December 2, 2024

To Whom It May Concern,

A compliance review of Cisco Secure Network Analytics (SNA), version 7.5.1 ("the Product") deployed in the following platforms:

• Secure Network Analytics Manager
• Secure Network Analytics Flow Collector (including Flow Collector for Netflow)
• Secure Network Analytics Flow Sensor

was completed and found that the Product incorporates the following FIPS 140-3 validated cryptographic module:

• CiscoSSL FIPS Provider (FIPS 140-3 Cert. #4891)
  https://csrc.nist.gov/projects/cryptographic-module-validation-program/certificate/4891
• BC-FJA (Bouncy Castle FIPS Java API) (FIPS 140-3 Cert. #4743)
  https://csrc.nist.gov/projects/cryptographic-module-validation-program/certificate/4743

Cisco confirms that the cryptographic module listed above provides cryptographic services for the following as applicable:

• SSHv2, TLSv1.2, TLSv1.3– FIPS Provider 8.0
• TLSv1.2, TLSv1.3 – Bouncy Castle

The review/testing confirmed that:

1. The cryptographic module (mentioned above) does initialize in a manner that is compliant with its Security Policy.
2. All applicable cryptographic algorithms used for the services listed above are handled within the cryptographic module.
3. All applicable underlying cryptographic algorithms support each service's key derivation function.

This letter has been generated in accordance with guidance provided by the Cryptographic Module Validation Program (CMVP). The CMVP has not independently evaluated this compliance review.

Any questions regarding these statements may be directed via e-mail to the Cisco Global Certification Team (GCT) at certteam@cisco.com.

Sincerely,

Ed Paradise
