in the stack, there is no output.
- Use the **show interfaces *interface-id* capabilities** to display the capabilities of the specified interface.
- Use the **show interfaces capabilities** (with no module number or interface ID) to display the capabilities of all interfaces in the stack.

This is an example of output from the **show interfaces** command for an interface on stack member 3:

```
Device#show interfaces gigabitEthernet 0
GigabitEthernet0 is up, line protocol is up
Hardware is MEWLC management port, address is 0000.5e00.0101 (bia 0000.0000.0000)
Internet address is 20.61.1.12/16
MTU 1500 bytes, BW 1000000 Kbit/sec, DLY 10 usec,
reliability 255/255, txload 1/255, rxload 1/255
Encapsulation ARPA, loopback not set
Keepalive set (10 sec)
Unknown, Unknown, media type is unknown media type
output flow-control is unsupported, input flow-control is unsupported
ARP type: ARPA, ARP Timeout 04:00:00
Last input 03:06:36, output 00:00:07, output hang never
Last clearing of "show interface" counters never
Input queue: 0/75/0/0 (size/max/drops/flushes); Total output drops: 0
Queueing strategy: fifo
Output queue: 0/40 (size/max)
5 minute input rate 0 bits/sec, 0 packets/sec
5 minute output rate 0 bits/sec, 0 packets/sec
0 packets input, 0 bytes, 0 no buffer
Received 0 broadcasts (0 IP multicasts)
0 runts, 0 giants, 0 throttles
0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored
0 watchdog, 0 multicast, 0 pause input
0 packets output, 0 bytes, 0 underruns
```

```
0 output errors, 0 collisions, 1 interface resets
0 unknown protocol drops
0 babbles, 0 late collision, 0 deferred
0 lost carrier, 0 no carrier, 0 pause output
0 output buffer failures, 0 output buffers swapped out
```

This is an example of output from the **show interfaces *interface* description** command when the interface has been described as *Connects to Marketing* by using the **description** interface configuration command:

```
Device# show interfaces gigabitethernet1/0/2 description
Interface          Status      Protocol Description
Gi1/0/2            up          down      Connects to Marketing
```

This is an example of output from the **show interfaces *interface-id* pruning** command when pruning is enabled in the VTP domain:

```
Device# show interfaces gigabitethernet1/0/2 pruning
Port      Vlans pruned for lack of request by neighbor
Gi1/0/2   3,4

Port      Vlans traffic requested of neighbor
Gi1/0/2   1-3
```

This is an example of output from the **show interfaces stats** command for a specified VLAN interface:

```
Device# show interfaces vlan 1 stats
Switching path  Pkts In   Chars In   Pkts Out   Chars Out
  Processor    1165354   136205310   570800     91731594
  Route cache      0         0           0           0
  Total        1165354   136205310   570800     91731594
```

These are examples of output from the **show interfaces status** command for a specific interface when private VLANs are configured. Port 22 is configured as a private-VLAN host port. It is associated with primary VLAN 20 and secondary VLAN 25:

```
Device# show interfaces gigabitethernet1/0/22 status
Port      Name      Status      Vlan      Duplex      Speed      Type
Gi1/0/22          connected  20,25     a-full    a-100      10/100BaseTX
```

In this example, port 20 is configured as a private-VLAN promiscuous port. The display shows only the primary VLAN 20:

```
Device# show interfaces gigabitethernet1/0/20 status
Port      Name      Status      Vlan      Duplex      Speed      Type
Gi1/0/20          connected  20        a-full    a-100      10/100BaseTX
```

This is an example of output from the **show interfaces status err-disabled** command. It displays the status of interfaces in the error-disabled state:

```
Device# show interfaces status err-disabled
Port      Name      Status      Reason
Gi1/0/2          err-disabled  gbic-invalid
Gi2/0/3          err-disabled  dtp-flap
```

This is an example of output from the **show interfaces *interface-id* pruning** command:

```
Device# show interfaces gigabitethernet1/0/2 pruning
Port Vlans pruned for lack of request by neighbor
```

```
Device# show interfaces gigabitethernet1/0/1 trunk
Port      Mode      Encapsulation  Status      Native vlan
Gi1/0/1   on        802.1q         other       10

Port      Vlans allowed on trunk
Gi1/0/1   none

Port      Vlans allowed and active in management domain
Gi1/0/1   none

Port      Vlans in spanning tree forwarding state and not pruned
Gi1/0/1   none
```

show install package

To view the install package details, use the **show install package** command.

show install package

Syntax Description	This command has no arguments.	
Command Default	None	
Command Modes	Global configuration mode	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.1.1s	This command was introduced.

Example

This example shows how to view the install package details:

```
Device#show install package
```

show install rollback

To view the package information for a rollback point, use the **show install rollback** command.

show install rollback

Syntax Description	This command has no arguments.	
Command Default	None	
Command Modes	Global configuration mode	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.1.1s	This command was introduced.

Example

This example shows how to view the package information for a rollback point:

```
Device#show install rollback
```

show install summary

To view the install manager summary, use the **show install summary** command.

show install summary

Syntax Description	This command has no arguments.	
Command Default	None	
Command Modes	Global configuration mode	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.1.1s	This command was introduced.

Example

This example shows how to view the install summary information:

```
Device#show install summary
```

show ip

To view the IP information, use the **show ip** command.

Syntax	Description
access-lists	Lists the IP access lists
interface	Displays the IP interface status and configuration
brief	Displays the brief summary of IP status and configuration
route	Displays the IP routing table
tunnel	Displays the IP tunnel information
eogre	Displays the EoGRE tunnel information
domain	Displays the EoGRE tunnel domain information
forwarding-table	Displays the EoGRE tunnel encapsulation and decapsulation information
gateway	Displays the EoGRE tunnel gateway information
fabric	Displays the IP fabric tunnel information
summary	Displays the information for all tunnels

Command Modes
User EXEC (>)
Privileged EXEC (#)

Command History	Release	Modification
	8.1.111.0	This command was introduced.

The following example shows how to view information about the lists the IP access lists:

```
cisco-wave2-ap# show ip access-lists
```

show ip nbar protocol-id

To see NBAR protocol classification ID, use the **show ip nbar protocol-id** command.

```
show ip nbar protocol-id name
```

Syntax Description	protocol-id	The protocol classification ID.
	name	Host server name
Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE 16.12.1	This command was introduced.

Examples

The following example shows how to see the NBAR protocol classification ID:

```
Device# show ip nbar protocol-id name
```

show ldap attributes

To view information about the default LDAP attribute mapping, use the **show ldap attributes** command.

show ldap attributes

Syntax Description	This command has no arguments.	
Command Default	None	
Command Modes	Global configuration	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

This example shows how to view information about the default LDAP attribute mapping:

```

Device# show ldap attributes
LDAP Attribute                               Format      AAA Attribute
=====
airespaceBwDataBurstContract                Ulong      bsn-data-bandwidth-burst-contr

```

show ldap server

To view the LDAP server state information and various other counters for the server, use the **show ldap server** command.

show ldap server

Syntax Description

This command has no arguments.

Command Default

None

Command Modes

Global configuration

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

This example shows how to view the LDAP server state information and various other counters for the server:

```
Device# show ldap server
```

show license air entities

To display information about active APs, new APs, and deleted APs in connection with a Cisco Catalyst Wireless Controller, enter the **show license air entities** command in privileged EXEC mode.

show license air entities { **added** | **bulk** | **deleted** | **no-change** | **summary** }

Syntax Description

added	Displays the list of newly reported APs. A newly added AP is one that was not listed in the last RUM report that the product instance generated.
bulk	Displays the list of all currently active APs for the product instance
deleted	Displays the list of deleted APs. A delete AP is one that was listed as active APs in the last RUM report that the product instance generated but is now disconnected.
no-change	Displays the list of APs where there has been no change in the status since the last report.
summary	Displays the RUM report generation particulars and information about active APs, new APs, and deleted APs, and indicates by when an acknowledgement (ACK) must be installed on the product instance.

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
Cisco IOS XE Amsterdam 17.3.2a	Command output was updated to display information relating to Smart Licensing Using Policy.

Usage Guidelines

Smart Licensing: If the software version on the device is Cisco IOS XE Amsterdam 17.3.1 or an earlier release, command output displays fields pertinent to Smart Licensing.

Smart Licensing Using Policy: If the software version on the device is Cisco IOS XE Amsterdam 17.3.2 or a later release, command output displays fields pertinent to Smart Licensing Using Policy.

Examples

For information about fields shown in the display for the **show license air entities summary** command, see [Table 4: show license air entities summary Field Descriptions, on page 122](#).

For sample output, see

- [#unique_601 unique_601_Connect_42_section_gtj_hjm_frb](#)
- [show license air entities summary on a Cisco Catalyst 9800-L Wireless Controller, on page 123](#)

Table 4: show license air entities summary Field Descriptions

Field	Description
Last license report time	When the last RUM report was generated, in the local time zone.

Field	Description
Upcoming license report time	When the next RUM report will be generated, in the local time zone.
No. of APs active at last report	Total number of APs listed as active APs in the last RUM report that was generated.
No. of APs newly added with last report	Number of new APs in the last RUM report that was generated. For example, if the number displayed here is 2, this means the <i>last but one</i> RUM report did not list these 2 APs, and are therefore newly added in the last RUM report that the product instance generated.
No. of APs deleted with last report	Total number of APs deleted as of the last RUM report that was generated. For example, if the number displayed here is 2, this means 2 APs were in the <i>last but one</i> RUM report, but were deleted in the <i>last</i> RUM report was generated.

show license air entities summary on a Cisco Catalyst 9800-L Wireless Controller

The following is sample output on a Cisco Catalyst 9800-L Wireless Controller. Note how the output on this device does not display the `License Ack expected within` field. Reporting requirements on all Cisco Catalyst Wireless Controllers (except Cisco Catalyst 9800-CL Wireless Controller) are as per the standard guidelines in the Smart Licensing Using Policy environment: Reporting is required if the policy (**show license status**) or system messages indicate that it is.

```
Device# show license air entities summary
Upcoming license report time.....: 15:13:27.403 IST Tue Oct 26 2021
No. of APs active at last report.....: 1
No. of APs newly added with last report.....: 1
No. of APs deleted with last report.....: 0
```

show license all

To display all licensing information enter the **show license all** command in Privileged EXEC mode. This command displays status, authorization, UDI, and usage information, all combined.

show license all

Syntax Description

This command has no keywords or arguments

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
Cisco IOS XE Amsterdam 17.3.2a	Command output was updated to display information relating to Smart Licensing Using Policy. Command output no longer displays Smart Account and Virtual account information.
Cisco IOS XE Cupertino 17.7.1	The output of the command was enhanced to display the following information: <ul style="list-style-type: none"> • RUM report statistics, in section <code>Usage Report Summary</code>. • Smart Account and Virtual Account information, in section <code>Account Information</code>.

Usage Guidelines

Smart Licensing: If the software version on the device is Cisco IOS XE Amsterdam 17.3.1 or an earlier release, command output displays fields pertinent to Smart Licensing.

Smart Licensing Using Policy: If the software version on the device (also referred to as a product instance) is Cisco IOS XE Amsterdam 17.3.2 or a later release, command output displays fields pertinent to Smart Licensing Using Policy.

This command concatenates the output of other **show license** commands, enabling you to display different kinds of licensing information together. For field descriptions, refer to the corresponding commands in the links provided below.

The `Smart Licensing Status` and `Account Information` sections of the **show license all** command corresponds with the output of the [show license status, on page 145](#) command.

The `License Usage` section of the **show license all** command corresponds with the output of the [show license usage, on page 174](#) command.

The `Product Information` section of the **show license all** command corresponds with the output of the [show license udi, on page 173](#) command.

The `Agent Version` section of the **show license all** command displays the Smart Agent version and is available only in this command.

The `License Authorizations` section of the **show license all** command corresponds with the output of the [show license authorization, on page 130](#) command.

The `Usage Report Summary` section of the **show license all** command corresponds with the output in the [show license tech, on page 158](#) command.

Examples

For sample output, see:

[Example: show license all \(Cisco Catalyst 9800-CL Wireless Controllers, 17.7.1\), on page 125](#)

[Example: show license all \(Cisco Catalyst 9800-CL Wireless Controllers\), on page 126](#)

Example: show license all (Cisco Catalyst 9800-CL Wireless Controllers, 17.7.1)

The following is sample output of the **show license all** command, on a product instance where the software version is Cisco IOS XE Cupertino 17.7.1. Note the addition of the two new sections in this release: `Account Information` and `Usage Report Summary`:

```
Device# show license all

show license authorization

To display authorization-related information for (export-controlled and enforced) licenses, enter the **show license authorization** command in privileged EXEC mode.

show license authorization

Syntax Description	This command has no keywords or arguments	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.3.2a	This command was introduced.
Usage Guidelines	Only export-controlled or enforced licenses require authorization before use.	
	While there are no export-controlled or enforced licenses on Cisco Catalyst Wireless Controllers, you can use this command to display migrated SLR authorization codes.	

Examples

See [Table 5: show license authorization Field Descriptions, on page 131](#) for information about fields shown in the display.

See [show license authorization Displaying Migrated Authorization Code, on page 133](#) for sample output.

Table 5: show license authorization Field Descriptions

Field	Description
Overall Status	<p>Header for UDI information for all product instances in the set-up, the type of authorization that is installed, and configuration errors, if any.</p> <p>In a High Availability set-up, all UDIs in the set-up are listed.</p>
Active: Status:	<p>The active product instance UDI, followed by the status of the authorization code installation for this UDI.</p> <p>If the status indicates that the authorization code is installed and there is a confirmation code, this is also displayed.</p>
Standby: Status:	<p>The standby product instance UDI, followed by the status of the authorization code installation for this UDI.</p> <p>If the status indicates that the authorization code is installed and there is a confirmation code, this is also displayed.</p>
Member: Status:	<p>The member product instance UDI, followed by the status of the authorization code installation for this UDI.</p> <p>If the status indicates that the authorization code is installed and there is a confirmation code, this is also displayed.</p>
ERROR:	<p>Configuration errors or discrepancies in the High Availability set-up, if any.</p>

Field	Description
Authorizations	<p>Header for detailed license authorization information. All licenses, their enforcement types, and validity durations are displayed. Errors are displayed for each product instance if its authorization or mode does not match what is installed on the active.</p> <p>This section is displayed only if the product instance is using a license with an authorization code.</p>
():	License name and a shortened form of the license name.
Description	License description.
Total available count:	<p>Total count of licenses that are available to consume.</p> <p>This includes licenses of all durations (perpetual and subscription), including expired subscription licenses, for all the product instances in a High Availability setup.</p>
Enforcement type	<p>Enforcement type for the license. This may be one of the following:</p> <ul style="list-style-type: none"> • Enforced • Not enforced • Export-Controlled
Term information:	

Field		Description
		<p>Header providing license duration information. The following fields maybe included under this header:</p> <ul style="list-style-type: none"> • Active: The active product instance UDI, followed by the status of the authorization code installation for this UDI. • Authorization type: Type of authorization code installed and date of installation. The type can be: SLAC, UNIVERSAL, SPECIFIED, PAK, RTU. • Start Date: Displays validity start date if the license is for a specific term or time period. • Start Date: Displays validity end date if the license is for a specific term or time period. • Term Count: License count. • Subscription ID: Displays ID if the license is for a specific term or time period. • License type: License duration. This can be: SUBSCRIPTION or PERPETUAL. • Standby: The standby product instance UDI, followed by the status of the authorization code installation for this UDI. • Member: The member product instance UDI, followed by the status of the authorization code installation for this UDI. <p>For more information about the duration or term of a license's validity, see <link tbd>.</p>
Purchased Licenses	Header for license purchase information.	
	Active:	The active product instance and its the UDI.
	Count:	License count.
	Description:	License description.
	License type:	License duration. This can be: SUBSCRIPTION or PERPETUAL.
	Standby:	The standby product instance UDI.
	Member:	The member product instance UDI.

show license authorization Displaying Migrated Authorization Code

The following is sample output of the **show license authorization** command on a Cisco Catalyst 9800-CL Wireless Controller. The `Last Confirmation code:` shows that SLR authorization code is available after migration. Similar output is displayed on all supported Cisco Catalyst Wireless Controllers.

```

Device# show license authorization

show license data conversion

To display license data conversion information, enter the **show license data** command in privileged EXEC mode.

show license data conversion

Syntax Description

This command has no keywords or arguments

Command Modes

Privileged EXEC (Device#)

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
Cisco IOS XE Amsterdam 17.3.2a	This command continues to be available with the introduction of Smart Licensing Using Policy.

Usage Guidelines

Although visible on the CLI, this command is not applicable to Cisco Catalyst Wireless Controllers.

show license eventlog

To display event logs relating to Smart Licensing Using Policy, enter the **show license eventlog** command in privileged EXEC mode.

show license eventlog [*days*]

Syntax Description	<i>days</i> Enter the number of days for which you want to display event logs. The valid value range is from 0 to 2147483647.						
Command Modes	Privileged EXEC						
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Gibraltar 16.10.1</td> <td>This command was introduced.</td> </tr> <tr> <td>Cisco IOS XE Amsterdam 17.3.2a</td> <td>Additional events were added with the introduction of Smart Licensing Using Policy: <ul style="list-style-type: none"> • Installation and removal of a policy • Request, installation and removal of an authorization code. • Installation and removal of a trust code. • Addition of authorization source information for license usage. </td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.	Cisco IOS XE Amsterdam 17.3.2a	Additional events were added with the introduction of Smart Licensing Using Policy: <ul style="list-style-type: none"> • Installation and removal of a policy • Request, installation and removal of an authorization code. • Installation and removal of a trust code. • Addition of authorization source information for license usage.
Release	Modification						
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.						
Cisco IOS XE Amsterdam 17.3.2a	Additional events were added with the introduction of Smart Licensing Using Policy: <ul style="list-style-type: none"> • Installation and removal of a policy • Request, installation and removal of an authorization code. • Installation and removal of a trust code. • Addition of authorization source information for license usage. 						
Usage Guidelines	<p>Smart Licensing Using Policy: If the software version on the device (also referred to as a product instance) is Cisco IOS XE Amsterdam 17.3.2a or a later release, command output displays fields pertinent to Smart Licensing Using Policy.</p> <p>Smart Licensing: If the software version on the device is Cisco IOS XE Amsterdam 17.3.1 or an earlier release, command output displays fields pertinent to Smart Licensing.</p>						

show license history message

To display communication history between the product instance and CSSM or CSLU (as the case may be), enter the **show license history message** command in privileged EXEC mode. The output of this command is used by the technical support team, for troubleshooting.

show license history message

Syntax Description

This command has no keywords or arguments.

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Amsterdam 17.3.2a	This command was introduced.

Usage Guidelines

When you encounter an error message that you are not able to resolve, along with a copy of the message that appears on the console or in the system log, provide your Cisco technical support representative with sample output of these commands: **show license tech support**, **show license history message**, and the **show platform software sl-infra** privileged EXEC commands.

show license reservation

To display license reservation information, enter the **show license reservation** command in privileged EXEC mode.

show license reservation

Syntax Description	This command has no keywords or arguments
---------------------------	---

Command Modes	Privileged EXEC
----------------------	-----------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
	Cisco IOS XE Amsterdam 17.3.2a	This command continues to be available with the introduction of Smart Licensing Using Policy.

Usage Guidelines	The command continues to be available on the CLI and corresponding output is displayed, but with the introduction of Smart Licensing Using Policy, the notion of reservation is not longer applicable. Use the show license all command in privileged EXEC mode, to display <i>migrated</i> SLR licenses instead (the SLR authorization code is migrated to Smart Licensing Using Policy).
-------------------------	---

show license rum

To display information about Resource Utilization Measurement reports (RUM report) available on the product instance, including report IDs, the current processing state of a report, error information (if any), and to save the detailed or summarized view that is displayed, enter the **show license rum** command in privileged EXEC mode.

```
show license rum { feature { license_name | all } | id { rum_id | all } } [ detail ] [ save path ]
```

Syntax Description		
feature { <i>license_name</i> all }		Displays RUM report information based on the license name. Specify a particular license name to display all RUM reports for that license, or use the all keyword to display all RUM reports available on the product instance.
id { <i>rum_id</i> all }		Displays RUM report information based on the RUM report ID. Specify a report ID to display information for a single report, or use the all keyword to display all RUM reports available on the product instance.
detail		Displays detailed RUM report information. You can use this to display detailed information by license name and detailed information by RUM report ID.
save path		Saves the information that is displayed. This can be the simplified or detailed version and depends on the preceding keywords you have entered. Information about 200 RUM reports can be displayed. If there are more 200 RUM reports on the product instance, you can view information about all the RUM reports by saving it to a text (.txt) file. Note This option saves the information <i>about</i> RUM reports and is not for reporting purposes. It does not save the RUM report, which is an XML file containing usage information.

Command Modes Privileged EXEC (Device#)

Command History	Release	Modification
	Cisco IOS XE Cupertino 17.7.1	This command was introduced.

Usage Guidelines A RUM report is a license usage report, which the product instance generates, to fulfil reporting requirements as specified by the policy. An acknowledgement (ACK) is a response from CSSM and provides information about the status of a RUM report. Once the ACK for a report is available on the product instance, it indicates

that the corresponding RUM report is no longer required and can be deleted. You can use the **show license rum** command to:

- Display information about the available RUM reports on the product instance - filtered by ID or license name.
- Display a short summary of the information or display a detailed view of the information.
- Track a RUM report throughout its lifecycle (from the time it is first generated until its acknowledgement from CSSM). By displaying the current processing state and condition of a report you can ascertain if and when there is a problem in the reporting workflow.
- Save the displayed information. The CLI displays information about up to 200 reports. If there are more than 200 reports on the product instance and you want to view information about all of them, save the displayed info in a .txt file and export to the desired location to view.

To display a statistical view of RUM report information (the total number of reports on the product instance, the number of reports that have a corresponding ACK, the number of reports waiting for an ACK etc.) refer to the `Usage Report Summary`: section of the **show license all** and **show license tech** privileged EXEC commands.

The **show license tech** command also provides RUM report related information that the Cisco technical support team can use to troubleshoot, if there are problems with RUM reporting.

Examples

For information about fields shown in the display, see [#unique_613 unique_613_Connect_42_table_ytd_q4m_hrb](#) and [#unique_613 unique_613_Connect_42_table_gtn_q4m_hrb](#)

For sample output of the **show license rum** command, see:

- [#unique_613 unique_613_Connect_42_example_ugm_lsd_4rb](#)
- [#unique_613 unique_613_Connect_42_example_stg_msd_4rb](#)

Table 6: show license rum (simplified view) Field Descriptions

Field Name	Description
Report Id	A numeric field that identifies a RUM report. The product instance automatically assigns an ID to every RUM report it generates. An ID may be up to 20 characters long.

Field Name	Description
State	<p>This field displays the current processing state of a RUM report, and can be only one of the following:</p> <ul style="list-style-type: none"> • OPEN: This means new measurements are been added into this report. • CLOSED: This means no new measurements can be added to this report, and the report is ready for communication to CSSM. • PENDING: This is a transitional status that you may see if you display a report while it is being transmitted. • UNACK: This means the report was transmitted and is waiting for confirmation from CSSM, that it is processed. • ACK: This means the report was processed or acknowledged by CSSM and is eligible for deletion.
Flag	<p>Indicates the condition of the RUM report, and is displayed in the form of a character. Each character represents a specific condition, and can be only one of the following values:</p> <ul style="list-style-type: none"> • N: Normal; This means no errors have been detected and the report is going through normal operation. • P: Purged; This means the report was removed due to system resource limitation, and can refer to a shortage of disk space or insufficient memory. If this flag is displayed, refer to the <code>State Change Reason</code> field in the detailed view for more information. • E: Error; This means an error was detected in the RUM report. If this flag is displayed, refer to the detailed view for more information. Possible workflow issues include and are not limited to the following: <ul style="list-style-type: none"> • RUM report was dropped by CSSM. If this is the issue, the <code>State</code> field displays value <code>ACK</code>, but the <code>State Change Reason</code> does not change to <code>ACKED</code>. • RUM Report data is missing. If this is the issue, the <code>Storage State</code> field displays value <code>MISSING</code>. • Tracking information is missing. If this is the case the <code>State</code> field displays value <code>UNACK</code> and the <code>Transaction ID</code> field has no information. <p>Note Occasional errors in RUM reports do not require any action from you and are not an indication of a problem. It is only if you see a large number of reports (greater than 10) with errors that you must contact the Cisco technical support team.</p>
Feature Name	The name of the license that the RUM report applies to.

Table 7: show license rum (detailed view) Field Descriptions

Field Name	Description
Report Id	A numeric field that identifies a RUM report. The product instance automatically assigns an ID to every RUM report it generates. An ID may be up to 20 characters long.
Metric Name:	Shows the type of data that is recorded. For a RUM report, the only possible value is ENTITLEMENT, and refers to measurement of license usage.
Feature Name:	The name of the license that the RUM report applies to.
Metric Value	A unique identifier for the data that is recorded. This is the same as the “Entitlement Tag” in the output of the show license tech command and it displays information about the license being tracked.
UDI	Composed of the Product ID (PID) and serial number of the product instance.
Previous Report Id:	ID of the previous RUM report that the product instance generated for a license.
Next Report Id:	The ID that the product instance will use for the next RUM report it generates for a license.
State:	Displays the current processing state of a RUM report. The value displayed here is always the same as the value displayed in the simplified view. For the list of possible values see #unique_613 unique_613_Connect_42_table_ytd_q4m_hrb above.
State Change Reason:	Displays the reason for a RUM report state change. Not all state changes provide a reason. <ul style="list-style-type: none"> • NONE: This means the RUM report is going through its normal lifecycle (for instance, from OPEN → CLOSED → ACK). This state change reason is usually accompanied by an N flag (meaning Normal) in the simplified view and requires no action from you. • ACKED: RUM report was processed normally by CSSM. • REMOVED: RUM report was received and requested to be removed by CSSM. • RELOAD: RUM report state was changed due to some type of device reload.
Start Time:	Timestamps for measurement start and measurement end for a RUM report.
End Time:	Together, the start time and end time provide the time duration that the measurements cover.

Field Name	Description
Storage State:	<p>Displays current storage state of the RUM report and can be one of the following values:</p> <ul style="list-style-type: none"> • EXIST: This means the data for the RUM report is located in storage. • DELETED: This means the data was intentionally deleted. Refer to the <code>Storage State Change Reason</code> in the output of the show license tech command for more information about this storage state. • PURGED: This means the data was deleted due to a system resource limitation. Refer to the <code>Storage State Change Reason</code> in the output of the show license tech command for more information about this storage state. • MISSING: This means data is missing from storage. If reports are identified as missing, there is no recovery process.
Transaction ID:	<p>Contains tracking information for the RUM report. This information can be either polling information or ACK import information.</p> <p>The Transaction Message contains the error message, if the product instance receives one when importing an ACK.</p> <p>The information in these fields is used by the Cisco technical support team when troubleshooting problems with RUM reports.</p>
Transaction Message:	

Example: show license rum feature: Simplified and Detailed View

The following is sample output of the **show license rum feature***license-name* and **show license rum feature***license-name***detail** commands on a Cisco Catalyst 9500 Series Switch. Similar output is displayed on all other Catalyst switches.

The output is filtered to display all RUM reports for the DNA Advantage license, followed by a detailed view of all RUM reports for the DNA Advantage license.

Example: Saving a RUM Report View

The following example shows you how to save the information that is displayed.

By using the **feature** and **all** keywords, the output is filtered to display all RUM reports for all licenses being used on the product instance. It is then transferred to a TFTP location, from where it can be opened, to view the information.

```
Device# show license rum feature all save bootflash:all-rum-stats.txt
Device# copy tftp://10.8.0.6/bootflash:all-rum-stats.txt
```

show license status

To display information about licensing settings such as data privacy, policy, transport, usage reporting and trust codes, enter the **show license status** command in privileged EXEC mode.

show license status

Syntax Description	This command has no keywords or arguments	
Command Modes	Privileged EXEC (Device#)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
	Cisco IOS XE Amsterdam 17.3.2a	Command output was updated to reflect new fields that are applicable to Smart Licensing Using Policy. This includes <code>Trust code installed:</code> , <code>Policy in use</code> , <code>Policy name:</code> , reporting requirements as in the policy (<code>Attributes:</code>), and fields related to usage reporting. Command output no longer displays Smart Account and Virtual account information.
	Cisco IOS XE Cupertino 17.7.1	Command output was updated to display Smart Account and Virtual account information.

Usage Guidelines

Smart Licensing: If the software version on the device is Cisco IOS XE Amsterdam 17.3.1 or an earlier release, command output displays fields pertinent to Smart Licensing.

Smart Licensing Using Policy: If the software version on the device (also referred to as a product instance) is Cisco IOS XE Amsterdam 17.3.2a or a later release, command output displays fields pertinent to Smart Licensing Using Policy.

Account Information in the output

Starting with Cisco IOS XE Cupertino 17.7.1, every ACK includes the Smart Account and Virtual Account that was reported to, in CSSM. When it receives the ACK, the product instance securely stores only the latest version of this information - as determined by the timestamp in the ACK. The Smart Account and Virtual Account information that is displayed in the `Account Information` section of this command's output is therefore always as per the latest available ACK on the product instance.

If a product instance is moved from one Smart Account and Virtual Account to another, the next ACK after the move will have this updated information. The output of this command is updated once this ACK is available on the product instance.

The ACK may be received directly (where the product instance is connected to CSSM), or indirectly (where the product instance is connect to CSSM through CSLU, Cisco DNA Center, or SSM On-Prem), or by manually importing the ACK (where a product instance is in an air-gapped network).

Examples

For information about the fields shown in the display, see [Table 8: show license status Field Descriptions for Smart Licensing Using Policy, on page 146](#).

For sample output, see:

- [show license status with Account Information \(Smart Licensing Using Policy\), on page 151](#)
- [show license status with Cisco Default Policy \(Smart Licensing Using Policy\), on page 152](#)
- [show license status with Custom Policy \(Smart Licensing Using Policy\), on page 153](#)

Table 8: show license status Field Descriptions for Smart Licensing Using Policy

Field	Description	
Utility	Header for utility settings that are configured on the product instance.	
	Status:	Status
	Utility report:	Last attempt:
	Customer Information:	The following fields are displayed: <ul style="list-style-type: none"> • Id: • Name: • Street • City: • State: • Country: • Postal Code:
Smart Licensing Using Policy:	Header for policy settings on the product instance.	
	Status:	Indicates if Smart Licensing Using Policy is enabled. Smart Licensing Using Policy is supported starting from Cisco IOS XE Amsterdam 17.3.2 and is always enabled on supported software images.

Field	Description	
Data Privacy:	Header for privacy settings that are configured on the product instance.	
	Sending Hostname:	A <i>yes</i> or <i>no</i> value which shows if the hostname is sent in usage reports.
	Callhome hostname privacy:	Indicates if the Call Home feature is configured as the mode of transport for reporting. If configured, one of these values is displayed: <ul style="list-style-type: none"> • ENABLED • DISABLED
	Smart Licensing hostname privacy:	One of these values is displayed: <ul style="list-style-type: none"> • ENABLED • DISABLED
	Version privacy:	One of these values is displayed: <ul style="list-style-type: none"> • ENABLED • DISABLED
Transport:	Header for transport settings that are configured on the product instance.	
	Type:	Mode of transport that is in use. Additional fields are displayed for certain transport modes. For example, if transport type is set to CSLU, the CSLU address is also displayed.

Field	Description
Policy:	Header for policy information that is applicable to the product instance.
Policy in use:	Policy that is applied This can be one of the following: Cisco default, Product default, Permanent License Reservation, Specific License Reservation, PAK license, Installed on <date>, Controller.
Policy name:	Name of the policy
Reporting ACK required:	A <i>yes</i> or <i>no</i> value which specifies if the report for this product instance requires CSSM acknowledgement (ACK) or not. The default policy is always set to “yes”.
Unenforced/Non-Export Perpetual Attributes	Displays policy values for perpetual licenses. <ul style="list-style-type: none"> • First report requirement (days): The maximum amount of time available before the first report must be sent, followed by policy name. • Reporting frequency (days): The maximum amount of time available before the subsequent report must be sent, followed by policy name. • Report on change (days): he maximum amount of time available to send a report in case of a change in license usage, followed by policy name
Unenforced/Non-Export Subscription Attributes	Displays policy values for subscription licenses. <ul style="list-style-type: none"> • First report requirement (days): The maximum amount of time available before the first report must be sent, followed by policy name. • Reporting frequency (days): The maximum amount of time available before the subsequent report must be sent, followed by policy name. • Report on change (days): he maximum amount of time available to send a report in case of a change in license usage, followed by policy name
Enforced (Perpetual/Subscription) License Attributes	

Field		Description
		<p>Displays policy values for enforced licenses.</p> <ul style="list-style-type: none"> • First report requirement (days): The maximum amount of time available before the first report must be sent, followed by policy name. • Reporting frequency (days): The maximum amount of time available before the subsequent report must be sent, followed by policy name. • Report on change (days): The maximum amount of time available to send a report in case of a change in license usage, followed by policy name
	Export (Perpetual/Subscription) License Attributes	<p>Displays policy values for export-controlled licenses.</p> <ul style="list-style-type: none"> • First report requirement (days): The maximum amount of time available before the first report must be sent, followed by policy name. • Reporting frequency (days): The maximum amount of time available before the subsequent report must be sent, followed by policy name. • Report on change (days): The maximum amount of time available to send a report in case of a change in license usage, followed by policy name
Miscellaneous	Header for custom ID.	
	Custom Id:	ID

Field	Description
Usage Reporting:	Header for usage reporting (RUM reports) information.
Last ACK received:	Date and time of last ACK received, in the local time zone.
Next ACK deadline:	Date and time for next ACK. If the policy states that an ACK is not required then this field displays <code>none</code> . Note If an ACK is required and is not received by this deadline, a syslog is displayed.
Reporting Interval:	Reporting interval in days The value displayed here depends on what you configure in the license smart usage interval <code>interval_in_days</code> and the policy value. For more information, see the corresponding Syntax Description: license smart (global config) .
Next ACK push check:	Date and time when the product instance will submit the next polling request for an ACK. Date and time are in the local time zone. This applies only to product instance- initiated communication to CSSM or CSLU. If the reporting interval is zero, or if no ACK polling is pending, then this field displays <code>none</code> .
Next report push:	Date and time when the product instance will send the next RUM report. Date and time are in the local time zone. If the reporting interval is zero, or if there are no pending RUM reports, then this field displays <code>none</code> .
Last report push:	Date and time for when the product instance sent the last RUM report. Date and time are in the local time zone.
Last report file write:	Date and time for when the product instance last saved an offline RUM report. Date and time are in the local time zone.
Last report pull:	Date and time for when usage reporting information was retrieved using data models. Date and time are in the local time zone.

Field	Description
Trust Code Installed:	Header for trust code-related information. Displays date and time if trust code is installed. Date and time are in the local time zone. If a trust code is not installed, then this field displays <i>none</i> .
Active:	Active product instance. In a High Availability set-up, the the UDIs of all product instances in the set-up, along with corresponding trust code installation dates and times are displayed.
Standby:	Standby product instance.
Member:	Member product instance

show license status with Account Information (Smart Licensing Using Policy)

The following is sample output of the **show license status** command, on a product instance where the software version is Cisco IOS XE Cupertino 17.7.1:

```

Device# show license status
Utility:
  Status: DISABLED

Smart Licensing Using Policy:
  Status: ENABLED

           INSTALLED on Nov 02 05:09:31 2020 IST
```

show license summary

To display a brief summary of license usage, which includes information about licenses being used, the count, and status, enter the **show license summary** command in privileged EXEC mode.

show license summary

Syntax Description	This command has no keywords or arguments	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
	Cisco IOS XE Amsterdam 17.3.2a	Command output was updated to reflect valid license status for Smart Licensing Using Policy. Valid license statuses include: <code>IN USE</code> , <code>NOT IN USE</code> , <code>NOT AUTHORIZED</code> . Command output was also updated to remove registration and authorization information. Command output no longer displays Smart Account and Virtual account information.
	Cisco IOS XE Cupertino 17.7.1	Command output was updated to display Smart Account and Virtual account information.

Usage Guidelines

Smart Licensing: If the software version on the device is Cisco IOS XE Amsterdam 17.3.1 or an earlier release, command output displays fields pertinent to Smart Licensing.

Smart Licensing Using Policy: If the software version on the device (also referred to as a product instance) is Cisco IOS XE Amsterdam 17.3.2a or a later release, command output displays fields pertinent to Smart Licensing Using Policy.

The licenses on Cisco Catalyst Wireless Controllers are never `NOT AUTHORIZED`, because none of the available licenses are export-controlled or enforced (Only these licenses require authorization before use).

Account Information in the output

Starting with Cisco IOS XE Cupertino 17.7.1, every ACK includes the Smart Account and Virtual Account that was reported to, in CSSM. When it receives the ACK, the product instance securely stores only the latest version of this information - as determined by the timestamp in the ACK. The Smart Account and Virtual Account information that is displayed in the `Account Information` section of this command's output is therefore always as per the latest available ACK on the product instance.

If a product instance is moved from one Smart Account and Virtual Account to another, the next ACK after the move will have this updated information. The output of this command is updated once this ACK is available on the product instance.

The ACK may be received directly (where the product instance is connected to CSSM), or indirectly (where the product instance is connect to CSSM through CSLU, Cisco DNA Center, or SSM On-Prem), or by manually importing the ACK (where a product instance is in an air-gapped network).

Examples

See [Table 9: show license summary Field Descriptions, on page 156](#) for information about fields shown in the display.

[show license summary: IN USE \(Smart Licensing Using Policy\), on page 156](#)

[show license summary: NOT IN USE \(Smart Licensing Using Policy\), on page 156](#)

Table 9: show license summary Field Descriptions

Field	Description
Account Information: Smart Account: Virtual Account:	The Smart Account and Virtual Account that the product instance is part of. This information is always as per the latest available ACK on the product instance. This field is displayed only if the software version on the product instance is Cisco IOS XE Cupertino 17.7.1 or a later release.
License	Name of the licenses in use
Entitlement Tag	Short name for license
Count	License count
Status	License status can be one of the following <ul style="list-style-type: none"> • In-Use: Valid license, and in-use. • Not In-Use • Not Authorized: Means that the license requires installation of SLAC before use.

show license summary: IN USE (Smart Licensing Using Policy)

The following is sample output of the **show license summary** command, on a product instance where the software version is Cisco IOS XE Cupertino 17.7.1:

```
Device# show license summary
```

```
Account Information:
  Smart Account: Eg-SA
  Virtual Account: Eg-VA
```

```
License Usage:
License                Entitlement Tag                Count Status
-----
air-network-essentials (DNA_NWSTACK_E)                1 IN USE
air-dna-essentials     (AIR-DNA-E)                    1 IN USE
```

show license summary: NOT IN USE (Smart Licensing Using Policy)

The following is sample output of the **show license summary** command, where no APs have joined the controller. Current consumption (Count) is therefore zero, and the `Status` field shows that the licenses are NOT IN USE:

```
Device# show license summary
```

```
Device#show license summary  
License Reservation is ENABLED
```

```
License Usage:
```

License	Entitlement Tag	Count	Status
Aironet DNA Advantag...	(AIR-DNA-A)	0	NOT IN USE
AP Perpetual Network...	(DNA_NWStack)	0	NOT IN USE

show license tech

To display licensing information to help the technical support team to solve a problem, enter the **show license tech** command in privileged EXEC mode. The output for this command includes outputs of several other **show license** commands and more.

```
show license tech { data { conversion } | eventlog [{ days }] | reservation | support }
```

```
show license tech { message | rum { feature { license_name | all } | id { rum_id | all } } [ detail ] [ save path ] | support }
```

Syntax Description

data { conversion }	Displays license data conversion information.
eventlog [{ days }]	Displays event logs related to Smart Licensing Using Policy. For <i>days</i> , enter the number of days for which you want to display event logs. The valid value range is from 0 to 2147483647.
reservation	Displays license reservation information.
support	Displays licensing information that helps the technical support team to debug a problem.

Syntax Description

message	Displays messages concerning trust establishment, usage reporting, result polling, authorization code requests and returns, and trust synchronization. This is the same information as displayed in the output of the show license history message command.
rum { feature { license_name all } id { rum_id all } } [detail] [save path]	Displays information about Resource Utilization Measurement reports (RUM reports) on the product instance, including report IDs, the current processing state of a report, error information (if any), and an option save the displayed RUM report information. Note This option saves the information <i>about</i> RUM reports and is not for reporting purposes. It does not save the RUM report, which is an XML file containing usage information.
support	Displays licensing information that helps the technical support team to debug a problem.

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
Cisco IOS XE Amsterdam 17.3.2a	Command output was updated to reflect new fields that are applicable to Smart Licensing Using Policy.

Release	Modification
Cisco IOS XE Cupertino 17.7.1	<p>The rum keyword and additional options under this keyword were added:</p> <pre>{ feature { license_name all } id { rum_id all } }</pre> <p>The output of the show license tech support command was enhanced to display the following information:</p> <ul style="list-style-type: none"> • RUM report information, in section <code>License Usage and Usage Report Summary</code>. • Smart Account and Virtual account information, in section <code>Account Information</code>. <p>The data conversion, eventlog and reservation keywords were removed from this command. They continue to be available as separate show commands, that is, show license data, show license eventlog, and show license reservation respectively.</p>

Usage Guidelines

Smart Licensing: If the software version on the device is Cisco IOS XE Amsterdam 17.3.1 or an earlier release, command output displays fields pertinent to Smart Licensing (whether smart licensing is enabled, all associated licensing certificates, compliance status, and so on).

Smart Licensing Using Policy: If the software version on the device (also referred to as a product instance) is Cisco IOS XE Amsterdam 17.3.2 or a later release, command output displays fields pertinent to Smart Licensing Using Policy. Note the following guidelines:

When you encounter an error message that you are not able to resolve, along with a copy of the message that appears on the console or in the system log, provide your Cisco technical support representative with sample output of these commands: **show license tech support**, **show license history message**, and the **show platform software sl-infra all** privileged EXEC commands.

- Troubleshooting with a Support Representative

When you encounter an error message that you are not able to resolve, along with a copy of the message that appears on the console or in the system log, provide your Cisco technical support representative with sample output of these commands: **show license tech support**, **show license history message**, and the **show platform software sl-infra all** privileged EXEC commands.

- RUM Report Information in the output

- The output of the **show license tech support** command displays the following sections pertaining to RUM reports:

[Table 10: show license tech support: Field Descriptions for Header "License Usage", on page 160](#)

```
<output truncated>
License Usage
=====
Measurements:
  ENTITLEMENT:
    Interval: 00:15:00
    Current Value: 800
    Current Report: 1638055645      Previous: 0
<output truncated>
```

Table 11: show license tech support: Field Descriptions for Header "Usage Report Summary", on page 161

```
<output truncated>
Usage Report Summary:
=====
Total: 4, Purged: 0(0)
Total Acknowledged Received: 0, Waiting for Ack: 0(4)
Available to Report: 4 Collecting Data: 2
Maximum Display: 4 In Storage: 4, MIA: 0(0)
Report Module Status: Ready

<output truncated>
```

- The output of the **show license tech rum** command when used with the **detail** keyword, displays the following fields pertaining to RUM reports: [Table 12: show license tech rum: Field Descriptions for Header "Smart Licensing Usage Report Detail", on page 161.](#)

The options available under the **show license tech rum** keyword are the same as the options available with the **show license rum** privileged EXEC command. The sample output that is displayed in the *simplified view* is also the same. But if you use the **detail** keyword (for example if you enter **show license tech rum feature license_name detail**), the detailed view is displayed and this has a few *additional* fields when compared to **show license rum**.

Table 10: show license tech support: Field Descriptions for Header "License Usage"

Field Name	Description
Interval:	This is a fixed measurement duration and is always 15 minutes.
Current Value:	Information about the current license count.
Current Report:	ID of the currently OPEN report for the license.
Previous:	ID of the last OPEN report for the license. This report will have state CLOSED now.

Table 11: show license tech support: Field Descriptions for Header "Usage Report Summary"

Field Name	Description
Total:	Total number of reports that the product instance has ever generated. Note This total does not refer to the total number of reports <i>currently available</i> on and being tracked by the product instance. For this you must sum up the <code>Total Acknowledged Received:</code> and <code>Available to Report</code> fields.
Purged:	The number of reports deleted due to a system resource limitation. This number includes RUM reports where the product instance no longer has tracking information.
Total Acknowledged Received:	The number of RUM reports acknowledged on this product instance.
Waiting for Ack:	The number of RUM reports waiting for an ACK. This is the total number of reports in an <code>UNACK</code> state, where the product instance still has tracking information.
Available to Report:	The number of RUM reports that are available to send to CSSM. This is the total number of reports in an <code>OPEN</code> or <code>CLOSED</code> state, where the product instance still has tracking information.
Collecting Data:	Number of reports where the product instance is currently collecting measurements.
Maximum Display:	Number of reports available for display in a show command's output.
In Storage:	Number of reports currently stored on the disk
MIA:	The number of reports missing.

Table 12: show license tech rum: Field Descriptions for Header "Smart Licensing Usage Report Detail"

Field Name	Description
Version:	Displays the format of the report during transmission. Starting with Cisco IOS XE Cupertino 17.7.1, RUM reports are stored in a new format that reduces processing time. This field indicates if the product instance is using the old format or the new format.

Field Name	Description
Storage State:	Indicates if a given report is currently in storage. In addition to the displaying the current storage state of the RUM report, with these possible values: EXIST, DELETED, PURGED, MISSING, if a "(1)" is displayed next to the label (<code>Storage State (1)</code>), this means the RUM report is in the older (pre-17.7.1 format) and will be processed accordingly. If the RUM report is in the new format, the field is displayed as <code>Storage State</code> - without any extra information.
Storage State Change Reason:	Displays the reason for the change in the storage state change. Not all state changes provide a reason. <ul style="list-style-type: none"> • NONE: This means no reason was recorded for the the storage state change. • PROCESSED: This means the RUM report was deleted after CISCO has processed the data. • LIMIT_STORAGE: This means the RUM report was deleted because the product instance reached it's storage limit. • LIMIT_TIME: This means the RUM report was deleted because the report reached the persisted time limit.
Transaction ID: Transaction Message:	If the transaction ID displays a correlation ID and an error status is displayed, the product instance displays the error code field in this section. If there are no errors, no data is displayed here.
Report Size	This field displays two numbers. The first number is the size of raw report for communication, in bytes. The second number is the disk space used for saving the report, also in bytes. The second number is displayed only if report is stored in the new format.

show license tech support on Cisco Catalyst 9800-CL Wireless Controller

The following is sample output from the **show license tech support** command on a Cisco Catalyst 9800-CL Wireless Controller running software version Cisco IOS XE Cupertino 17.7.1:

```
Device# show license tech support

show license udi

To display Unique Device Identifier (UDI) information for a product instance, enter the **show license udi** command in privileged EXEC mode. In a High Availability set-up, the output displays UDI information for all connected product instances.

show license udi

Syntax Description

This command has no keywords or arguments

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
Cisco IOS XE Amsterdam 17.3.2a	This command continues to be available with the introduction of Smart Licensing Using Policy.

Usage Guidelines

Smart Licensing Using Policy: If the software version on the device (also referred to as a product instance) is Cisco IOS XE Amsterdam 17.3.2a or a later release, command output displays fields pertinent to Smart Licensing Using Policy.

Smart Licensing: If the software version on the device is Cisco IOS XE Amsterdam 17.3.1 or an earlier release, command output displays fields pertinent to Smart Licensing.

Examples

[show license udi with Standalone Product Instance, on page 173](#)

[show license udi with Active and Standby, on page 173](#)

show license udi with Standalone Product Instance

The following is sample output from the **show license udi** command on a standalone product instance.

```
Device# show license udi
UDI: PID:C9800-L-F-K9,SN:FCW2323W016
```

show license udi with Active and Standby

The following is sample output from the **show license udi** command in a High Availability set-up where an active and a standby product instances exist. UDI information is displayed for both.

```
Device# show license udi
UDI: PID:C9800-CL-K9,SN:93BBAH93MGS
HA UDI List:
  Active:PID:C9800-CL-K9,SN:93BBAH93MGS
  Standby:PID:C9800-CL-K9,SN:9XECPSUU4XN
```

show license usage

To display license usage information such as status, a count of licenses being used, and enforcement type, enter the **show license usage** command in privileged EXEC mode.

show license usage

Syntax Description	This command has no keywords or arguments
---------------------------	---

Command Modes	Privileged EXEC
----------------------	-----------------

Command History	Release	Modification
	This command was introduced in a release earlier than Cisco IOS XE Amsterdam 17.3.2	This command was introduced.
	Cisco IOS XE Amsterdam 17.3.2a	Command output was updated to reflect new fields that are applicable to Smart Licensing Using Policy. This includes the <code>Status</code> , <code>Enforcement type</code> fields. Command output was also updated to remove reservation related information, authorization status information, and export status information.

Usage Guidelines	Smart Licensing Using Policy: If the software version on the device (also referred to as a product instance) is Cisco IOS XE Amsterdam 17.3.2a or a later release, command output displays fields pertinent to Smart Licensing Using Policy.
-------------------------	---

Smart Licensing: If the software version on the device is Cisco IOS XE Amsterdam 17.3.1 or an earlier release, command output displays fields pertinent to Smart Licensing.

Examples

See [Table 13: show license usage Field Descriptions, on page 174](#) for information about fields shown in the display.

[show license usage with unenforced licenses \(Smart Licensing Using Policy\), on page 175](#)

[show license usage with unenforced SLR licenses \(Smart Licensing Using Policy\), on page 176](#)

Table 13: show license usage Field Descriptions

Field	Description
License Authorization: Status:	Displays overall authorization status.
():	Name of the license as in CSSM. If this license is one that requires an authorization code, the name of the license and the code.

Field	Description
Description	Description of the license as in CSSM.
Count	License count. If the license is not in-use, the count is reflected as zero.
Version	Version.
Status	License status can be one of the following <ul style="list-style-type: none"> • In-Use: Valid license, and in-use. • Not In-Use • Not Authorized: Means that the license requires installation of S... more information, see
Export Status:	Indicates if this license is export-controlled or not. Accordingly, one of the following is displayed: <ul style="list-style-type: none"> • RESTRICTED - ALLOWED • RESTRICTED - NOT ALLOWED • NOT RESTRICTED
Feature name	Name of the feature that uses this license.
Feature Description:	Description of the feature that uses this license.
Utility Subscription id:	ID Not applicable, because the corresponding configuration option is not
Enforcement type	Enforcement type status for the license. This may be one of the following: <ul style="list-style-type: none"> • ENFORCED • NOT ENFORCED • EXPORT RESTRICTED - ALLOWED • EXPORT RESTRICTED - NOT ALLOWED For more information about enforcement types, see <link tbd>

show license usage with unenforced licenses (Smart Licensing Using Policy)

The following is sample output of the **show license usage** command. Unenforced licenses are in-use here.

```
Device# show license usage

License Authorization:
  Status: Not Applicable

air-network-essentials (DNA_NWSTACK_E):
  Description: air-network-essentials
  Count: 1
  Version: 1.0
```

```

Status: IN USE
Export status: NOT RESTRICTED
Feature Name: air-network-essentials
Feature Description: air-network-essentials
Enforcement type: NOT ENFORCED

air-dna-essentials (AIR-DNA-E):
Description: air-dna-essentials
Count: 1
Version: 1.0
Status: IN USE
Export status: NOT RESTRICTED
Feature Name: air-dna-essentials
Feature Description: air-dna-essentials
Enforcement type: NOT ENFORCED
License type: Perpetual

```

show license usage with unenforced SLR licenses (Smart Licensing Using Policy)

The following is sample output of the **show license usage** command. Migrated SLR licenses are in-use here:

```

Device# show license usage

air-network-advantage (DNA_NWStack):
Description: air-network-advantage
Count: 1
Version: 1.0
Status: IN USE
Export status: NOT RESTRICTED
Feature Name: air-network-advantage
Feature Description: air-network-advantage
Enforcement type: NOT ENFORCED
License type: Perpetual
Reservation:
  Reservation status: SPECIFIC INSTALLED
  Total reserved count: 20

air-dna-advantage (AIR-DNA-A):
Description: air-dna-advantage
Count: 1
Version: 1.0
Status: IN USE
Export status: NOT RESTRICTED
Feature Name: air-dna-advantage
Feature Description: air-dna-advantage
Enforcement type: NOT ENFORCED
License type: Perpetual
Reservation:
  Reservation status: SPECIFIC INSTALLED
  Total reserved count: 20

```

show platform software sl-infra

To display troubleshooting information and for debugging, enter the **show platform software sl-infra** command in privileged EXEC mode. The output of this command is used by the technical support team, for troubleshooting and debugging.

```
show platform software sl-infra { all | current | debug | stored }
```

Syntax Description

all	Displays current, debugging, and stored information.
current	Displays current license-related information.
debug	Enables debugging
stored	Displays information that is stored on the product instance.

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Amsterdam 17.3.2a	This command was introduced.

Usage Guidelines

When you encounter an error message that you are not able to resolve, along with a copy of the message that appears on the console or in the system log, provide your Cisco technical support representative with sample output of these commands: **show license tech support**, **show license history message**, and the **show platform software sl-infra all** privileged EXEC commands.

show platform software tls client summary

To view the TLS client summary details, use the **show platform software tls client summary** command.

show platform software tls client summary

Syntax Description

This command has no keywords or arguments.

Command Modes

Global configuration

Command History

Release	Modification
Cisco IOS XE Bengaluru 17.6.1	This command was introduced.

Examples

This example shows how to view the TLS client summary details:

```
Device # show platform software tls client summary
```

Name	ID	Gateway	Port	Auth	Trustpoint	DPD Time	Rekey Time	Retry Time
fqdn	0		8443	PSK	N/A	60	300	20

show platform software client detail

To display a summary of TLS client session detail, session statistics, tunnel statistics, and DNS counters, use the **show platform software client detail** command.

show platform software client detail

Syntax Description	This command has no keywords or arguments.
---------------------------	--

Command Modes	Global configuration
----------------------	----------------------

Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.6.1	This command was introduced.

Examples This example shows how to view the TLS client summary details:

```
Device # show platform software client detail

TLS Client      : Session Detail
Session Name    : fqdn
FQDN resolved IP : 10.194.234.149
ID              : 0
Created         : 04/20/21 00:36:42
Updated        : 04/22/21 05:56:03
State          : Up (Rekey)
Up Time        : 04/21/21 20:30:21 ( 9 hours 25 minutes 45 seconds )
Down Time      : 04/21/21 20:30:01
Rekey Time     : 04/22/21 05:55:51 ( 15 seconds )
```

TLS Session Statistics

```
Up Notifications      : 3
Down Notifications    : 2
Rekey Notifications   : 636

show platform software tls session summary

To view the tls client session summary, use the **show platform software tls session summary** command.

show platform software tls session summary

Syntax Description

This command has no keywords or arguments.

Command Modes

Global configuration

Command History

Release	Modification
Cisco IOS XE Bengaluru 17.6.1	This command was introduced.

Examples

This example shows how to view the TLS client summary details:

```
Device # show platform software tls session summary
```

```
TLS Client - Session Summary
```

Name	ID	Created	State	Since	Elapsed
fqdn	0	04/20/21 00:36:42	Up	04/21/21 20:30:21	9 hours 26 minutes 44 seconds

show logging profile wireless end timestamp

To specify log filtering end location timestamp for filtering, use the **show logging profile wireless end timestamp** command.

show logging profile wireless end timestamp *time-stamp*

Syntax Description	<i>time-stamp</i> Time to end the filtering. For example, 2017/02/10 14:41:50.849.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Usage Guidelines	Ensure that you enable internal keyword using the show logging profile wireless internal command to get the trace output.
-------------------------	--

Example

The following example shows how to specify log filtering end location timestamp for filtering:

```
Device# show logging profile wireless end timestamp 2017/02/10 14:41:50.849
```

show logging profile wireless filter

To specify filter for logs, use the **show logging profile wireless filter** command.

```
show logging profile wireless filter { ipv4 | mac | string | uuid }
```

Syntax Description

ipv4 Selects logs with specific IP address app context.

mac Selects logs with specific MAC app context.

string Selects logs with specific string app context.

uuid Selects logs with specific Universally Unique Identifier (UUID) app context.

Command Default

None

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Usage Guidelines

Ensure that you enable **internal** keyword using the **show logging profile wireless internal** command to get the trace output.

Without the **internal** keyword, only customer curated logs are displayed.

Example

The following example shows how to specify filter for logs:

```
Device# show logging profile wireless filter ipv4 10.10.11.1
```

show logging profile wireless fru

To specify field-replaceable unit (FRU) specific commands, use the **show logging profile wireless fru** command.

show logging profile wireless fru {0 {reverse | to-file}} chassis} {0 {reverse | to-file} | chassis}

Syntax Description

0	SPA-Inter-Processor slot 0.
reverse	Shows logs in reverse chronological order.
to-file	Decodes files stored in disk and write output to file.
chassis	Chassis name.

Command Default

None

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Usage Guidelines

Ensure that you enable **internal** keyword using the **show logging profile wireless internal** command to get the trace output.

Without the **internal** keyword, only customer curated logs are displayed.

Example

The following example shows how to specify FRU specific commands:

```
Device# show logging profile wireless fru 0
```

show logging profile wireless internal

To select all the logs, use the **show logging profile wireless internal** command.

show logging profile wireless internal

Syntax Description	This command has no keywords or arguments.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Usage Guidelines	Ensure that you enable internal keyword using the show logging profile wireless internal command to get the trace output.
-------------------------	---

Without the **internal** keyword, only customer curated logs are displayed.

Example

The following example shows how to display all the logs:

```
Device# show logging profile wireless internal
```

show logging profile wireless level

To select logs above a specific level, use the **show logging profile wireless level** command.

```
show logging profile wireless level { debug | emergency | error | info | noise | notice | verbose | warning
}
```

Syntax Description		
	debug	Selects debug messages.
	emergency	Selects emergency possible messages.
	error	Selects error messages.
	info	Selects informational messages.
	noise	Selects maximum possible messages.
	notice	Selects notice messages.
	verbose	Selects verbose debug messages.
	warning	Selects warning messages.

Command Default None

Command Modes Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Usage Guidelines Ensure that you enable **internal** keyword using the **show logging profile wireless internal** command to get the trace output.

Without the **internal** keyword, only customer curated logs are displayed.

Example

The following example shows how to select logs above a specific level:

```
Device# show logging profile wireless level info
```

show logging profile wireless module

To select logs for specific modules, use the **show logging profile wireless module** command.

```
show logging profile wireless module module-name
```

Syntax Description	<i>module-name</i> A comma or space separated list of module names. For example, dbal, tdllib or "dbal tdllib".				
Command Default	None				
Command Modes	Privileged EXEC (#)				
Command History	<table><thead><tr><th>Release</th><th>Modification</th></tr></thead><tbody><tr><td>Cisco IOS XE Gibraltar 16.10.1</td><td>This command was introduced.</td></tr></tbody></table>	Release	Modification	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
Release	Modification				
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.				
Usage Guidelines	<p>Ensure that you enable internal keyword using the show logging profile wireless internal command to get the trace output.</p> <p>Without the internal keyword, only customer curated logs are displayed.</p>				

Example

The following example shows how to select logs for specific modules:

```
Device# show logging profile wireless module dbal
```

show logging profile wireless reverse

To view logs in reverse chronological order, use the **show logging profile wireless reverse** command.

show logging profile wireless reverse

Syntax Description	This command has no keywords or arguments.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Usage Guidelines	Ensure that you enable internal keyword using the show logging profile wireless internal command to get the trace output.
-------------------------	---

Without the **internal** keyword, only customer curated logs are displayed.

Example

The following example shows how to view logs in reverse chronological order:

```
Device# show logging profile wireless reverse
```

show logging profile wireless start

To specify log filtering start location, use the **show logging profile wireless start** command.

```
show logging profile wireless start { marker marker | timestamp time-stamp }
```

Syntax Description	marker	The marker to start filtering from. It must match with previously set marker.
	timestamp	The timestamp for filtering. for example, "2017/02/10 14:41:50.849".

Command Default None

Command Modes Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Usage Guidelines Ensure that you enable **internal** keyword using the **show logging profile wireless internal** command to get the trace output.

Without the **internal** keyword, only customer curated logs are displayed.

Example

The following example shows how to specify log filtering start location:

```
Device# show logging profile wireless start timestamp 2017/02/10 14:41:50.849
```

show logging profile wireless switch

To specify the switch to look for logs, use the **show logging profile wireless switch** command.

show logging profile wireless switch { *switch-num* | **active** | **standby** }

Syntax Description	
active	Selects the active instance.
standby	Selects the standby instance.

Command Default None

Command Modes Privileged EXEC (#)

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Usage Guidelines Ensure that you enable **internal** keyword using the **show logging profile wireless internal** command to get the trace output.

Without the **internal** keyword, only customer curated logs are displayed.

Example

The following example shows how to specify the number to look for logs:

```
Device# show logging profile wireless switch active
```

show logging profile wireless to-file

To decode files stored in disk and write the output to a file, use the **show logging profile wireless to-file** command.

show logging profile wireless to-file *output-file-name*

Syntax Description	<i>output-file-name</i> Output file name. File with this name will be created in the flash memory.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Usage Guidelines	Ensure that you enable internal keyword using the show logging profile wireless internal command to get the trace output.
-------------------------	---

Without the **internal** keyword, only customer curated logs are displayed.

Example

The following example shows how to decode files stored in disk and write the output to a file:

```
Device# show logging profile wireless to-file testfile
```

show mdns-sd cache

To view mDNS cache details, use the **show mdns-sd cache** command.

```
show mdns-sd cache { ap-mac mac-address (H.H.H) | client-mac client-mac-address (H.H.H) |
detail | glan-id <1 - 5> | location-group <0 - 4096> | mdns-ap mdns-ap mac address (H.H.H)
| rlan-id <1 - 128> | statistics | type { A-AAAA | PTR | SRV | TXT } | udn
{ <1 - 4294967295> | shared } | wired | wlan-id <0 - 4096> }
```

Syntax Description		
ap-mac	<i>mac-address (H.H.H)</i>	Specifies the AP Ethernet MAC address.
client-mac	<i>client-mac-address (H.H.H)</i>	Specifies the client MAC address.
detail		Specifies the cache in detail.
location-group	<i><0 - 4096></i>	Specifies the location group. The value range is from 0 to 4096.
mdns-ap	<i>mdns-ap mac address (H.H.H)</i>	Specifies the cache learnt from a specific mDNS AP.
rlan-id	<i><1 - 128></i>	Specifies the remote LAN ID. The value range is from 1 - 128.
statistics		Specifies the mDNS cache statistics.
type		Specifies the mDNS record type. The record types are, A-AAAA, PTR, SRV, and TXT.
udn	<i><1 - 4294967295></i>	Specifies the UDN ID. The value range is from 1 to 4294967295.
shared		Specifies the UDN shared services.
wired		Specifies the mDNS services from wired clients.
wlan-id	<i><0 - 4096></i>	Specifies the WLAN ID. The value range is from 1 to 4096.

Command Default None

Command Modes Privileged EXEC mode

Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.3.1	This command was introduced.

Usage Guidelines None

Example

The following example shows how to view the mDNS cache details:

```
Device# show mdns-sd cache
```

show mdns-sd cache detail

To view the multicast DNS (mDNS) cache details, use the **show mdns-sd cache detail** command.

show mdns-sd cache detail

Syntax Description	This command has no keywords or arguments.				
Command Default	None				
Command Modes	Privileged EXEC (#)				
Command History	<table><thead><tr><th>Release</th><th>Modification</th></tr></thead><tbody><tr><td>Cisco IOS XE Amsterdam 17.1.1s</td><td>This command was introduced.</td></tr></tbody></table>	Release	Modification	Cisco IOS XE Amsterdam 17.1.1s	This command was introduced.
Release	Modification				
Cisco IOS XE Amsterdam 17.1.1s	This command was introduced.				

Example

The following is sample output from the **show mdns-sd cache detail** command:

```
Device# show mdns-sd cache detail

Name: _printer._tcp.local
Type: PTR
TTL: 4500
VLAN: 21
Client MAC: ace2.d3bc.047e
Remaining-Time: 4383
mDNS Service Policy: default-mdns-service-policy
Rdata: HP OfficeJet Pro 8720 [BC047E] (2)._printer._tcp.local
```

show mdns-sd cache upn shared

To view the multicast DNS (mDNS) cache user personal network shared services details, use the **show mdns-sd cache upn shared** command.

show mdns-sd cache upn shared

Syntax Description	This command has no keywords or arguments.	
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.1.1s	This command was introduced.

Example

The following is sample output from the **show mdns-sd cache upn shared** command that displays the mDNS cache UPN shared services details:

```
Device# show mdns-sd cache upn shared
```

```

show mdns-sd cache upn detail

To view the multicast DNS (mDNS) cache user personal network identifier details, use the **show mdns-sd cache upn detail** command.

show mdns-sd cache upn *upn-id* detail

Syntax Description	<i>upn-id</i> User personal network identifier.				
Command Default	None				
Command Modes	Privileged EXEC (#)				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Amsterdam 17.1.1s</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Amsterdam 17.1.1s	This command was introduced.
Release	Modification				
Cisco IOS XE Amsterdam 17.1.1s	This command was introduced.				

Example

The following is sample output from the **show mdns-sd cache upn detail** command that displays the mDNS cache UPN identifier details:

```
Device# show mdns-sd cache upn 777 detail
```

```
Name: _services._dns-sd._udp.local
Type: PTR
TTL: 4500
WLAN: 2
WLAN Name: mdns-psk
VLAN: 16
Client MAC: f4f9.51e2.a6a6
AP Ethernet MAC: 002a.1087.d68a
Remaining-Time: 4486
Site-Tag: default-site-tag
mDNS Service Policy: madhu-mDNS-Policy
Overriding mDNS Service Policy: NO
UPN-ID: 7777
UPN-Status: Enabled
Rdata: _airplay._tcp.local
```

show mdns-sd flexconnect summary

To view the summary of the mDNS flexconnect sites, use the **show mdns-sd flexconnect summary** command.

show mdns-sd flexconnect summary

Syntax Description	This command has no keywords or arguments.	
Command Default	None	
Command Modes	Privileged EXEC mode	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.3.1	This command was introduced.
Usage Guidelines	None	

Example

The following example shows how to view the summary of mDNS flexconnect sites:

```
Device# show mdns-sd flexconnect summary
```

show mdns-sd statistics

To view the mDNS statistics, use the **show mdns-sd statistics** command.

```
show mdns-sd statistics { debug | flexconnect | rlan-id <1 - 128> wired | wlan-id <1 - 4096>
}
```

Syntax Description	Parameter	Description
	debug	Specifies the mDNS debug statistics.
	flexconnect	Specifies the mDNS flexconnect statistics.
	rlan-id <1 - 128>	Specifies the remote LAN (RLAN) ID. The value range is from 1 to 128.
	wired	Specifies the mDNS wired statistics.
	wlan-id <1 - 4096>	Specifies the WLAN ID. The value range is from 1 to 4096.

Command Default None

Command Modes Privileged EXEC mode

Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.3.1	This command was introduced.

Usage Guidelines None

Example

The following example shows how to view the mDNS statistics:

```
Device# show mdns-sd statistics
```

show mdns-sd summary

To view the summary of mDNS service discovery configuration, use the **show mdns-sd summary** command.

```
show mdns-sd summary
```

Syntax Description	This command has no keywords or arguments.	
Command Default	None	
Command Modes	Privileged EXEC mode	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.3.1	This command was introduced.
Usage Guidelines	None	

Example

The following example shows how to view the summary of mDNS service discovery configuration:

```
Device# show mdns-sd summary
```

show mdns-sd sp-sdg statistics

To verify the Service-Peer SDG communication statistics, use the **show mdns-sd sp-sdg statistics** command.

show mdns-sd sp-sdg statistics

Syntax Description	This command has no keywords or arguments.	
Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.

The following example shows how to verify the Service-Peer SDG communication statistics:

```
Device# show mdns-sd sp-sdg statistics
                                One min, 5 mins, 1 hour
Average Input rate (pps) :    0,          0,          0
Average Output rate (pps) :    0,          0,          0
Messages sent:
Query : 0
ANY query : 0
Advertisements : 0
Advertisement Withdraw : 0
Interface down : 0
Vlan down : 0
Service-peer ID change : 0
Service-peer cache clear : 0
Resync response : 0
Keep-Alive : 1
Messages received:
Query response : 0
ANY Query response : 0
Cache-sync : 0
Get service-instance : 0
Keep-Alive response : 1
```

show nmosp

To display the Network Mobility Services Protocol (NMSP) configuration settings, use the **show nmosp** command.

```
show nmosp {attachment | {suppress interfaces} | capability | notification interval | statistics
{connection | summary} | status | subscription detail [ip-addr ] | summary}
```

Syntax Description		
attachment suppress interfaces		Displays attachment suppress interfaces.
capability		Displays NMSP capabilities.
notification interval		Displays the NMSP notification interval.
statistics connection		Displays all connection-specific counters.
statistics summary		Displays the NMSP counters.
status		Displays status of active NMSP connections.
subscription detail ip-addr		The details are only for the NMSP services subscribed to by a specific IP address.
subscription summary		Displays details for all of the NMSP services to which the controller is subscribed. The details are only for the NMSP services subscribed to by a specific IP address.

Command Default No default behavior or values.

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

The following is sample output from the **show nmosp notification interval** command:

```
Device# show nmosp notification interval
NMSP Notification Intervals
-----

RSSI Interval:
  Client           : 2 sec
  RFID             : 2 sec
  Rogue AP         : 2 sec
  Rogue Client     : 2 sec
Attachment Interval : 30 sec
Location Interval  : 30 sec
```

show nmosp cloud-services statistics

To see NMSP cloud-service statistics, use the **show nmosp cloud-services statistics** command.

show nmosp cloud-services statistics [**chassis** {*chassis-number* | **active** | **standby**} **R0**]

Syntax Description

chassis-number Chassis number as either 1 or 2.

active R0 Active instance of the active NMSP cloud services in Route-processor slot 0.

standby R0 Standby instance of the active NMSP cloud services in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

This example shows how to see NMSP cloud-service statistics:

```
Device# show nmosp cloud-services statistics
```

show nmsp cloud-services summary

To see a summary of information about NMSP cloud-services, use the **show nmsp cloud-services summary** command.

```
show nmsp cloud-services summary [chassis {chassis-number | active | standby} R0]
```

Syntax Description

chassis-number Chassis number as either 1 or 2.

active R0 Active instance of the NMSP cloud services in Route-processor slot 0.

standby R0 Standby instance of the active NMSP cloud services in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

This example shows how to see NMSP cloud-service summary information:

```
Device# show nmsp cloud-services summary
```

show nmsp subscription group detail all

To display the mobility services group subscription details of all CMX connections, use the **show nmsp subscription group detail all** command.

show nmsp subscription group detail all

Syntax Description	This command has no keywords or arguments.	
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Example

The following example shows how to display the mobility services group subscription details of all CMX connections:

```
Device# show nmsp subscription group detail all
```

show nmsp subscription group detail ap-list

To display the AP MAC list subscribed for a group by a CMX connection, use the **show nmsp subscription group detail ap-list** command.

show nmsp subscription group detail ap-list *group-name cmx-IP-address*

Syntax Description	<i>group-name</i>	CMX AP group name.
	<i>cmx-IP-address</i>	CMX IP address.
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Example

The following example shows how to verify the AP MAC list subscribed for a group by a CMX connection.

```
Device# show nmsp subscription group detail ap-list Group1 127.0.0.1

CMX IP address: 127.0.0.1
CMX Group name: Group1
CMX Group AP MACs:
: 00:00:00:00:70:02 00:00:00:00:66:02 00:99:00:00:00:02 00:00:00:bb:00:02
  00:00:00:00:55:02 00:00:00:00:50:02 00:33:00:00:00:02 00:d0:00:00:00:02
  00:10:00:10:00:02 00:00:00:06:00:02 00:00:00:02:00:02 00:00:00:00:40:02
  00:00:00:99:00:02 00:00:00:00:a0:02 00:00:77:00:00:02 00:22:00:00:00:02
  00:00:00:00:00:92 00:00:00:00:00:82 00:00:00:00:03:02 aa:00:00:00:00:02
  00:00:00:50:00:42 00:00:0d:00:00:02 00:00:00:00:00:32 00:00:00:cc:00:02
  00:00:00:88:00:02 20:00:00:00:00:02 10:00:00:00:00:02 01:00:00:00:00:02
  00:00:00:00:00:02 00:00:00:00:00:01 00:00:00:00:00:00
```

show nmsp subscription group detail services

To display the services subscribed for a group by a CMX connection, use the **show nmsp subscription group detail services** command.

show nmsp subscription group detail services *group-name cmx-IP-address*

Syntax Description	<i>group-name</i> CMX AP group name.				
	<i>cmx-IP-address</i> CMX IP address.				
Command Default	None				
Command Modes	Privileged EXEC (#)				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Gibraltar 16.10.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
Release	Modification				
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.				

Example

The following example shows how to verify the services subscribed for a group by a CMX connection.

```
Device# show nmsp subscription group detail services Group1 127.0.0.1

CMX IP address: 127.0.0.1
CMX Group name: Group1
CMX Group filtered services:
Service          Subservice
-----
RSSI              Mobile Station,
Spectrum
Info
Statistics
```

show nmsp subscription group summary

To display the mobility services group subscription summary of all CMX connections, use the **show nmsp subscription group summary** command.

show nmsp subscription group summary

Syntax Description	This command has no keywords or arguments.				
Command Default	None				
Command Modes	Privileged EXEC (#)				
Command History	<table><thead><tr><th>Release</th><th>Modification</th></tr></thead><tbody><tr><td>Cisco IOS XE Gibraltar 16.10.1</td><td>This command was introduced.</td></tr></tbody></table>	Release	Modification	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
Release	Modification				
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.				

Example

The following example shows how to verify the mobility services group subscription summary of all CMX connections.

```
Device# show nmsp subscription group summary

CMX IP address: 127.0.0.1
Groups subscribed by this CMX server:
Group name: Group1
```

show ntp associations

To display the status of Network Time Protocol (NTP) associations, use the **show ntp associations** command in privileged EXEC mode.

show ntp associations

Syntax Description	This command has no keywords or arguments.	
Command Default	None	
Command Modes	Privileged EXEC(#)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Example

The following example shows how to view NTP associations. :

```
Device# show ntp associations
  address          ref clock      st  when  poll reach  delay  offset  disp
*~10.1.1.99        72.163.32.44   2   918   1024   377   0.177   7.618  1.102
* sys.peer, # selected, + candidate, - outlyer, x falseticker, ~ configured
--
```

show parameter-map type webauth name

To verify the webauth parameters of a parameter map, use the **show parameter-map type webauth name** command.

show parameter-map type webauth name *parameter-map name*

Syntax Description

parameter-map name Name of the parameter map.

Command Default

None

Command Modes

Global configuration (config)

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to verify the webauth parameters of a parameter map:

```
Device# configure terminal
Device(config)# show parameter-map type webauth name parameter-map-name
```

show platform conditions

To see information about conditional debugs, use the **show platform conditions** command.

show platform conditions

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see information about conditional debugs:

```
Device# show platform conditions
```

show platform software wlvac status cp-exporter

To view the wireless AVC information from the control place exporter, use the **show platform software wlvac status cp-exporter** command.

show platform software wlvac status cp-exporter

Syntax Description	wlvac	Displays the wireless AVC information.
	status	Displays information about the AVC status.
	cp-exporter	Collects information from the Control Plane exporter.
Command Default	None	
Command Modes	Privileged EXEC (#) mode	
Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.2.1	This command was introduced.

Example

This example shows how to display the wireless AVC information from the control place exporter:

```
show platform software wlvac status cp-exporter
AVC FNF Exporter status
IP: 10.10.1.1
connection statistics
Sent bytes : 5672
Sent packets : 569
Received records : 564
Socket statistics
New sockets : 3
Closed sockets : 0
Library statistics AVC
cache errors : 0
Unexpected Flow Monitor ID : 0
Socket creation error : 0
Sent records : 240
Received packets : 800
```

show platform hardware slot R0 ha_port interface stats

To see the HA port interface setting status, use the **show platform hardware slot R0 ha_port interface stats** command.

show platform hardware slot R0 ha_port interface stats

Syntax Description	This command has no arguments or keywords.				
Command Modes	Privileged EXEC (#)				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Bengaluru 17.5.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Bengaluru 17.5.1	This command was introduced.
Release	Modification				
Cisco IOS XE Bengaluru 17.5.1	This command was introduced.				

Examples

This example shows how to see the HA port interface setting status:

```

Device# show platform hardware slot R0 ha_port interface stats
HA Port
ha_port  Link encap:Ethernet  HWaddr 70:18:a7:c8:80:70
          UP BROADCAST MULTICAST  MTU:1500  Metric:1
          RX packets:0 errors:0 dropped:0 overruns:0 frame:0
          TX packets:0 errors:0 dropped:0 overruns:0 carrier:0
          collisions:0 txqueuelen:1000
          RX bytes:0 (0.0 B)  TX bytes:0 (0.0 B)
          Memory:e0900000-e0920000

Settings for ha_port:
Supported ports:          [ TP ]
Supported link modes:    10baseT/Half 10baseT/Full
                        100baseT/Half 100baseT/Full
                        1000baseT/Full
Supported pause frame use: Symmetric
Supports auto-negotiation: Yes
Supported FEC modes:     Not reported
Advertised link modes:  10baseT/Half 10baseT/Full
                        100baseT/Half 100baseT/Full
                        1000baseT/Full
Advertised pause frame use: Symmetric
Advertised auto-negotiation: Yes
Advertised FEC modes:   Not reported

show platform software system all

To check status of the current virtual machine and look for performance issues due to inadequate resources (or other issues with the hosting environment), use the **set platform software system all** command in privileged EXEC mode.

show platform software system all

Syntax Description	This command has no keywords or arguments.
---------------------------	--

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Examples

This example shows how to check status of the current virtual machine and its resources:

```
Device# show platform software system all

Processor Details
=====
Number of Processors : 6
Processor : 1 - 6

```

show platform software trace filter-binary

To display the most recent trace information for a specific module, use the **show platform software trace filter-binary** command in privileged EXEC or user EXEC mode.

show platform software trace filter-binary *modules* [**context** *mac-address*]

Syntax Description	context <i>mac-address</i>	Represents the context used to filter. Additionally, you can filter based on module names and trace levels. The context keyword accepts either a MAC address or any other argument based on which a trace is tagged.
---------------------------	-----------------------------------	--

Command Modes	User EXEC (>) Privileged EXEC (#)
----------------------	--------------------------------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

Usage Guidelines	This command collates and sorts all the logs present in the <code>/tmp/.../</code> across all the processes relevant to the module. The trace logs of all the processes relevant to the specified module are printed to the console. This command also generates a file named <code>collated_log_{system time}</code> with the same content, in the <code>/crashinfo/tracelogs</code> directory.
-------------------------	--

Examples	This example shows how to display the trace information for a wireless module:
-----------------	--

```
Device# show platform software trace filter-binary wireless
```

show platform software trace level

To view the trace levels for all the modules under a specific process, use the **show platform software trace level** command in privileged EXEC or user EXEC mode.

Syntax Description	<i>process</i>	Process whose tracing level is being set. Options include:
		<ul style="list-style-type: none"> • chassis-manager—The Chassis Manager process. • cli-agent—The CLI Agent process. • cmm—The CMM process. • dbm—The Database Manager process. • emd—The Environmental Monitoring process. • fed—The Forwarding Engine Driver process. • forwarding-manager—The Forwarding Manager process. • geo—The Geo Manager process. • host-manager—The Host Manager process. • interface-manager—The Interface Manager process. • iomd—The Input/Output Module daemon (IOMd) process. • ios—The IOS process. • license-manager—The License Manager process. • logger—The Logging Manager process. • platform-mgr—The Platform Manager process. • pluggable-services—The Pluggable Services process. • replication-mgr—The Replication Manager process. • shell-manager—The Shell Manager process. • sif—The Stack Interface (SIF) Manager process. • smd—The Session Manager process. • stack-mgr—The Stack Manager process. • table-manager—The Table Manager Server. • thread-test—The Multithread Manager process. • virt-manager—The Virtualization Manager process. • wireless—The wireless controller module process.

<i>slot</i>	<p>Hardware slot where the process for which the trace level is set, is running. Options include:</p> <ul style="list-style-type: none"> • <i>number</i>—Number of the SIP slot of the hardware module where the trace level is set. For instance, if you want to specify the SIP in SIP slot 2 of the switch, enter 2. • <i>SIP-slot / SPA-bay</i>—Number of the SIP switch slot and the number of the shared port adapter (SPA) bay of that SIP. For instance, if you want to specify the SPA in bay 2 of the SIP in switch slot 3, enter 3/2. • F0—The Embedded Service Processor in slot 0. • F1—The Embedded Service Processor in slot 1. • FP active—The active Embedded Service Processor. • R0—The route processor in slot 0. • RP active—The active route processor. • switch <number> —The switch, with its number specified. • switch active—The active switch. • switch standby—The standby switch. <ul style="list-style-type: none"> • <i>number</i>—Number of the SIP slot of the hardware module where the trace level is set. For instance, if you want to specify the SIP in SIP slot 2 of the switch, enter 2. • <i>SIP-slot / SPA-bay</i>—Number of the SIP switch slot and the number of the shared port adapter (SPA) bay of that SIP. For instance, if you want to specify the SPA in bay 2 of the SIP in switch slot 3, enter 3/2. • F0—The Embedded Service Processor in slot 0. • FP active—The active Embedded Service Processor. • R0—The route processor in slot 0. • RP active—The active route processor.

```

show platform software trace message license-manager chassis active R0

To display the trace message for license-manager process of active route processor, use the **show platform software trace message license-manager chassis active R0** command in privileged EXEC mode.

```
show platform software trace message license-manager chassis {chassis-number
| active | standby}R0reverse
```

This command has no arguments or keywords.

show policy-map

To display quality of service (QoS) policy maps, which define classification criteria for incoming traffic, use the **show policy-map** command in EXEC mode.

```
show policy-map [{policy-map-name | interface interface-id}]
```

```
show policy-map interface {Auto-template | Capwap | GigabitEthernet | GroupVI |
InternalInterface | Loopback | Lspvif | Null | Port-channel | TenGigabitEthernet | Tunnel
| Vlan | brief | class | input | output
```

```
show policy-map interface {ap name ap_name | client mac mac_address | radio type {24ghz |
5ghz} ap name ap_name | ssid name ssid_name {ap name ap_name | radio type {24ghz | 5ghz}
ap name ap_name}}
```

Syntax Description

<i>policy-map-name</i>	(Optional) Name of the policy-map.
interface <i>interface-id</i>	(Optional) Displays the statistics and the configurations of the input and output policies that are attached to the interface.
ap name <i>ap_name</i>	Displays SSID policy configuration of an access point.
client mac <i>mac_address</i>	Displays information about the policies for all the client targets.
radio type { 24ghz 5ghz }	Displays policy configuration of the access point in the specified radio type.
ssid name <i>ssid_name</i>	Displays policy configuration of an SSID.

Command Modes

	This command w

Usage Guidelines

Policy maps can include policers that specify the bandwidth limitations and the action to take if the limits are exceeded.

Note Though visible in the command-line help string, the **control-plane**, **session**, and **type** keywords are not supported, and the statistics shown in the display should be ignored.

To display classification counters for ternary content addressable memory (TCAM) (marking or policing) based policies, enter the interface ID. Classification counters have the following restrictions:

- Classification counters are supported only on wired ports (in the ingress and egress directions).
- Classification counters count packets instead of bytes.
- Only QoS configurations with marking or policing trigger the classification counter.
- As long as there is policing or marking action in the policy, the class-default will have classification counters.
- Classification counters are not port based. The counters are shared across targets sharing the same policy map. This means that the classification counter aggregates all packets belonging to the same class of the same policy which attach to different interfaces.

This is an example of output from the **show policy-map interface** command, where classification counters are displayed:

```
Device# show policy-map interface gigabitethernet1/0/1

```

show rate-limit client

To configure the rate-limit for a client on the AP, use the **show rate-limit client** command.

show rate-limit client

Syntax Description	This command has no arguments.	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

The following example shows how to configure the rate-limit for a client on the AP:

```
Device# show rate-limit client
Config:
mac vap rt_rate_out rt_rate_in rt_burst_out rt_burst_in nrt_rate_out nrt_rate_in nrt_burst_out
  nrt_burst_in
00:1C:F1:09:85:E7 0 8001 8002 8003 8004 8005 8006 8007 8008
Statistics:
name up down
Unshaped 0 0
Client RT pass 0 0
Client NRT pass 0 0
Client RT drops 0 0
Client NRT drops 0 0
Per client rate limit:
mac vap rate_out rate_in policy
```

show ssh

To see the SSH connection status, use the **show ssh** command.

```
show ssh {connection-number | {vtty connection-number } }
```

Syntax Description	<i>connection-number</i> SSH connection number. Valid range is 0 to 530.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	Privileged EXEC
----------------------	-----------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the SSH connection status:

```
Device# show ssh connection-number
```

show stealthwatch-cloud connection

To view the connection details of Stealthwatch Cloud, use the **show stealthwatch-cloud connection** command.

show stealthwatch-cloud connection

Syntax Description	This command has no keywords or arguments.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	Privileged EXEC mode
----------------------	----------------------

Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.4.1	This command was introduced.

Usage Guidelines	None
-------------------------	------

Example

The following example shows how to view the connection details of Stealthwatch Cloud:

```
Device# show stealthwatch-cloud connection
```

show stealthwatch-cloud wireless-shim

To view the wireless-shim details of Stealthwatch Cloud, use the **show stealthwatch-cloud wireless-shim** command.

show stealthwatch-cloud wireless-shim

Syntax Description	This command has no keywords or arguments.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	Privileged EXEC mode
----------------------	----------------------

Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.4.1	This command was introduced.

Usage Guidelines	None
-------------------------	------

Example

The following example shows how to view the wireless-shim details of Stealthwatch Cloud:

```
Device# show stealthwatch-cloud wireless-shim
```

show tech-support wireless

To display Cisco wireless LAN controller variables frequently requested by Cisco Technical Assistance Center (TAC), use the **show tech-support wireless** command in privileged EXEC mode.

show tech-support wireless

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

The following is sample output from the **show tech-support wireless** command:

```
Device# show tech-support wireless
*** show ap capwap timers ***

show tech-support wireless ap

To display specific information about the Cisco APs variables frequently requested by Cisco Technical Assistance Center (TAC), use the **show tech-support wireless ap** command in privileged EXEC mode.

show tech-support wireless ap

Syntax Description	This command has no arguments or keywords.	
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Usage Guidelines The output of the following commands are displayed as part of **show tech-support wireless ap** command:

- show ap session termination statistics
- show ap status
- show ap tag summary
- show platform software bssid chassis active F0 statistics
- show platform software bssid chassis active R0 statistics
- show platform software capwap chassis active F0 statistics
- show platform software capwap chassis active R0 statistics
- show platform software dtls chassis active F0 statistics
- show platform software dtls chassis active R0 statistics
- show platform software radio chassis active F0 statistics
- show platform software radio chassis active R0 statistics

Example

The following is sample output from the **show tech-support wireless ap** command

```
Device# show tech-support wireless ap
----- show platform software dtls chassis active R0 statistics -----
DTLS Counters      (Success/Failure)
-----
Create              0/0
```

```
Delete                0/0
```

```
Switch 1:
OM Create             0/0
OM Delete             0/0
Ack Nack Notify      0/0
```

```
----- show platform software radio chassis active R0 statistics
-----
```

```
Switch 1:

show tech-support wireless client

To print the data related to all clients or a particular client, use the **show tech-support wireless client** command in privileged EXEC mode.

show tech-support wireless client

Syntax Description	mac-address Client MAC address.				
Command Default	None				
Command Modes	Privileged EXEC (#)				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Gibraltar 16.10.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.
Release	Modification				
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.				

Usage Guidelines The output of the following commands are displayed as part of **show tech-support wireless client** command:

- show platform software wireless-client chassis active F0 statistics
- show platform software wireless-client chassis active R0 statistics
- show wireless client calls active
- show wireless client calls rejected
- show wireless client client-statistics summary
- show wireless client device summary
- show wireless client mac <mac-addr> details
- show wireless client probing
- show wireless client sleeping-client
- show wireless client statistic
- show wireless client steering
- show wireless client summary
- show wireless exclusionlist
- show wireless pmk-cache

Example

The following is sample output from the **show tech-support wireless client** command

show tech-support wireless client

```
Device# show tech-support wireless client
```

```
----- show wireless stats client summary -----
```

```
Number of Local Clients : 0
```

```
MAC Address      AP Name          WLAN UpTime(secs) Rx Pkts Tx Pkts RSSI SNR

show tech-support wireless radio

To print the data related to the radio, use the **show tech-support wireless radio** command in privileged EXEC mode.

show tech-support wireless radio

Syntax Description	This command has no keywords or arguments.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Usage Guidelines The output of the following commands are displayed as part of **show tech-support wireless radio** command:

- show ap auto-rf dot11 24ghz
- show ap auto-rf dot11 5ghz
- show ap config dot11 dual-band summary
- show ap config general
- show ap dot11 24ghz channel
- show ap dot11 24ghz coverage
- show ap dot11 24ghz group
- show ap dot11 24ghz high-density
- show ap dot11 24ghz load-info
- show ap dot11 24ghz monitor
- show ap dot11 24ghz network
- show ap dot11 24ghz summary
- show ap dot11 24ghz txpower
- show ap dot11 5ghz channel
- show ap dot11 5ghz coverage
- show ap dot11 5ghz group
- show ap dot11 5ghz high-density
- show ap dot11 5ghz load-info

- show ap dot11 5ghz monitor
- show ap dot11 5ghz network
- show ap dot11 5ghz summary
- show ap dot11 5ghz txpower
- show ap fra
- show ap rf-profile name Rfl detail
- show ap rf-profile summary
- show ap summary
- show wireless band-select

Example

The following is sample output from the **show tech-support wireless radio** command

```
Device# show tech-support wireless radio
----- show ap summary -----

show tunnel eogre global-configuration

To display the Ethernet over GRE (EoGRE) global configuration, use the **show tunnel eogre global-configuration** command.

show tunnel eogre global-configuration

Syntax Description	This command has no keywords or arguments.	
Command Default	None	
Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.11.1	This command was introduced.

Example

This example shows how to display the EoGRE global configuration:

```
Device# show tunnel eogre global-configuration

Heartbeat interval      : 60
Max Heartbeat skip count : 3
Source Interface       : (none)
```

show tunnel eogre domain detailed

To display the detailed information of the Ethernet over GRE (EoGRE) tunnel domain, use the **show tunnel eogre domain detailed** command.

show tunnel eogre domain detailed *domain-name*

Syntax Description	<i>domain-name</i> EoGRE domain name.				
Command Default	None				
Command Modes	Privileged EXEC (#)				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Gibraltar 16.11.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Gibraltar 16.11.1	This command was introduced.
Release	Modification				
Cisco IOS XE Gibraltar 16.11.1	This command was introduced.				

Example

This example shows how to display the detailed information of the EoGRE tunnel domain:

```
Device# show tunnel eogre domain detailed eogre_domain

Domain Name      : eogre_domain
Primary GW       : Tunnel1
Secondary GW     : Tunnel2
Active GW        : Tunnel1
Redundancy       : Non-Revertive
```

show tunnel eogre domain summary

To display the summary information of the Ethernet over GRE (EoGRE) tunnel domain, use the **show tunnel eogre domain summary** command.

show tunnel eogre domain summary

Syntax Description	This command has no keywords or arguments.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.11.1	This command was introduced.

Example

This example shows how to display the summary information of the EoGRE tunnel domain:

```
Device# show tunnel eogre domain summary
```

Domain Name	Primary GW	Secondary GW	Active GW	Redundancy
domain1	Tunnel1	Tunnel2	Tunnel1	Non-Revertive
eogre_domain	Tunnel1	Tunnel2	Tunnel1	Non-Revertive

show tunnel eogre gateway summary

To display the summary information of the Ethernet over GRE (EoGRE) tunnel gateway, use the **show tunnel eogre gateway summary** command.

show tunnel eogre gateway summary

Syntax Description	This command has no keywords or arguments.				
Command Default	None				
Command Modes	Privileged EXEC (#)				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Gibraltar 16.11.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Gibraltar 16.11.1	This command was introduced.
Release	Modification				
Cisco IOS XE Gibraltar 16.11.1	This command was introduced.				

Example

This example shows how to display the summary information of the EoGRE tunnel gateway:

```
Device# show tunnel eogre gateway summary
```

Name	Type	Address	AdminState	State	Clients
Tunnel1	IPv4	9.51.1.11	Up	Up	0
Tunnel2	IPv4	9.51.1.12	Up	Down	0
Tunnel10	IPv6	fd09:9:8:21::90	Down	Down	0
Tunnel11	IPv4	9.51.1.11	Up	Up	0
Tunnel12	IPv6	fd09:9:8:21::90	Up	Down	0
Tunnel100	IPv4	9.51.1.100	Up	Down	0

show tunnel eogre gateway detailed

To display the detailed information of the Ethernet over GRE (EoGRE) tunnel domain, use the **show tunnel eogre gateway detailed** command.

show tunnel eogre gateway detailed *gateway-name*

Syntax Description	<i>gateway-name</i> EoGRE gateway name.				
Command Default	None				
Command Modes	Privileged EXEC (#)				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Gibraltar 16.11.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Gibraltar 16.11.1	This command was introduced.
Release	Modification				
Cisco IOS XE Gibraltar 16.11.1	This command was introduced.				

Example

This example shows how to display the detailed information of the EoGRE tunnel gateway:

```
Device# show tunnel eogre domain detailed Tunnell
```

```
Gateway : Tunnell
Mode    : IPv4
IP      : 9.51.1.11
Source  : Vlan51 / 9.51.1.1
State   : Up
SLA ID  : 56
MTU     : 1480
Up Time: 4 minutes 45 seconds

show wireless stats ap history

To verify historical statistics of an AP, use the **show wireless stats ap history** command.

show wireless stats ap history

Syntax Description This command has no keywords or arguments.

Command Default None

Command Modes Privileged EXEC#

Command History	Release	Modification
	Cisco IOS XE Cupertino 17.7.1	This command was introduced.

Examples

This example shows how to verify the statistics of the access point history:

```

Device# show wireless stats ap history
AP Name          Radio MAC      Event      Time              Recent      Disconnect
Reason          Disconnect

show wireless band-select

To display the status of the band-select configuration, use the **show wireless band-select** command in privileged EXEC mode.

show wireless band-select

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	No default behavior or values.
------------------------	--------------------------------

Command Modes	Privileged EXEC
----------------------	-----------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

The following is sample output from the **show wireless band-select** command:

```
Device# show wireless band-select
Band Select Probe Response    : per WLAN enabling
Cycle Count                   : 2
Cycle Threshold (millisec)    : 200
Age Out Suppression (sec)     : 20
Age Out Dual Band (sec)       : 60
Client RSSI (dBm)             : 80
```

show wireless client

To see the summary of the classified devices, use the **show wireless client** command.

```
show wireless client device {cache | count | summary } | {steering}[{chassis{chassis-number | active | standby }}]R0
```

Syntax Description	device	Shows classified devices.
	steering	Wireless client steering information
	cache	Shows the cached classified device summary.
	count	Shows the wireless device count.
	summary	Shows the active classified device summary.
	<i>chassis-number</i>	Chassis number. Valid range is 1–2.
	active	Active instance.
	standby	Standby instance.
	R0	Route-Processor slot 0.

Command Default None

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the summary of the classified devices:

```
Device# show wireless client device summary
```

show wireless client mac-address

To view detailed information of a client using its mac-address, use the **show wireless client mac-address detail** command.

show wireless client mac-address *mac-address* **detail** [**chassis** {*chassis-number* | **active** | **standby**} **R0**]

Syntax Description

<i>mac-address</i>	Client MAC address.
<i>chassis-number</i>	Chassis number. Valid range is 1–2.
active	Active instance.
standby	Standby instance.
R0	Route-Processor slot 0.

Command Default

None

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Usage Guidelines

The Client Scan Reports section in the output of the **show wireless client mac-address detail** is populated only for the following Apple devices:

- Any iPhone 7 and running iOS 11.0 or higher
- Any iPad after iPad Pro (1st gen, 12.9-inch, 2015) and running iOS 11.0 or higher

Other client devices, even if it supports 802.11k or is Wi-Fi Agile Multiband (MBO) certified, are not currently supported to populate the Client Scan Reports section.

Client ACLs shown under **show wireless client mac-address <mac address> detail** are ACLs applied on the client in Flexconnect local authentication case with MAB+Web authentication WLAN with AAA override enabled. This is applicable only for Express Wi-Fi by Facebook Policy on Controller. For more information about Facebook policy, see [Express Wi-Fi by Facebook](#).

From Cisco IOS XE Amsterdam 17.3.1 onwards, the controller retains client session for 10 seconds. This feature is applicable for clients in the RUN state and is supported on central authentication with local and flex mode.

In idle state, 10 sec represents idle state timeout and 09 sec represent remaining time out of 10 sec. An example is given below:

```
Idle state timeout : 10 sec (Remaining time: 09 sec)
```

Examples

The following example shows how to see detailed client information using its MAC address:

```
Device# show wireless client mac-address 98-XX-7B-XX-EF-XX detail
```

show wireless client mac-address (Call Control)

To view call control information related to clients, use the **show wireless client mac-address** command in privileged EXEC mode.

show wireless client mac-address *mac-address* **call-control call-info**

Syntax Description	<i>mac-address</i>	The client MAC address.
	call-control call-info	Displays the call control and IP-related information about a client.
Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
		This command was introduced.

This example shows how to display call control and IP-related information about a client:

```
Device# show wireless client mac-address 30e4.db41.6157 call-control call-info
Client MAC Address      : 30E4DB416157

Call 1 Statistics

```

show wireless client mac-address (TCLAS)

To view information about TCLAS and user priority, use the **show wireless client mac-address** command in privileged EXEC mode.

```
show wireless client mac-address mac-address tclas
```

Syntax Description

<i>mac-address</i>	The client MAC address.
tclas	Displays TCLAS and user priority-related information about a client.

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

This example shows how to display the TCLAS and user priority-related information about a client:

```
Device# show wireless client mac-address 30e4.db41.6157 tclas
MAC Address      UP TID Mask Source IP Addr  Dest IP Addr  SrcPort DstPort Proto
-----
30e4.db41.6157   4  4  95 167838052      2164326668    5060    5060    6
30e4.db41.6157   6  1  31 0              2164326668    0       27538   17
```

show wireless client summary

To display a summary of active clients associated with the controller, use the **show wireless client summary** command in privileged EXEC mode.

show wireless client summary

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Usage Guidelines The following is sample output from the **show wireless client summary** command:
Use the **show wireless exclusionlist** command to display clients on the exclusion list.

```
Device# show wireless client summary
```

```
Number of Clients: 1
```

MAC Address	AP Name	Type ID	State	Protocol	Method	Role
6c40.0899.0466	9115i-r4-sw2-te1-0-37	WLAN 7	Run	11ac	None	Local

show wireless client timers

To display 802.11 system timers, use the **show wireless client timers** command in privileged EXEC mode.

show wireless client timers

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

The following is sample output from the **show wireless client timers** command:

```
Device# show wireless client timers
Authentication Response Timeout (seconds)      : 10
```

The following is sample output from the **show wireless country configured** command:

```
Device# show wireless country configured
Configured Country.....: US - United States
Configured Country Codes
    US - United States : 802.11a Indoor,Outdoor/ 802.11b / 802.11g
```

The following is sample output from the **show wireless country supported tx-power** command:

```
Device# show wireless country supported tx-power
KEY: ##      = Tx Power in dBm.
     ##*     = Channel supports radar detection .
     .       = Channel is not legal in this country.
     (-)     = Regulatory Domains allowed by this country.
     (-,-)   = (indoor, outdoor) regulatory Domains allowed by this country.
-----:+++++-----:
      802.11bg      :
      Channels      :                1 1 1 1 1
                   : 1 2 3 4 5 6 7 8 9 0 1 2 3 4

```

show wireless detail

To display the details of the wireless parameters configured, use the **show wireless detail** command in privileged EXEC mode.

show wireless detail

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

Usage Guidelines The following parameters are displayed:

- The wireless user idle timeout
- The controller configured RF group name
- Fast SSID change

The following is sample output from the **show wireless detail** command:

```
Device# show wireless detail
User Timeout           : 300
RF network              : default
Fast SSID              : Disabled
```

show wireless dhcp relay statistics

To configure the wireless DHCP relay on the AP, use the **show wireless dhcp relay statistic** command.

show wireless dhcp relay statistic

Syntax Description	<i>A.B.C.D</i> Indicates the target IPv4 address.
---------------------------	---

Command Default	None
------------------------	------

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 17.3.1	This command was introduced.

Examples

The following example shows how to configure the wireless DHCP relay on the AP:

```
Device# show wireless dhcp relay statistics ip-address 10.1.1.1
```

show wireless dot11h

To see 802.11h configuration details, use the **show wireless dot11h** command.

show wireless dot11h [**chassis** {*chassis-number* | **active** | **standby**} **R0**]

Syntax Description

chassis-number Chassis number. Valid range is 1–2.

active Active instance.

standby Standby instance.

R0 Route-Processor slot 0.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the 802.11h configuration details:

```
Device# show wireless dot11h
```

show wireless dtls connections

To display the Datagram Transport Layer Security (DTLS) server status, use the **show wireless dtls connections** command in privileged EXEC mode.

show wireless dtls connections

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

The following is sample output from the **show wireless dtls connections** command:

```
Device# show wireless dtls connections
AP Name          Local Port    Peer IP      Peer Port    Ciphersuite
-----
AP-2             Capwap_Ctrl  10.0.0.16   52346        TLS_RSA_WITH_AES_128_CBC_SHA
AP-3             Capwap_Ctrl  10.0.0.17   52347        TLS_RSA_WITH_AES_128_CBC_SHA
```

show wireless exclusionlist

To see the wireless exclusion list, use the **show wireless exclusionlist** command.

```
show wireless exclusionlist [{client mac-address client-mac-addr detail }] [chassis {chassis-number | active | standby} R0]
```

Syntax Description

client-mac-addr Client MAC address.

chassis-number Enter the chassis number as either 1 or 2.

active R0 Active instance of the configuration in Route-processor slot 0.

standby R0 Standby instance of the configuration in Route-processor slot 0.

Command Default

None

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the wireless exclusion list:

```
Device# show wireless exclusionlist
```

```
Excluded Clients
```

MAC Address	Description	Exclusion Reason	Time Remaining
10da.4320.cce9		Client Policy failure	59

show wireless load-balancing

To display the status of the load-balancing feature, use the **show wireless load-balancing** command in privileged EXEC mode.

show wireless load-balancing

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Default	No default behavior or values.
------------------------	--------------------------------

Command Modes	Privileged EXEC
----------------------	-----------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

The following is sample output from the **show wireless load-balancing** command:

```
> show wireless load-balancing
Aggressive Load Balancing.....: per WLAN enabling
Aggressive Load Balancing Window (clients).....: 5
Aggressive Load Balancing Denial Count.....: 3

Statistics
Total Denied Count (clients).....: 0
Total Denial Sent (messages).....: 0
Exceeded Denial Max Limit Count (times).....: 0
None 5G Candidate Count (times).....: 0
None 2.4G Candidate Count (times).....: 0
```

show wireless mesh rrm dca status

To display the status of the last DCA run per radio, use the **show wireless mesh rrm dca status** command.

show wireless mesh rrm dca status

Syntax Description	This command has no keywords or arguments.	
Command Default	None	
Command Modes	Privileged EXEC(#)	
Command History	Release	Modification
	Cisco IOS XE Cupertino 17.9.1	This command was introduced.

Example

This example shows how to display the status of the last DCA run per radio:

```
Device# show wireless mesh rrm dca status
```

show wireless ewc-ap ap summary

To view the embedded wireless controller AP summary, use the **show wireless ewc-ap ap summary** command.

show wireless ewc-ap ap summary [**chassis** {*chassis_number* | **active** | **standby**} {**R0**}]

Syntax	Description
ewc-ap	Configures the embedded wireless controller parameters.
ap summary	Displays the embedded wireless controller AP, AP summary.
chassis	Indicates the details of the chassis.
<i>chassis-number</i>	Indicates the chassis number, which is either 1 or 2..
R0	Indicates Route Processor slot 0.
Active	Indicates the active operational mode of the AP chassis.
Standby	Indicates the standby operational mode of the AP chassis.

Command Default None

Command Modes Privileged EXEC mode

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

Example

The following example shows how to view the embedded wireless controller, AP summary:

```
Device#show wireless ewc-ap ap summary
```

show wireless ewc-ap ap config-sync

To view the embedded wireless controller AP configuration synchronization information or summary, use the **show wireless ewc-ap ap config-sync** command.

```
show wireless ewc-ap ap config-sync summary [ chassis {chassis_number | active | standby} {R0}]
```

Syntax Description	config-sync Configures the embedded wireless controller parameters.				
Command Default	None				
Command Modes	Privileged EXEC mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Gibraltar 16.12.2s</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.
Release	Modification				
Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.				

Example

The following example shows how to view the embedded wireless controller AP configuration synchronization information or summary:

```
Device#show wireless ewc-ap ap config-sync summary
```

show wireless ewc-ap ap image predownload status

To view the AP image predownload statistics, use the **show wireless ewc-ap ap image predownload status** command.

show wireless ewc-ap ap image predownload status

Syntax Description	This command has no keywords or arguments.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	Privileged EXEC mode
----------------------	----------------------

Command History	Release	Modification
	Cisco IOS XE Amsterdam 17.3.1	This command was introduced.

Usage Guidelines	None
-------------------------	------

Example

The following example shows how to view the AP image predownload statistics:

```
Device#show wireless ewc-ap ap image predownload status
```

show wireless ewc-ap country-code

To view the default country codes and the supported country codes of the embedded wireless controller AP, use the **show wireless ewc-ap country-code** command.

```
show wireless ewc-ap country-code [ chassis { chassis_number | active | standby } { R0 } ]
```

Syntax Description	country-code Indicates the default country codes and the supported country codes.				
Command Default	None				
Command Modes	Privileged EXEC mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Cisco IOS XE Gibraltar 16.12.2s</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.
Release	Modification				
Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.				

Example

The following example shows how to view the default and supported country codes of embedded wireless controller AP:

```
Device#show wireless ewc-ap country-codes
```

show wireless ewc-ap image-master

To view the image maser information, use the **show wireless ewc-ap image-master** command.

show wireless ewc-ap image-master [**chassis** {*chassis_number* | **active** | **standby**} {**R0**}]

Syntax Description	image-master Indicates the image master information.
---------------------------	---

Command Default	None
------------------------	------

Command Modes	Privileged EXEC mode
----------------------	----------------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

Example

The following example shows how to view the image master information:

```
Device#show wireless ewc-ap image-master
```

show wireless ewc-ap invalid-image-master

To view the details of the invalid image master, use the **show wireless ewc-ap invalid-image-master** command.

```
show wireless ewc-ap invalid-image-master [chassis {chassis_number | active | standby} {R0}]
```

Syntax Description	invalid-image-master Indicates the invalid image master information.
---------------------------	---

Command Default	None
------------------------	------

Command Modes	Privileged EXEC mode
----------------------	----------------------

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.2s	This command was introduced.

Example

The following example shows how to view the invalid image master information:

```
Device#show wireless ewc-ap invalid-image-master
```

show wireless ewc-ap predownload

To view the image predownload information, use the **show wireless ewc-ap predownload** command.

```
show wireless ewc-ap predownload { count | status } [ chassis { chassis_number | active | standby }
{ R0 } ]
```

Syntax Description	predownload Indicates the image predownload information.
	count Indicates the image predownload count.
	status Indicates the image predownload status.
Command Default	None
Command Modes	Privileged EXEC mode
Command History	Release
	Modification
	Cisco IOS XE Gibraltar 16.12.2s This command was introduced.

Example

The following example shows how to view the image predownload count and status:

```
Device#show wireless ewc-ap predownload
```

show wireless ewc-ap redundancy summary

To view the HA redundancy summary, use the **show wireless ewc-ap redundancy summary** command.

show wireless ewc-ap redundancy summary [**chassis** {*chassis_number* | **active** | **standby**} {**R0**}]

Syntax Description	
redundancy	Indicates the HA redundancy information.
summary	Indicates the summary of HA redundancy.

Command Default None

Command Modes Privileged EXEC mode

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

Example

The following example shows how to view the default and supported country codes of embedded wireless controller AP:

```
Device#show wireless ewc-ap redundancy summary
```

show wireless ewc-ap redundancy peers

To view the HA redundancy peers, use the **show wireless ewc-ap redundancy peers** command.

show wireless ewc-ap redundancy peers [**chassis** {*chassis_number* | **active** | **standby**} {**R0**}]

Syntax Description	
redundancy	Indicates the HA redundancy information.
peers	Indicates the peers of HA redundancy.

Command Default None

Command Modes Privileged EXEC mode

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

Example

The following example shows how to view the default and supported country codes of embedded wireless controller AP:

```
Device#show wireless ewc-ap redundancy peers
```

show wireless mesh ethernet daisy-chain summary

To verify the ethernet daisy chain summary, use the **show wireless mesh ethernet daisy-chain summary** command.

show wireless mesh ethernet daisy-chain summary

Syntax Description	This command has no keywords or arguments.	
Command Default	None	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.4.1	This command was introduced.

The following example shows how to verify the ethernet daisy chain summary:

Device# **show wireless mesh ethernet daisy-chain summary**

AP Name	BVI	MAC	BGN	Backhaul	Ethernet	STP	Red	
RAP4	683b.78bf.15f0	IOT	Ethernet0	Up	Up	Dn	Dn	Enabled
RAP3	683b.78bf.1634	IOT	Ethernet0	Up	Up	Dn	Dn	Enabled
RAP1	6c8b.d383.b4d4	IOT	Ethernet0	Up	Up	Dn	Dn	Enabled
RAP2	6c8b.d383.b4e8	IOT	Ethernet0	Up	Up	Up	Dn	Enabled

show wireless mesh ethernet daisy-chain bgn

To verify the ethernet daisy chain Bridge Group Name (BGN) details, use the **show wireless mesh ethernet daisy-chain bgn** command.

show wireless mesh ethernet daisy-chain bgn *bridge-group-name*

Syntax Description	<i>bridge-group-name</i> Enter the bridge group name.
---------------------------	---

Command Default	None
------------------------	------

Command Modes	Privileged EXEC
----------------------	-----------------

Command History	Release	Modification
	Cisco IOS XE Bengaluru 17.4.1	This command was introduced.

The following example shows how to verify the ethernet daisy chain Bridge Group Name (BGN) details:

Device# **show wireless mesh ethernet daisy-chain bgn <IOT>**

AP Name	BVI MAC	BGN	Backhaul	Ethernet	STP Red
RAP4	683b.78bf.15f0	IOT	Ethernet0	Up Up Dn Dn	Enabled
RAP3	683b.78bf.1634	IOT	Ethernet0	Up Up Dn Dn	Enabled
RAP1	6c8b.d383.b4d4	IOT	Ethernet0	Up Up Dn Dn	Enabled
RAP2	6c8b.d383.b4e8	IOT	Ethernet0	Up Up Up Dn	Enabled

show wireless pmk-cache

To display information about the pairwise master key (PMK) cache, use the **show wireless pmk-cache** command in privileged EXEC mode.

```
show wireless pmk-cache[mac-address mac-addr]
```

Syntax Description	mac-address <i>mac-addr</i> (Optional) Information about a single entry in the PMK cache.				
Command Default	No default behavior or values.				
Command Modes	Privileged EXEC				
Command History	<table><thead><tr><th>Release</th><th>Modification</th></tr></thead><tbody><tr><td>Cisco IOS XE Gibraltar 16.12.1</td><td>This command was introduced.</td></tr></tbody></table>	Release	Modification	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.
Release	Modification				
Cisco IOS XE Gibraltar 16.12.1	This command was introduced.				

The following is sample output from the **show wireless pmk-cache mac-address** command:

```
Device# show wireless pmk-cache mac-address H.H.H  
Number of PMK caches in total : 0
```

show wireless profile flex

To see the flex parameters of an wireless profile, use the **show wireless profile flex** command.

```
show wireless profile flex { detailed flex-profile-name chassis {chassis-number | active | standby } R0
} | summary chassis {chassis-number | active | standby} R0}
```

Syntax Description		
detailed	Shows the flex-profile detailed parameters	
summary	Show the flex-profile summary.	
<i>chassis-number</i>	Chassis number. Valid range is 1–2.	
active	Active instance.	
standby	Standby instance.	
R0	Route-Processor slot 0.	

Command Default None

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the flex parameter's summary of the wireless profile:

```
Device# show wireless profile flex summary
```

show wireless profile policy detailed

To display the wireless policy profile details, use the **show wireless profile policy detailed** command.

show wireless profile policy detailed *policy-profile-name*

Syntax Description	This command has no keywords or arguments.				
Command Default	None				
Command Modes	Privilege EXEC (#)				
Command History	<table><thead><tr><th>Release</th><th>Modification</th></tr></thead><tbody><tr><td>Cisco IOS XE Amsterdam 17.2.1</td><td>This command was introduced.</td></tr></tbody></table>	Release	Modification	Cisco IOS XE Amsterdam 17.2.1	This command was introduced.
Release	Modification				
Cisco IOS XE Amsterdam 17.2.1	This command was introduced.				

Example

This example displays the wireless policy profile details:

```
Device#show wireless profile policy detailed policy-profile-name
```

show wireless rfid

To display RFID tag information, use the **show wireless rfid** command in privileged EXEC mode.

show wireless rfid { **client** | **detail** *rfid-mac-address* | **stats** | **summary** }

Syntax Description		
client		Displays the summary of RFID tags that are clients.
detail		Displays information about a particular RFID tag.
stats		Displays RFID statistics.
summary		Displays summary information for all known RFID tags.
<i>rfid-mac-address</i>		RFID MAC address.

Command Default None

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Example

This example shows how to view RFID information:

```
Device# show wireless rfid summary
```

```
Total RFID entries: : 16
Total Unique RFID entries : 16
RFID ID VENDOR Closet AP RSSI Time Since Last Heard
0012.b80a.c791 Cisco 7069.5a63.0520 -31 1 minute 40 seconds ago
0012.b80a.c953 Cisco 7069.5a63.0460 -33 2 minutes 15 seconds ago
0012.b80b.806c Cisco 7069.5a63.0260 -45 22 seconds ago
0012.b80d.e9f9 Cisco 7069.5a63.0460 -38 2 minutes 37 seconds ago
0012.b80d.ea03 Cisco 7069.5a63.0520 -43 2 minutes 38 seconds ago
0012.b80d.ea6b Cisco 7069.5a63.0460 -39 2 minutes 35 seconds ago
0012.b80d.ebe8 Cisco 7069.5a63.0520 -43 1 minute 31 seconds ago
0012.b80d.ebeb Cisco 7069.5a63.0520 -43 2 minutes 37 seconds ago
0012.b80d.ec48 Cisco 7069.5a63.0460 -42 2 minutes 16 seconds ago
0012.b80d.ec55 Cisco 7069.5a63.0520 -41 1 second ago
```

show wireless stats redundancy config database

To view the high availability redundancy configuration statistics, use the **show wireless stats redundancy config database** command.

```
show wireless stats redundancy config database { mobility | nmspd | rrm | wncd | wncmgrd
} instance-id chassis { chassis-num | active | standby } R0
```

Syntax Description

mobility	Specifies the statistics of Mobilityd configuration database.
nmspd	Specifies the statistics of NMSPD configuration database.
rrm	Specifies the statistics of RRM configuration database.
wncd	Specifies the statistics of WNCD configuration database.
wncmgrd	Specifies the statistics of WNCD configuration database.
<i>instance-id</i>	Instance ID. Valid values range from 0 to 7.
chassis	Specifies the chassis.
<i>chassis-num</i>	Chassis number.
active	Specifies the active instance.
standby	Specifies the standby instance.
R0	Specifies the route processor slot.

Command Default

None

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
Cisco IOS XE Cupertino 17.7.1	This command was introduced.

Examples

The following example shows how to view the high availability redundancy configuration statistics:

```
Device# show wireless stats redundancy config database wncd 0 chassis 1 R0

Wncd Configuration Sync Statistics
  Index   Number of Locks   Duration(sec)   Threshold-count   Max-Duration(nsec)
-----
      1         535             127             1                 1112156700
```

show wireless summary

To display the number of access points, radios and wireless clients known to the controller, use the **show wireless summary** command in privileged EXEC mode.

show wireless summary

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

The following is sample output from the **show wireless summary** command:

```
Device# show wireless summary
```

```
Access Point Summary
```

	Total	Up	Down
802.11a/n	2	2	0
802.11b/g/n	2	2	0
All APs	2	2	0

```
Client Summary
```

```
Current Clients : 1
Excluded Clients: 0
Disabled Clients: 0
```

show wireless tag rf

To display the details of wireless RF tag, use the **show wireless tag rf** command.

show wireless tag rf { **summary** | **detailed** } *rf-tag-name*

Syntax Description

summary Displays the summary of all RF tags.

detailed Displays details of an RF tag.

rf-tag-name RF tag name.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

Example

The following example shows the sample output of **show wireless tag rf summary** command:

```
Device# show wireless tag rf summary
```

```
Number of RF Tags: 1
```

```
RF tag name           Description
-----
default-rf-tag       default RF tag
```

show wireless urlfilter details

To view the details of a specified wireless URL filter, use the **show wireless urlfilter details** command.

show wireless urlfilter details *list-name*

Syntax Description	This command has no arguments.	
Command Default	None	
Command Modes	Global configuration	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

This example shows how to view the details of a specified wireless URL filter:

```
Device# show wireless urlfilter details urllist_flex_preauth
List Name..... : urllist_flex_preauth
Filter ID..... : 1
Filter Type..... : PRE-AUTH
Action..... : PERMIT
Redirect server ipv4..... : 8.8.8.8
Redirect server ipv6..... : 2001:0300:0008:0000:0000:0000:0000:0081
Configured List of URLs
  URL..... : url1.dns.com
```

show wireless urlfilter summary

To view the summary of all wireless URL filters, use the **show wireless urlfilter summary** command.

show wireless urlfilter summary

Syntax Description	This command has no arguments.	
Command Default	None	
Command Modes	Global configuration	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.10.1	This command was introduced.

This example shows how to view the summary of all wireless URL filters:

```
Device# show wireless urlfilter summary
Black-list      - DENY
White-list      - PERMIT
Filter-Type     - Specific to Local Mode

URL-List              ID  Filter-Type  Action  Redirect-ipv4  Redirect-ipv6
-----
urllist_flex_preauth  1   PRE-AUTH     PERMIT  8.8.8.8
2001:0300:0008:0000:0000:0000:0000:0081
```

show wireless vlan details

To see the VLAN details, use the **show wireless vlan details** command.

show wireless vlan details [**chassis** {*chassis-number* | **active** | **standby**} **R0**]

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the VLAN details:

```
Device# show wireless vlan details chassis active r0
```

show wireless wgb mac-address

To view all the clients of the wireless workgroup bridge (WGB) using its MAC address, use the **show wireless wgb mac-address** command.

show wireless wgb mac-address *mac-address* **detail**

Syntax Description

mac-address MAC address of the WGB.

detail View clients of the wireless WGB.

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the clients of the wireless WGB:

```
Device# show wireless wgb mac-address 98-C7-7B-09-EF-ED detail
```

show wireless wgb summary

To see the active workgroup bridges (WGB), use the **show wireless wgb summary** command.

show wireless wgb summary

Command Default

None

Command Modes

Privileged EXEC

Command History

Release	Modification
Cisco IOS XE Gibraltar 16.10.1	This command was introduced in a release earlier than Cisco IOS XE Gibraltar 16.10.1.

Examples

The following example shows how to see the active workgroup bridges (WGB):

```
Device# show wireless wgb summary
```

show wireless wps rogue ap summary

To display a list of all rogue access points detected by the device, use the **show wireless wps rogue ap summary** command.

show wireless wps rogue ap summary

Command Default None.

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

Usage Guidelines None.

This example shows how to display a list of all rogue access points detected by the device:

```
Device# show wireless wps rogue ap summary
```

```
Rogue Location Discovery Protocol      : Disabled
Rogue on wire Auto-Contain             : Disabled
Rogue using our SSID Auto-Contain     : Disabled
Valid client on rogue AP Auto-Contain : Disabled
Rogue AP timeout                       : 1200
Rogue Detection Report Interval       : 10
Rogue AP minimum RSSI                 : -128
Rogue AP minimum transient time       : 0
```

```
Number of rogue APs detected : 624
```

MAC Address	Classification	# APs	# Clients	Last Heard
0018.e78d.250a	Unclassified	1	0	Thu Jul 25 05:04:01 2013

0019.0705.d5bf	Unclassified	1	0	Thu Jul 25 05:16:26 2013

show wireless wps rogue client detailed

To view the detailed information of a specific rogue client, use the **show wireless wps rogue client detailed** *client-mac* command.

show wireless wps rogue client detailed *client-mac*

Syntax Description	<i>client-mac</i> MAC address of the rogue client.	
Command Default	None.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.
Usage Guidelines	None.	

This example shows how to display the detailed information for a specific rogue client:

```
Device# show wireless wps rogue client detail 0024.d7f1.2558
Rogue BSSID                : 64d8.146f.379f
Rogue Radio Type           : 802.11n - 5GHz
State                       : Alert
First Time Rogue was Reported : Wed Aug  7 12:51:43 2013
Last Time Rogue was Reported  : Wed Aug  7 12:51:43 2013
Reported by
  AP 2
    MAC Address              : 3cce.7309.0370
    Name                     : AP3502-talwar-ccie
    Radio Type               : 802.11a
    RSSI                     : -42 dBm
    SNR                      : 47 dB
    Channel                  : 52
    Last reported by this AP  : Wed Aug  7 12:51:43 2013
```

show wireless wps rogue ap detailed

To view the detailed information of a rogue access point, use **show wireless wps rogue ap detailed** *mac-address* command.

show wireless wps rogue ap detailed 0008.30a7.7797

Syntax Description	<i>mac-address</i> The MAC address of the rogue access point.
	Note If a rogue access point uses dot11n on 2.4GHz, the command output displays the radio type as dot11g , dot11n - 2.4 GHz .

Command Default None

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Fuji 16.7.x	This command was introduced.

Example

This example shows how to display the detailed information about a rogue access point:

```
Device# wireless wps rogue ap detailed 0008.30a7.7797
Rogue Event history

Rogue BSSID                               : 0008.30a7.7797

show wireless wps rogue client summary

To display summary of WPS rogue clients, use the **show wireless wps rogue client summary** command.

show wireless wps rogue client summary

Command Default None

Command Modes Privileged EXEC

Command History	Release	Modification
	Cisco IOS XE Gibraltar 16.12.1	This command was introduced.

Usage Guidelines

Example

The following displays the output of the **show wireless wps rogue client summary** command:

```
Device# show wireless wps rogue client summary
Validate rogue clients against AAA : Disabled
Validate rogue clients against MSE : Enabled
Number of rogue clients detected : 0
```
