

## To Whom It May Concern,

A compliance review of Cisco Catalyst 9000 with IOS XE release 17.15 ("the Product") deployed in the following platforms:

- Cat9200
- Cat9300

was completed and found that the Product incorporates the following FIPS 140-2 validated cryptographic module:

- Cisco FIPS Object Module version 7.2a (Certificate <u>#4036</u>)
- Cisco IOS Common Cryptographic Module (IC2M) Rel 5a (Certificate <u>#4222</u>)

Cisco confirms that the cryptographic module listed above provides cryptographic services for the following as applicable:

• TLS (Meraki Cloud, cURL)

The review/testing confirmed that:

- 1. The cryptographic module (mentioned above) does initialize in a manner that is compliant with its Security Policy.
- 2. All applicable cryptographic algorithms used for the services listed above, are handled within the cryptographic module.
- 3. All applicable underlying cryptographic algorithms support each service's key derivation function.

This letter has been generated in accordance with guidance provided by the Cryptographic Module Validation Program (<u>CMVP</u>). The CMVP has not independently evaluated this compliance review.

Any questions regarding these statements may be directed via e-mail to the Cisco Global Certification Team (GCT) at certteam@cisco.com.

Sincerely,

Edward D Paradia

Ed Paradise Cisco Senior Vice President Foundational & Government Security
