# Secure Network Analytics Apps Version Compatibility Matrix

Before you install an app, review the [matrix](#) and confirm it is compatible with your installed version of Cisco Secure Network Analytics (formerly Stealthwatch). Although we strive for maximum app compatibility, not all versions of an app will be compatible with all versions of Secure Network Analytics. For more information, refer to the [App Compatibility Notice](#).

## Verify Installed Apps

To confirm the list of apps installed on your Secure Network Analytics system, complete the following steps:

1. Log in to your primary Manager.  
(In your browser address field, type https:// and the IP address of the virtual appliance. Press **Enter**.)
2. In the Web App, from the main menu, choose **Configure > Global > Central Management**.
3. Click the **App Manager** tab.

*The App Manager page opens. A list of installed apps are listed in the Apps table.*

## What's New

- **Cisco Security Analytics and Logging On Premises:**

**If you've updated Secure Network Analytics to v7.5.1**, we've moved Security Analytics and Logging (OnPrem) from a separate app to the core Secure Network Analytics. If you are updating Secure Network Analytics from v7.4.x or 7.5.0 to v7.5.1, you can uninstall the app after the update to v7.5.1 is completed. Refer to the [v7.5.1 Release Notes](#) for details.

Do not uninstall your existing app before completing the update to v7.5.1. If you uninstall it beforehand, all files associated with it, including your saved reports and temporary files, are deleted.

---

**If you've updated Secure Network Analytics to v7.4.2**, make sure you upgrade to Security Analytics and Logging (OnPrem) v3.2.0 through the App Manager after you've updated the system to v7.4.2. Previous versions of the app are not compatible with v7.4.2. If you don't upgrade, you won't be able to access Security Analytics and Logging (OnPrem). Refer to the [Release Notes](#) for details.

Do not uninstall the previous version of Security Analytics and Logging (OnPrem) or your existing data will be deleted.

- **Report Builder:** We moved Report Builder from a separate app to the core Secure Network Analytics in v7.4.0. If you have a previous version of the app installed, your app will be removed automatically as part of the update to Secure Network Analytics v7.4.0. Make sure you follow the instructions in the [Update Guide](#).

Do not uninstall your existing Report Builder app. If you uninstall Report Builder, all files associated with it, including your saved reports and temporary files, will be deleted.

- **Visibility Assessment:** We moved Visibility Assessment from a separate app to the core Secure Network Analytics in v7.2.1. We no longer release it as an optional app.

## App Compatibility Notice

To simplify the Cisco Secure Network Analytics customer experience, only one version of a Secure Network Analytics app will be available to install at any point in time (similar to the app store model). Although we strive for maximum app compatibility, not all versions of an app will be compatible with all versions of Secure Network Analytics.

Cisco reserves the right to discontinue a Secure Network Analytics app at any time. There may be many reasons for doing so, including but not limited to the following:

1. The equivalent capabilities provided by the app are now provided elsewhere, either via a new version of the app, a new app, or via a feature in Secure Network Analytics.
2. The capabilities provided by the app are no longer considered relevant or useful to our customer base.

If the decision is made to discontinue a Secure Network Analytics app, advance notice will be provided at least sixty days prior to the discontinuation date. Although Secure Network Analytics apps are currently included with your Secure Network Analytics license, Cisco reserves the right to charge license fees for certain Secure Network Analytics apps in the future.
