### Information About Zero Wait Dynamic Frequency Selection

Access points (APs) monitor and perform Channel Availability Check (CAC) on a potential channel for 60 seconds when AP moves to Dynamic Frequency Selection (DFS) channels. Further, the AP ensures that there is no radar operating in the same frequency range before advertising beacons and serving clients. When the AP moves to a DFS, there is a service outage for a minute. This outage can be higher and extend up to 10 minutes. The Zero Wait Dynamic Frequency Selection feature helps to avoid the service outage in regulatory domains. As of now, U.S. and Europe are the only supported domains.

## **Configuring Zero Wait Dynamic Frequency Selection Globally** (CLI)

#### **Procedure**

	Command or Action	Purpose
Step 1	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 2	ap dot11 5ghz rrm channel zero-wait-dfs	Enables the Zero Wait Dynamic Frequency Selection feature. By default, the feature is disabled.
	Example:	
	<pre>Device(config)# ap dot11 5ghz rrm channel   zero-wait-dfs</pre>	Use the <b>no</b> form of this command to disable the feature.

Command or Action	Purpose	
	Note Tthe Zero Wait Dyr Frequency Selection only available on a	n feature is

# **Configuring Zero Wait Dynamic Frequency Selection Globally** (GUI)

#### **Procedure**

Step 1	Choose <b>Configuration</b> >	Radio Configurations > RRM.
--------	-------------------------------	-----------------------------

Step 2 In the RRM page, click the 5 GHz Band tab.

Step 3 Click the DCA tab.

**Step 4** Select the **Zero Wait DFS** check box to allow the AP to change to DFS without a service outage.

Step 5 Click Apply.

# **Enabling Zero Wait Dynamic Frequency Selection on a RF Profile** (CLI)

#### **Procedure**

	Command or Action	Purpose
Step 1	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 2	ap dot11 5ghz rf-profile profile-name	Configures a radio frequency (RF) profile and
	Example:	enters RF profile configuration mode.
	Device(config)# ap dot11 5ghz rf-profile test-dfs	
Step 3	channel zero-wait-dfs	Enables the Zero Wait Dynamic Frequency Selection feature for the RF profile.
	Example:	
	Device(config-rf-profile)# channel zero-wait-dfs	Use the <b>no</b> form of this command to disable the feature.

## **Enabling Zero Wait Dynamic Frequency Selection on a RF Profile** (GUI)

#### **Procedure**

Step 1	Choose Configuration > Tags & Profiles > RF/Radio.		
Step 2	In the <b>RF</b> tab, click <b>Add</b> .		
	The <b>Add RF Profile</b> page is displayed.		
Step 3	Enter the name for the RF profile.		
Step 4	From the Radio Band drop-down, choose the 5 GHz band.		
Step 5	Click the <b>RRM</b> tab.		
Step 6	Click the <b>DCA</b> tab.		
Step 7	Select the <b>Zero Wait DFS</b> check box to allow the AP to change to DFS without a service outage.		
Step 8	Click Apply to Device.		

## **Verifying Zero Wait Dynamic Frequency Selection Configuration**

Use the following commands to verify the DFS configuration.

To display the Zero Wait DFS configuration on an AP, use the following command:

```
Device# show ap name ap1 config slot 1 | inc Zero

Zero Wait DFS Parameters

Zero Wait DFS Capable : Yes

CAC Domain : None
```

To display the global configuration related to the Zero Wait Dynamic Frequency Selection feature, use the following command:

```
Device# show ap dot11 5ghz channel | inc Zero

Zero Wait DFS Parameters

Zero Wait DFS Capable : Yes

CAC Domain : None
```

To display the RF profile configuration related to the Zero Wait Dynamic Frequency Selection feature, use the following command:

```
Description :

RF Profile Name : test
Band : 5 GHz
Transmit Power Threshold v1 : -70 dBm
Min Transmit Power : -10 dBm
Max Transmit Power : 30 dBm
```

٠

Guard Interval : default Zero Wait DFS : Enabled
