Overview

This section explains how to configure on-premises flow data to be sent from Cisco Telemetry Broker (CTB) or Secure Network Analytics (formerly Stealthwatch) to Cisco Secure Cloud Analytics (formerly Stealthwatch Cloud).

We recommend using Cisco Telemetry Broker to send on-premise flow data to Secure Cloud Analytics. Alternatively, you can configure the Flow Collector to send flow data directly to Secure Cloud Analytics. For more information, review the [Flow Collector Resource Requirements](#).

Supported Flow Data Types

The following types of flow data are sent from Secure Network Analytics to Secure Cloud Analytics using Cisco Telemetry Broker or the Flow Collector:

- IPFIX packets
- NetFlow v5 (Cisco Telemetry Broker v1.3 or later)
- NetFlow v9 (Cisco Telemetry Broker v1.3 or later)

Network Visibility Module (NVM) data is not supported in Secure Cloud Analytics. If your Secure Network Analytics deployment ingests NVM data, we suggest using a dedicated flow-based telemetry Flow Collector to send on-premises flow data and using a separate Flow Collector to ingest NVM data.

Cisco Telemetry Broker Configuration

Use the following instructions to configure your Cisco Telemetry Broker to send on-premise flow data to Secure Cloud Analytics. We recommend using this method for environments with over 50,000 Flows per Second (FPS).

Prerequisites

- Secure Cloud Analytics account
- Cisco Telemetry Broker v1.2 or later

To deploy a Cisco Telemetry Broker, follow the instructions in the [Cisco Telemetry Broker Virtual Appliance Deployment and Configuration Guide](#).

Configure Cisco Telemetry Broker

1. Log in to your Secure Cloud Analytics web portal.
2. Click **Settings > Sensors**.
3. Scroll to the bottom of the page and save the Service key and Service host information.

Service key: [REDACTED]

Service host: `https://[REDACTED].obsrvbl.com`

4. Log in to Cisco Telemetry Broker.
5. In the upper right corner of the page, click **Add Destination > SCA Destination**.
6. Enter a destination **Name**.
7. Enter the **SCA Service Key**. Make sure that you paste the entire key.
8. Enter the **SCA Host URL**. Make sure that you paste the entire URL.
9. Click **Save**.
10. Go back to the Sensors page in the Secure Cloud Analytics portal. You should see the Telemetry Broker hostname and information included in the sensors list.

Settings ▾
Hostname: ctb
Heartbeat Received: ● 2022-07-31 12:40:30 UTC
Heartbeat Sent: 2022-07-31 12:40:33 UTC
Last Flow Record: ● 2022-06-22 10:47:42 UTC
[all sensor details >](#)

For more information on configuring Destinations, refer to the [Cisco Telemetry Broker User Guide](#).

Flow Collector Configuration

Use the following instructions to configure your Flow Collector to send on-premises flow data to Secure Cloud Analytics.

If you have configured Cisco Telemetry Broker to send on-premises flow data, you do not need to configure your Flow Collector. You only need to export flow data to Secure Cloud Analytics once per area of the network.

Prerequisites

- Secure Cloud Analytics account
- Secure Network Analytics Flow Collector v7.4.1

Resource Requirements

If sending on-premises flow data directly from your Flow Collector to Secure Cloud Analytics, we recommend the Flow Collector has the following allocated resources:

Flows per Second (FPS)	Required Reserved Memory	Required Reserved CPUs	Required Minimum Data Storage
Up to 300k	70 GB	8	200 GB

For environments with more than 300k FPS, we recommend configuring [Cisco Telemetry Broker](#) to send the on-premises flow data.

Enable Sending Flows to Secure Cloud Analytics

1. Log in to your Secure Cloud Analytics web portal.
2. Click **Settings > Sensors**.
3. Scroll to the bottom of the page and save the Service key and Service host information.

Service key:

Service host: `https://` `.obsrvbl.com`

4. Log in to your appliance console as **sysadmin**.
5. Select **Advanced**.
6. Select **Cloud: Send flows to Secure Cloud Analytics**.
7. Enter the Service Key and Service URL and click **OK**.
8. When prompted to confirm that you want to use these settings, click **Yes**.

You will receive a confirmation message stating that you have successfully save your Secure Cloud Analytics configuration.

Disable Sending Flows to Secure Cloud Analytics

To disable sending flows to Secure Cloud Analytics, complete the following steps:

1. Log in to your appliance console as **sysadmin**.
2. Select **Advanced**.
3. Select **Cloud: Send flows to Secure Cloud Analytics**.

The following screen opens.

4. Click **Delete Configuration**.
5. Click **OK**.
6. When prompted to confirm that you want to disable sending flows to Secure Cloud Analytics, click **Yes**.

You will receive a confirmation message stating that you have successfully disabled sending flows to Secure Cloud Analytics.

Configure Proxy

If your Flow Collector does not have a direct connection to the internet, you will need to configure Internet Proxy to reach Secure Cloud Analytics.

1. Log in to your Manager.
2. From the navigation menu, click the  (**Global Settings**) icon and select **Central Management**.
3. Click the  (**Ellipsis**) icon for your Flow Collector, then click **Edit Appliance Configuration**.
4. Click the **Network Service** tab, scroll to the Internet Proxy section.
5. Enter the IP address and Port information.

 For instructions on how to configure Internet Proxy, click the  (**User**) icon, then click **Help > Internet Proxy**. The IP Address, Port, and Proxy Login Credentials are specific to your network. Contact your Network Administrator for assistance.

6. Click **Apply Settings**.
7. Follow the on-screen prompts. The appliance reboots automatically.

Verification

Use the following instructions to verify Secure Cloud Analytics is receiving on-premises flow data.

i After configuration, you should be able to see flow records from Cisco Telemetry Broker or the Flow Collector in Secure Cloud Analytics within 30 minutes. If you do not, please contact [Cisco Support](#).

1. Log in to your Secure Cloud Analytics web portal.
2. Go to **Investigate > Event Viewer**.
3. Click the **Session Details** tab.
