This product includes software developed by  
The Apache Software Foundation (<http://www.apache.org/>).

## TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of,

the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You

meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding

those notices that do not

pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions

for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate

comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

integer, given its low and high 32-bit\n * values as *signed* integers. See the from* functions below for more\n *
convenient ways of constructing Longs.\n * \n * The internal representation of a long is the two given signed, 32-bit
values.\n * \n * We use 32-bit pieces because these are the size of integers on which\n * Javascript performs bit-
operations. For operations like addition and\n * multiplication, we split each number into 16-bit pieces, which can
easily be\n * multiplied within Javascript's floating-point representation without overflow\n * or change in sign.\n
*\n * \n * In the algorithms below, we frequently reduce the negative case to the\n * positive case by negating the
input(s) and then post-processing the result.\n * \n * Note that we must ALWAYS check specially whether those
values are MIN_VALUE\n * (-2^63) because -MIN_VALUE == MIN_VALUE (since 2^63 cannot be represented
as\n * a positive number, it overflows back into a negative). Not handling this\n * case would often result in infinite
recursion.\n * \n * @param {number} low The low (signed) 32 bits of the long.\n * @param {number} high The
high (signed) 32 bits of the long.\n * @constructor\n * @final\n */\n\nKotlin.Long = function(low, high) {\n  /**\n

If any two elements would have the same key returned by [keySelector] the last one gets added to the map.

```
@sample samples.collections.Arrays.Transformations.associateArrayOfPrimitivesByTo
public inline fun <K, M : MutableMap<in K, in Boolean>> BooleanArray.associateByTo(destination: M,
keySelector: (Boolean) -> K): M {
    for (element in this) {
        destination.put(keySelector(element), element)
    }
    return destination
}
```

Populates and returns the [destination] mutable map with key-value pairs, where key is provided by the [keySelector] function applied to each element of the given array and value is the element itself. If any two elements would have the same key returned by [keySelector] the last one gets added to the map.

```
@sample samples.collections.Arrays.Transformations.associateArrayOfPrimitivesByTo
public inline fun <K, M : MutableMap<in K, in Char>> CharArray.associateByTo(destination: M, keySelector:
(Char) -> K): M {
    for (element in this) {
        destination.put(keySelector(element), element)
    }
    return destination
}
```

Populates and returns the [destination] mutable map with key-value pairs, where key is provided by the [keySelector] function and value is provided by the [valueTransform] function applied to elements of the given array. If any two elements would have the same key returned by [keySelector] the last one gets added to the map.

```
@sample
samples.collections.Arrays.Transformations.associateArrayOfPrimitivesByToWithValueTransform
public inline fun <T, K, V, M : MutableMap<in K, in V>> Array<out T>.associateByTo(destination: M, keySelector: (T) -
> K, valueTransform: (T) -> V): M {
    for (element in this) {
        destination.put(keySelector(element),
valueTransform(element))
    }
    return destination
}
```

Populates and returns the [destination] mutable map with key-value pairs, where key is provided by the [keySelector] function and value is provided by the [valueTransform] function applied to elements of the given array. If any two elements would have the same key returned by [keySelector] the last one gets added to the map.

```
@sample

Sequence<T> {\n    require(n >= 0) { "Requested element count $n is less than

```

```

}
}

Returns a sequence containing first elements satisfying the given [predicate].
The operation is _intermediate_ and _stateless_.

@sample samples.collections.Collections.Transformations.take
public fun <T>
Sequence<T>.takeWhile(predicate: (T) -> Boolean): Sequence<T> {
    return TakeWhileSequence(this,
predicate)
}

Returns a sequence that yields elements of this sequence sorted according to their natural
sort order.
The sort is _stable_. It means that equal elements preserve their order relative to each other after
sorting.
The operation is _intermediate_ and _stateful_.
public fun <T : Comparable<T>>
Sequence<T>.sorted(): Sequence<T> {
    return object : Sequence<T> {
        override fun iterator(): Iterator<T> {
            val sortedList = this@sorted.toMutableList()
            sortedList.sort()
            return
sortedList.iterator()
        }
    }
}

Returns a sequence that yields elements of this sequence sorted
according to natural sort order of the value returned by specified [selector] function.
The sort is _stable_.
It means that equal elements preserve their order relative to each other after sorting.
The operation is
_intermediate_ and _stateful_.
public inline fun <T, R : Comparable<R>> Sequence<T>.sortedBy(crossinline
selector: (T) -> R?): Sequence<T> {
    return sortedWith(compareBy(selector))
}

Returns a sequence
that yields elements of this sequence sorted descending according to natural sort order of the value returned by
specified [selector] function.
The sort is _stable_. It means that equal elements preserve their order relative
to each other after sorting.
The operation is _intermediate_ and _stateful_.
public inline fun <T, R :
Comparable<R>> Sequence<T>.sortedByDescending(crossinline selector: (T) -> R?): Sequence<T> {
    return
sortedWith(compareByDescending(selector))
}

Returns a sequence that yields elements of this sequence
sorted descending according to their natural sort order.
The sort is _stable_. It means
that equal elements preserve their order relative to each other after sorting.
The operation is _intermediate_
and _stateful_.
public fun <T : Comparable<T>> Sequence<T>.sortedDescending(): Sequence<T> {
    return sortedWith(reverseOrder())
}

Returns a sequence that yields elements of this sequence sorted
according to the specified [comparator].
The sort is _stable_. It means that equal elements preserve their
order relative to each other after sorting.
The operation is _intermediate_ and _stateful_.
public fun
<T> Sequence<T>.sortedWith(comparator: Comparator<in T>): Sequence<T> {
    return object : Sequence<T> {
        override fun iterator(): Iterator<T> {
            val sortedList = this@sortedWith.toMutableList()
            sortedList.sortWith(comparator)
            return sortedList.iterator()
        }
    }
}

Returns a [Map]
containing key-value pairs provided by [transform] function
applied to
elements of the given sequence.
If any of two pairs would have the same key the last one gets added to the
map.
The returned map preserves the entry iteration order of the original sequence.
The operation is
_terminal_.
@sample samples.collections.Collections.Transformations.associate
public inline fun <T,
K, V> Sequence<T>.associate(transform: (T) -> Pair<K, V>): Map<K, V> {
    return
associateTo(LinkedHashMap<K, V>(), transform)
}

Returns a [Map] containing the elements from the
given sequence indexed by the key
returned from [keySelector] function applied to each element.
If any two elements would have the same key returned by [keySelector] the last one gets added to the map.
The
returned map preserves the entry iteration order of the original sequence.
The operation is _terminal_.
@sample
samples.collections.Collections.Transformations.associateBy
public inline fun <T, K>
Sequence<T>.associateBy(keySelector:
(T) -> K): Map<K, T> {
    return associateByTo(LinkedHashMap<K, T>(), keySelector)
}

Returns a
[Map] containing the values provided by [valueTransform] and indexed by [keySelector] functions applied to
elements of the given sequence.
If any two elements would have the same key returned by [keySelector] the
last one gets added to the map.
The returned map preserves the entry iteration order of the original
sequence.
The operation is _terminal_.
@sample
samples.collections.Collections.Transformations.associateByWithValueTransform
public inline fun <T, K, V>
Sequence<T>.associateBy(keySelector: (T) -> K, valueTransform: (T) -> V): Map<K, V> {
    return
associateByTo(LinkedHashMap<K, V>(), keySelector, valueTransform)
}

Populates and returns the
[destination] mutable map with key-value pairs,
where key is provided by the [keySelector] function applied to

```

each element of the given sequence

and value is the element itself

If any two elements would have the same key returned by [keySelector] the last one gets added to the map.

The operation is `_terminal_`

`@sample`

```
samples.collections.Collections.Transformations.associateByTo
```

`*/`  
`public inline fun <T, K, M : MutableMap<in K, in T>> Sequence<T>.associateByTo(destination: M, keySelector: (T) -> K): M {`  
 for (element in this) {  
 destination.put(keySelector(element), element)  
 }  
 return destination  
`}`  
`*/`  
 Populates and returns the [destination] mutable map with key-value pairs, where key is provided by the [keySelector] function and value is provided by the [valueTransform] function applied to elements of the given sequence.

If any two elements would have the same key returned by [keySelector] the last one gets added to the map.

The operation is `_terminal_`

`@sample`

```
samples.collections.Collections.Transformations.associateByToWithValueTransform
```

`*/`  
`public inline fun <T, K, V, M : MutableMap<in K, in V>> Sequence<T>.associateByTo(destination: M, keySelector: (T) -> K, valueTransform: (T) -> V): M {`  
 for (element in this) {  
 destination.put(keySelector(element), valueTransform(element))  
 }  
 return destination  
`}`  
`*/`  
 Populates and returns the [destination] mutable map with key-value pairs provided by [transform] function applied to each element of the given sequence.

If any of two pairs would have the same key the last one gets added to the map.

The operation is `_terminal_`

`@sample`

```
samples.collections.Collections.Transformations.associateTo
```

`*/`  
`public inline fun <T, K, V, M : MutableMap<in K, in V>> Sequence<T>.associateTo(destination: M, transform: (T) -> Pair<K, V>): M {`  
 for (element in this) {  
 destination += transform(element)  
 }  
 return destination  
`}`  
`*/`  
 Returns a [Map] where keys are elements from the given sequence and values are produced by the [valueSelector] function applied to each element.

If any two elements are equal, the last one gets added to the map.

The returned map preserves the entry iteration order of the original sequence.

The operation is `_terminal_`

`@sample`

```
samples.collections.Collections.Transformations.associateWith
```

`*/`  
`@SinceKotlin("1.3")`  
`public inline fun <K, V> Sequence<K>.associateWith(valueSelector: (K) -> V): Map<K, V> {`  
 val result = LinkedHashMap<K, V>()  
 return associateWithTo(result, valueSelector)  
`}`  
`*/`  
 Populates and returns the [destination] mutable map with key-value pairs for each element of the given sequence, where key is the element itself and value is provided by the [valueSelector] function applied to that key.

If any two elements are equal, the last one overwrites the former value in the map.

The operation is `_terminal_`

`@sample`

```
samples.collections.Collections.Transformations.associateWithTo
```

`*/`  
`@SinceKotlin("1.3")`  
`public inline fun <K, V, M : MutableMap<in K, in V>> Sequence<K>.associateWithTo(destination: M, valueSelector: (K) -> V): M {`  
 for (element in this) {  
 destination.put(element, valueSelector(element))  
 }  
 return destination  
`}`  
`*/`  
 Appends all elements to the given [destination] collection.

The operation is `_terminal_`

`*/`  
`public fun <T, C : MutableCollection<in T>> Sequence<T>.toCollection(destination: C): C {`  
 for (item in this) {  
 destination.add(item)  
 }  
 return destination  
`}`  
`*/`  
 Returns a [HashSet] of all elements.

The operation is `_terminal_`

`*/`  
`public fun <T> Sequence<T>.toHashSet(): HashSet<T> {`  
 return toCollection(HashSet<T>())  
`}`  
`*/`  
 Returns a [List] containing all elements.

The operation is `_terminal_`

`*/`  
`public fun <T> Sequence<T>.toList(): List<T> {`  
 return this.toMutableList().optimizeReadOnlyList()  
`}`  
`*/`  
 Returns a [MutableList] filled with all elements of this sequence.

The operation is `_terminal_`

`*/`  
`public fun <T> Sequence<T>.toMutableList(): MutableList<T> {`  
 return toCollection(ArrayList<T>())  
`}`  
`*/`  
 Returns a [Set] of all elements.

The returned set preserves the element iteration order of the original sequence.

The operation is `_terminal_`

`*/`  
`public fun <T> Sequence<T>.toSet(): Set<T> {`  
 return toCollection(LinkedHashSet<T>()).optimizeReadOnlySet()  
`}`  
`*/`  
 Returns a single sequence of all elements from results of [transform] function being invoked on each element of original sequence.

The operation is `_intermediate_` and `_stateless_`

`@sample`

```
samples.collections.Collections.Transformations.flatMap
```

    var accumulator: S = iterator.next()
    while (iterator.hasNext()) {
        accumulator = operation(checkIndexOverflow(index++), accumulator, iterator.next())
    }
    return accumulator
}

```

Accumulates value starting with the first element and applying [operation] from left to right to current accumulator value and each element. Returns null if the sequence is empty.

The operation is `_terminal_`.

`@sample samples.collections.Collections.Aggregates.reduceOrNull`

```

@SinceKotlin("1.3")
@ExperimentalStdlibApi
public inline fun <S, T : S> Sequence<T>.reduceOrNull(operation: (acc: S, T) -> S?): S? {
    val iterator = this.iterator()
    if (!iterator.hasNext()) return null
    var accumulator: S = iterator.next()
    while (iterator.hasNext()) {
        accumulator = operation(accumulator, iterator.next())
    }
    return accumulator
}

```

Returns a sequence containing successive accumulation values generated by applying [operation] from left to right to each element and current accumulator value that starts with [initial] value.

Note that ``acc`` value passed to [operation] function should not be mutated; otherwise it would affect the previous value in resulting sequence.

The [initial] value should also be immutable (or should not be mutated) as it may be passed to [operation] function later because of sequence's lazy nature.

`@param [operation]` function that takes current accumulator value and an element, and calculates the next accumulator value.

The operation is `_intermediate_` and `_stateless_`.

`@sample samples.collections.Collections.Aggregates.scan`

```

@SinceKotlin("1.3")
@ExperimentalStdlibApi
public fun <T, R> Sequence<T>.scan(initial: R, operation: (acc: R, T) -> R): Sequence<R> {
    return sequence {
        yield(initial)
        var accumulator = initial
        for (element in this@scan) {
            accumulator = operation(accumulator, element)
            yield(accumulator)
        }
    }
}

```

Returns a sequence containing successive accumulation values generated by applying [operation] from left to right to each element, its index in the original sequence and current accumulator value that starts with [initial] value.

Note that ``acc`` value passed to [operation] function should not be mutated; otherwise it would affect the previous value in resulting sequence.

The [initial] value should also be immutable (or should not be mutated) as it may be passed to [operation] function later because of sequence's lazy nature.

`@param [operation]` function that takes the index of an element, current accumulator value and the element itself, and calculates the next accumulator value.

The operation is `_intermediate_` and `_stateless_`.

`@sample samples.collections.Collections.Aggregates.scanIndexed`

```

@SinceKotlin("1.3")
@ExperimentalStdlibApi

samples.collections.Collections.Transformations.joinTo
public fun <T, A : Appendable>
Sequence<T>.joinTo(buffer: A, separator: CharSequence = "\", \", prefix: CharSequence = "\"", postfix:
CharSequence = "\"", limit: Int = -1, truncated: CharSequence = "...", transform: ((T) -> CharSequence)? = null): A
{
    buffer.append(prefix)
    var count = 0
    for (element in this) {
        if (++count > 1)
            buffer.append(separator)
        if (limit < 0 || count <= limit) {
            buffer.appendElement(element, transform)
        } else break
    }
    if (limit >= 0 && count > limit) buffer.append(truncated)
    buffer.append(postfix)
    return buffer
}

Creates a string from all the elements separated using [separator] and using the given
[prefix] and [postfix] if supplied.
If the collection could be huge, you can specify a non-negative value of
[limit], in
which case only the first [limit]
elements will be appended, followed by the [truncated] string (which defaults to
"...").
The operation is _terminal_.
@sample
samples.collections.Collections.Transformations.joinToString
public fun <T>
Sequence<T>.joinToString(separator: CharSequence = "\", \", prefix: CharSequence = "\"", postfix: CharSequence =
\"", limit: Int = -1, truncated: CharSequence = "...", transform: ((T) -> CharSequence)? = null): String {
    return
    joinTo(StringBuilder(), separator, prefix, postfix, limit, truncated, transform).toString()
}

Creates an
[Iterable] instance that wraps the original sequence returning its elements when being iterated.
public fun <T>
Sequence<T>.asIterable(): Iterable<T> {
    return Iterable { this.iterator() }
}

Returns this sequence as
a [Sequence].
@kotlin.internal.InlineOnly
public inline fun <T> Sequence<T>.asSequence(): Sequence<T>
{
    return this
}

Returns
an average value of elements in the sequence.
The operation is _terminal_.
@kotlin.jvm.JvmName("averageOfByte")
public fun Sequence<Byte>.average(): Double {
    var sum:
    Double = 0.0
    var count: Int = 0
    for (element in this) {
        sum += element
        checkCountOverflow(++count)
    }
    return if (count == 0) Double.NaN else sum / count
}

Returns
an average value of elements in the sequence.
The operation is _terminal_.
@kotlin.jvm.JvmName("averageOfShort")
public fun Sequence<Short>.average(): Double {
    var sum:
    Double = 0.0
    var count: Int = 0
    for (element in this) {
        sum += element
        checkCountOverflow(++count)
    }
    return if (count == 0) Double.NaN else sum / count
}

Returns
an average value of elements in the sequence.
The operation is _terminal_.
@kotlin.jvm.JvmName("averageOfInt")
public fun Sequence<Int>.average(): Double {
    var sum: Double
    = 0.0
    var count: Int = 0
    for (element in this) {
        sum += element
        checkCountOverflow(++count)
    }
    return if (count == 0) Double.NaN else sum / count
}

Returns
an average value of elements in the sequence.
The operation is _terminal_.
@kotlin.jvm.JvmName("averageOfLong")
public fun Sequence<Long>.average(): Double {
    var sum:
    Double = 0.0
    var count: Int = 0
    for (element in this) {
        sum += element
        checkCountOverflow(++count)
    }
    return if (count == 0) Double.NaN else sum / count
}

Returns
an average value of elements in the sequence.
The operation is _terminal_.
@kotlin.jvm.JvmName("averageOfFloat")
public fun Sequence<Float>.average(): Double {
    var sum:
    Double = 0.0
    var count: Int = 0
    for (element in this) {
        sum += element
        checkCountOverflow(++count)
    }
    return if (count == 0) Double.NaN else sum / count
}

```

{ substring(it) }
}

Splits this char sequence to a list of strings around occurrences of the specified
[delimiters].

@param delimiters One or more strings to be used as delimiters.
@param ignoreCase `true` to ignore character case when matching a delimiter. By default `false`.
@param limit The maximum number of substrings to return. Zero by default means no limit is set.
To avoid ambiguous results when strings in
[delimiters] have characters in common, this method proceeds from
the beginning to
the end of this string, and matches at each position the first element in [delimiters]
that is equal to a delimiter in
this instance at that position.

public fun CharSequence.split(vararg delimiters: String, ignoreCase: Boolean =
false, limit: Int = 0): List<String> {
    if (delimiters.size == 1) {
        val delimiter = delimiters[0]
        if (!delimiter.isEmpty()) {
            return split(delimiter, ignoreCase, limit)
        }
    }
    return
rangesDelimitedBy(delimiters, ignoreCase = ignoreCase, limit = limit).asIterable().map { substring(it) }
}

Splits this char sequence to a sequence of strings around occurrences of the specified [delimiters].
@param delimiters One or more characters to be used as delimiters.
@param ignoreCase `true` to ignore character case when matching a delimiter. By default `false`.
@param limit The maximum number of substrings to return.

public fun CharSequence.splitToSequence(vararg delimiters: Char,
ignoreCase: Boolean = false, limit: Int = 0): Sequence<String> =
rangesDelimitedBy(delimiters, ignoreCase =
ignoreCase, limit = limit).map { substring(it) }
}

Splits this char sequence to a list of strings around
occurrences of the specified [delimiters].
@param delimiters One or more characters to be used as
delimiters.
@param ignoreCase `true` to ignore character case when matching a delimiter. By default `false`.
@param limit The maximum number of substrings to return.

public fun CharSequence.split(vararg delimiters:
Char, ignoreCase: Boolean = false, limit: Int = 0): List<String> {
    if (delimiters.size == 1) {
        return
split(delimiters[0].toString(), ignoreCase, limit)
    }
    return rangesDelimitedBy(delimiters, ignoreCase =
ignoreCase, limit = limit).asIterable().map { substring(it) }
}

Splits this char sequence to a list of strings
around occurrences of the specified [delimiter].
This is specialized version
of split which receives single non-empty delimiter and offers better performance.
@param delimiter String
used as delimiter.
@param ignoreCase `true` to ignore character case when matching a delimiter. By default
`false`.
@param limit The maximum number of substrings to return.

private fun
CharSequence.split(delimiter: String, ignoreCase: Boolean, limit: Int): List<String> {
    require(limit >= 0, {
        "Limit must be non-negative, but was $limit."
    })
    var currentOffset = 0
    var nextIndex =

== limit - 1) break
        nextIndex = indexOf(delimiter, currentOffset, ignoreCase)
    } while (nextIndex != -
1)
    result.add(substring(currentOffset, length))
    return result
}

Splits this char sequence around
matches of the given regular expression.
@param limit Non-negative value specifying the maximum number
of substrings to return.
Zero by default means no limit is set.

@kotlin.internal.InlineOnly
public inline
fun CharSequence.split(regex: Regex, limit: Int = 0): List<String> = regex.split(this, limit)

Splits this
char sequence to a sequence of lines delimited by any of the following character sequences: CRLF, LF or CR.
The lines returned do not include terminating line separators.

public fun CharSequence.lineSequence():
Sequence<String> = splitToSequence("\\r\\n", "\\n", "\\r")

Splits this char sequence to a list of lines
delimited by any of the following character sequences: CRLF, LF or
CR.
The lines returned do not include terminating line separators.

public fun CharSequence.lines():
List<String> = lineSequence().toList()

*\n * Represents a type. Type is usually either a class with optional type arguments,\n *\n * or a type parameter of some
declaration, plus nullability.\n *\n * @public interface KType : KAnnotatedElement {\n\n /**\n *\n * The declaration of
the classifier used
in this type.\n *\n * For example, in the type `List<String>` the classifier would be the [KClass] instance for [List].\n\n
*\n *\n * Returns `null` if this type is not denotable in Kotlin, for example if it is an intersection type.\n *\n *
@SinceKotlin("1.1")\n\n public val classifier: KClassifier?\n\n /**\n *\n * Type arguments passed for the

```

parameters of the classifier in this type. For example, in the type `Array<out Number>` the only type argument is `out Number`.

In case this type is based on an inner class, the returned list contains the type arguments provided for the innermost class first, then its outer class, and so on. For example, in the type `Outer<A, B>.Inner<C, D>` the returned list is `[C, D, A, B]`.

```
@SinceKotlin("1.1")
public val arguments: List<KTypeProjection>
/** true if this type was marked nullable in the source code.
 * For Kotlin types, it means that `null` value is allowed to be represented by this type.
 * In practice it means that the type was declared with a question mark at the end.
 * For non-Kotlin types, it means the type or the symbol which was declared with this type is annotated with a runtime-retained nullability annotation such as [javax.annotation.Nullable].
 * Note that even if [isMarkedNullable] is false, values of the type can still be `null`.
 * This may happen if it is a type of the type parameter with a nullable upper bound:
 * fun <T> foo(t: T) {
 * // isMarkedNullable == false for t's type, but t can be null here when T = `Any?`
 * }
 * public val isMarkedNullable: Boolean
 */
 * Represents a type projection. Type projection is usually the argument to another type in a type usage.
 * For example, in the type `Array<out Number>`, `out Number` is the covariant projection of the type represented by the class `Number`.
 * Type projection is either the star projection, or an entity consisting of a specific type plus optional variance.
 * See the [Kotlin language documentation](https://kotlinlang.org/docs/reference/generics.html#type-projections) for more information.

```

used as receivers for extension `suspend` functions. These `suspend` extensions can only invoke other member or extension `suspend` functions on this particular receiver and are restricted from calling arbitrary suspension functions.

```
@SinceKotlin("1.3")@Target(AnnotationTarget.CLASS)@Retention(AnnotationRetention.BINARY)public annotation class RestrictsSuspension
```

Resumes the execution of the corresponding coroutine passing [value] as the return value of the last suspension point.

```
@SinceKotlin("1.3")@InlineOnlypublic inline fun <T> Continuation<T>.resume(value: T): Unit = resumeWith(Result.success(value))
```

Resumes the execution of the corresponding coroutine so that the [exception] is re-thrown right after the last suspension point.

```
@SinceKotlin("1.3")@InlineOnlypublic inline fun <T> Continuation<T>.resumeWithException(exception: Throwable): Unit =
```

```
resumeWith(Result.failure(exception))
```

Creates a [Continuation] instance with the given [context] and implementation of [resumeWith] method.

```
@SinceKotlin("1.3")@InlineOnlypublic inline fun <T> Continuation(context: CoroutineContext, crossinline resumeWith: (Result<T>) -> Unit): Continuation<T> = object : Continuation<T> { override val context: CoroutineContext get() = context override fun
```

```
resumeWith(result: Result<T>) = resumeWith(result) }
```

Creates a coroutine without a receiver and with result type [T]. This function creates a new, fresh instance of suspendable computation every time it is invoked. To start executing the created coroutine, invoke `resume(Unit)` on the returned [Continuation] instance. The [completion] continuation is invoked when the coroutine completes with a result or an exception. Subsequent invocation of any resume function on the resulting continuation will produce an [IllegalStateException].

```
@SinceKotlin("1.3")@Suppress("UNCHECKED_CAST")public fun <T> (suspend () -> T).createCoroutine(completion: Continuation<T>): Continuation<Unit> = SafeContinuation(createCoroutineUnintercepted(completion).intercepted(), COROUTINE_SUSPENDED)
```

Creates a coroutine with receiver type [R] and result type [T]. This function creates a new, fresh instance of suspendable computation every time it is invoked. To start executing the created coroutine, invoke `resume(Unit)` on the returned [Continuation] instance. The [completion] continuation is invoked when the coroutine completes with a result or an exception. Subsequent invocation of any resume function on the resulting continuation will produce an [IllegalStateException].

```
@SinceKotlin("1.3")@Suppress("UNCHECKED_CAST")public fun <R, T> (suspend R.() -> T).createCoroutine(receiver: R, completion: Continuation<T>): Continuation<Unit> = SafeContinuation(createCoroutineUnintercepted(receiver, completion).intercepted(), COROUTINE_SUSPENDED)
```

Starts a coroutine without a receiver and with result type [T]. This function creates and starts a new, fresh instance of suspendable computation every time it is invoked. The [completion] continuation is invoked when the coroutine completes with a result or an exception.

```
@SinceKotlin("1.3")@Suppress("UNCHECKED_CAST")public fun <T> (suspend () -> T).startCoroutine(completion: Continuation<T>) { createCoroutineUnintercepted(completion).intercepted().resume(Unit) }
```

Starts a coroutine with receiver type [R] and result type [T]. This function creates and starts a new, fresh instance of suspendable computation every time it is invoked. The [completion] continuation is invoked when the coroutine completes with a result or an exception.

```
@SinceKotlin("1.3")@Suppress("UNCHECKED_CAST")public fun <R, T> (suspend R.() -> T).startCoroutine(receiver: R, completion: Continuation<T>) { createCoroutineUnintercepted(receiver, completion).intercepted().resume(Unit) }
```

Obtains the current continuation instance inside suspend functions and suspends the currently running coroutine. In this function both [Continuation.resume] and [Continuation.resumeWithException] can be used either synchronously in the same stack-frame

where the suspension function is run or asynchronously later in the same thread or from a different thread of execution. Subsequent invocation of any resume function will produce an [IllegalStateException].

/**
 * Gives a declaration (a function, a property or a class) specific name in JavaScript.
 * This may be useful in the following cases:
 * * There are two functions for which the compiler gives same name in JavaScript, you can mark one with `@JsName(...)` to prevent the compiler from reporting error.
 * * You are writing a JavaScript library in Kotlin. The compiler produces mangled names for functions with parameters, which is unnatural for usual JavaScript developer. You can put `@JsName(...)` on functions you want to be available from JavaScript.
 * * For some reason you want to rename declaration, e.g. there's common term in JavaScript for a concept provided by the declaration, which is uncommon in Kotlin.
 * Example:
 * ```
 * kotlin
 * class Person(val name: String) {
 *     fun hello() {
 *         println("Hello $name!")
 *     }
 * }
 * ```
 */

```

```

@JsName("helloWithGreeting") fun hello(greeting: String) {
    println("$greeting $name!")
}

```

It's required to denote a valid JavaScript identifier.

```

@Retention(AnnotationRetention.BINARY)
@Target(CLASS, FUNCTION, PROPERTY, CONSTRUCTOR, PROPERTY_GETTER, PROPERTY_SETTER)
public actual annotation class JsName(actual val name: String)

```

Denotes an `external` declaration that must be imported from native JavaScript library.

The compiler produces the code relevant for the target module system, for example, in case of CommonJS, it will import the declaration via the `require(...)` function.

The annotation can be used on top-level external declarations (classes, properties, functions) and files.

In case of file (which can't be `external`) the following rule applies: all the declarations in the file must be `external`. By applying `@JsModule(...)` on a file you tell the compiler to import a JavaScript object that contain all the declarations from the file.

Example:

```

kotlin
@JsModule("jquery") external abstract class JQuery() {
    // some declarations here
}
@JsModule("jquery") external fun JQuery(element: Element): JQuery

```

It is not interpreted by the Kotlin compiler, it's passed as is directly to the target module system.

```

@Retention(AnnotationRetention.BINARY)
@Target(CLASS, PROPERTY, FUNCTION, FILE)
public annotation class JsModule(val import: String)

```

Denotes an `external` declaration that can be used without module system.

By default, an `external` declaration is available regardless your target module system.

However, by applying [JsModule] annotation you can make a declaration unavailable to plain module system.

Some JavaScript libraries are distributed both as a standalone downloadable piece of JavaScript and as a module available as an npm package.

To tell the Kotlin compiler to accept both cases, you can augment [JsModule] with the `@JsNonModule` annotation.

For example:

```

kotlin
@JsModule("jquery")
@JsNonModule
@JsName("$") external abstract class JQuery() {
    // some declarations here
}
@JsModule("jquery")
@JsNonModule
@JsName("$") external fun JQuery(element: Element): JQuery

```

Adds prefix to `external` declarations in a source file.

JavaScript does not have concept of packages (namespaces). They are usually emulated by nested objects.

The compiler turns references to `external` declarations either to plain unprefix names (in case of plain modules) or to plain imports.

However, if a JavaScript library provides its declarations in packages, you won't be satisfied with this.

You can tell the compiler to generate additional prefix before references to `external` declarations using the `@JsQualifier(...)` annotation.

Note that a file marked with the `@JsQualifier(...)` annotation can't contain non-`external` declarations.

Example:

```

@file:JsQualifier("my.jsPackageName") package some.kotlinPackage
external fun foo(x: Int)
external fun bar(): String

```

The qualifier to add to the declarations in the generated code.

It must be a sequence of valid JavaScript identifiers separated by the `.` character.

Examples of valid qualifiers are: `foo`, `bar.Baz`, `\_.\$.f`.

```

@Retention(AnnotationRetention.BINARY)
@Target(AnnotationTarget.FILE)
public annotation class JsQualifier(val value: String)

```

Marks experimental JS export annotations.

Note that behaviour of these annotations will likely be changed in the future.

Usages of such annotations will be reported as warnings unless an explicit opt-in with the [OptIn] annotation, e.g. `@OptIn(ExperimentalJsExport::class)`, or with the `-Xopt-in=kotlin.js.ExperimentalJsExport` compiler option is given.

```

@Suppress("DEPRECATION")
@Experimental(level = Experimental.Level.WARNING)
@RequiresOptIn(level = RequiresOptIn.Level.WARNING)
@SinceKotlin("1.3")
public annotation class ExperimentalJsExport

```

Exports top-level declaration.

Used in future IR-based backend.

Has no effect in current JS backend.

```

towards positive infinity.\n * @return the smallest Float value that is greater than or equal to the given

```

value [x] and is a mathematical integer.

`ceil(x)` is `x` where `x` is `NaN` or `+Inf` or `-Inf` or already a mathematical integer.

```

@SinceKotlin("1.2")
@InlineOnly
public actual inline fun ceil(x: Float): Float = nativeMath.ceil(x.toDouble()).toFloat()

```

Rounds the given value [x] to an integer towards negative infinity.

@return the largest Float value that is smaller than or equal to the given value [x] and is a mathematical integer.

`floor(x)` is `x` where `x` is `NaN` or `+Inf` or `-Inf` or already a mathematical integer.

```

@SinceKotlin("1.2")
@InlineOnly
public actual inline fun floor(x: Float): Float = nativeMath.floor(x.toDouble()).toFloat()

```

Rounds the given value [x] to an integer towards zero.

@return the value [x] having its fractional part truncated.

`truncate(x)` is `x` where `x` is `NaN` or `+Inf` or `-Inf` or already a mathematical integer.

```

@SinceKotlin("1.2")
@InlineOnly
public actual inline fun truncate(x: Float): Float = truncate(x.toDouble()).toFloat()

```

Rounds the given value [x] towards the closest integer with ties rounded towards even integer.

`round(x)` is `x` where `x` is `NaN` or `+Inf` or `-Inf` or already a mathematical integer.

```

@SinceKotlin("1.2")
@InlineOnly
public actual inline fun round(x: Float): Float = round(x.toDouble()).toFloat()

```

Returns the absolute value of the given value [x].

`abs(NaN)` is `NaN`

@see `absoluteValue` extension property for [Float]

```

@SinceKotlin("1.2")
@InlineOnly
public actual inline fun abs(x: Float): Float = nativeMath.abs(x.toDouble()).toFloat()

```

Returns the sign of the given value [x]:

- 1.0 if the value is negative,
- zero if the value is zero,
- 1.0 if the value is positive

`sign(NaN)` is `NaN`

```

@SinceKotlin("1.2")
@InlineOnly
public actual inline fun sign(x: Float): Float = nativeMath.sign(x.toDouble()).toFloat()

```

Returns the smaller of two values.

If either value is `NaN`, then the result is `NaN`.

```

@SinceKotlin("1.2")
@InlineOnly
public actual inline fun min(a: Float, b: Float): Float = nativeMath.min(a, b)

```

Returns the greater of two values.

If either value is `NaN`, then the result is `NaN`.

```

@SinceKotlin("1.2")
@InlineOnly
public actual inline fun max(a: Float, b: Float): Float = nativeMath.max(a, b)

```

// extensions

Raises this value to the power [x].

Special cases:

- `b.pow(0.0)` is `1.0`
- `b.pow(1.0) == b`
- `b.pow(NaN)` is `NaN`
- `NaN.pow(x)` is `NaN` for `x != 0.0`
- `b.pow(Inf)` is `NaN` for `abs(b) == 1.0`
- `b.pow(x)` is `NaN` for `b < 0` and `x` is finite and not an integer

```

@SinceKotlin("1.2")
@InlineOnly
public actual inline fun Float.pow(x: Float): Float = nativeMath.pow(this.toDouble(), x.toDouble()).toFloat()

```

Raises this value to the integer power [n].

See the other overload of [pow] for details.

```

@SinceKotlin("1.2")
@InlineOnly
public actual inline fun Float.pow(n: Int): Float = nativeMath.pow(this.toDouble(), n.toDouble()).toFloat()

```

Returns the absolute value of this value.

Special cases:

- `NaN.absoluteValue` is `NaN`

@see `abs` function

```

@SinceKotlin("1.2")
@InlineOnly
public actual inline val Float.absoluteValue: Float get() = nativeMath.abs(this.toDouble()).toFloat()

```

Returns the sign of this value:

- 1.0 if the value is negative,
- zero if the value is zero,
- 1.0 if the value is positive

Special case:

- `NaN.sign` is `NaN`

```

@SinceKotlin("1.2")
@InlineOnly
public actual inline val Float.sign: Float get() = nativeMath.sign(this.toDouble()).toFloat()

```

Returns this value with the sign bit same as of the [sign] value.

If [sign] is `NaN` the sign of the result is undefined.

```

@SinceKotlin("1.2")
@InlineOnly
public actual inline fun Float.withSign(sign: Float): Float = this.toDouble().withSign(sign.toDouble()).toFloat()

```

Returns this value with the sign bit same as of the [sign] value.

```

@SinceKotlin("1.2")
@InlineOnly
public actual inline fun Float.withSign(sign: Int): Float = this.toDouble().withSign(sign.toDouble()).toFloat()

```

Rounds this [Float] value to the nearest integer and converts the result to [Int].

Ties are rounded towards positive infinity.

Special cases:

- `x.roundToInt() == Int.MAX_VALUE` when `x > Int.MAX_VALUE`
- `x.roundToInt() == Int.MIN_VALUE` when `x < Int.MIN_VALUE`

@throws `IllegalArgumentException` when this value is `NaN`

```

@SinceKotlin("1.2")
@InlineOnly
public actual inline fun Float.roundToInt(): Int = toDouble().roundToInt()

```

```
