Fehlerbehebung Allgemeine Informationen Arbeitsprotokollanalyse **ISE-Protokolle** Clientprotokolle (spw-Protokolle)

Einführung

In diesem Dokument wird beschrieben, wie Sie Bring Your Own Device (BYOD) auf der Cisco Identity Services Engine (ISE) für Windows-Systeme mithilfe von Single-SSID und Dual-SSID konfigurieren.

Voraussetzungen

Anforderungen

Cisco empfiehlt, dass Sie über Kenntnisse in folgenden Bereichen verfügen:

- Konfiguration der Cisco ISE Version 3.0
- Konfiguration des Cisco WLC
- BYOD

Verwendete Komponenten

Die Informationen in diesem Dokument basierend auf folgenden Software- und Hardware-Versionen:

Cisco ISE Version 3.0

- Windows 10
- WLC und AP

Die Informationen in diesem Dokument beziehen sich auf Geräte in einer speziell eingerichteten Testumgebung. Alle Geräte, die in diesem Dokument benutzt wurden, begannen mit einer gelöschten (Nichterfüllungs) Konfiguration. Wenn Ihr Netzwerk in Betrieb ist, stellen Sie sicher, dass Sie die potenziellen Auswirkungen eines Befehls verstehen.

Theorie

In einer einzigen SSID wird BYOD nur noch eine SSID für die Integration von Geräten verwendet. Später wird der uneingeschränkte Zugriff auf die registrierten Geräte gewährt. Zuerst stellt der Benutzer über den Benutzernamen und das Kennwort (MSCHAPv2) eine Verbindung zur SSID her. Nach erfolgreicher Authentifizierung auf der ISE wird der Benutzer zum BYOD-Portal umgeleitet. Nach Abschluss der Geräteregistrierung lädt der Endclient den Native Supplicant Assistant (NSA) von der ISE herunter. NSA wird auf dem Endclient installiert und lädt das Profil und das Zertifikat von der ISE herunter. Die NSA konfiguriert die Wireless-Komponente, und der Client installiert das Zertifikat. Endpunkt führt eine weitere Authentifizierung für dieselbe SSID mithilfe des heruntergeladenen Zertifikats mithilfe von EAP-TLS durch. Die ISE überprüft die neue Anfrage vom Client und verifiziert die EAP-Methode und die Geräteregistrierung und gewährt vollständigen Zugriff auf das Gerät.

Windows BYOD Einzelne SSID-Schritte -

- Ursprüngliche EAP-MSCHAPv2-Authentifizierung
- Umleitung zum BYOD-Portal
- Geräteregistrierung
- NSA-Download
- Profildownload
- Zertifikatdownload
- EAP-TLS-Authentifizierung

Konfiguration

ISE-Konfiguration

Schritt 1: Hinzufügen eines Netzwerkgeräts in der ISE und Konfigurieren von RADIUS und gemeinsam genutztem Schlüssel

Navigieren Sie zu ISE > Administration > Network Devices > Add Network Device.

Schritt 2: Erstellen Sie eine Zertifikatsvorlage für BYOD-Benutzer. Die Vorlage muss über eine Client Authentication Enhanced Key Usage verfügen. Sie können die Standard-Vorlage EAP_Certificate_Template verwenden.

Cisco ISE		Administration · System
Deployment Licensing	Certificates Logging	Maintenance Upgrade Health Checks Backup & Restore Admin Access Settings
	Edit Certificate Template	
Certificate Management	* Name	BYOD_Certificate_template
Certificate Authority \sim	Description	
Overview		
Issued Certificates	Subject	
Certificate Authority Certifica	Common Name (CN)	\$UserName\$ 🕕
Internal CA Settings	Organizational Unit (OU)	tac
Certificate Templates		
External CA Settings	Organization (O)	cisco
	City (L)	bangalore
	State (ST)	Karnataka
	Country (C)	IN
	Subject Alternative Name (SAN)	HAC Address
	Кеу Туре	RSA V
	Key Size	2048 ~
	* SCEP RA Profile	ISE Internal CA
	Valid Period	3652 Day(s) (Valid Range 1 - 3652)
	Extended Key Usage	Client Authentication Server Authentication

Schritt 3: Erstellen Sie ein systemeigenes Supplicant-Profil für ein Wireless-Profil.

Navigieren Sie zu ISE > Work Center > BYOD > Client Provisioning. Klicken Sie auf Hinzufügen, und wählen Sie Native Supplicant Profile (NSP) aus dem Dropdown-Menü aus.

Hier muss der SSID-Name mit dem SSID übereinstimmen, mit dem Sie eine Verbindung hergestellt haben, bevor Sie ein SSID-BYOD durchführen. Wählen Sie das Protokoll als TLS aus. Wählen Sie eine Zertifikatsvorlage aus, wie im vorherigen Schritt erstellt, oder Sie können die Standard-Vorlage EAP_Certificate_Template verwenden.

Wählen Sie unter Optionale Einstellungen die Benutzer- oder Benutzer- und Systemauthentifizierung gemäß Ihren Anforderungen aus. In diesem Beispiel wird es als Benutzerauthentifizierung konfiguriert. Lassen Sie andere Standardeinstellungen unverändert.

	SSID Name Prox	Security * Allowed Protocol *	WPA2 Enterprise V TLS V		cate Templ			
		Certificate Template Optional Setti Windows Settings Authentication Mode	BYOD_Certificate_template ngs User	~ 0				

Schritt 4: Erstellen von Client-Bereitstellungsrichtlinien für Windows-Geräte.

Navigieren Sie zu ISE > Work Center > BYOD > Client Provisioning > Client Provisioning Policy (ISE > Work Center > BYOD > Client Provisioning > Client Provisioning Policy (Client-Bereitstellungsrichtlinie). Wählen Sie das Betriebssystem als Windows ALL aus. Wählen Sie WinSPWizard 3.0.0.2 und NSP aus, die im vorherigen Schritt erstellt wurden.

E Cisco ISE		Work Center	ers - BYOD		🔺 Evaluation Mode 46 Days 🔍 🔗 🗖

	II 🗹 MAC OS	If Any ar	nd Mac OSX and	Condition(s)	then CiscoTemporalAgentOSX Edit ~ 4.8.00176 And MacOsXSPWizard
					Save

Schritt 5: Erstellen Sie ein **Autorisierungsprofil** für Geräte, die nicht als BYOD-Geräte registriert sind.

Navigieren Sie zu ISE > Policy > Policy Elements > Results> Authorization > Authorization Profiles > Add.

Wählen Sie unter **"Allgemeine Aufgabe**" die Option **Bereitstellung systemeigener Komponenten aus**. Definieren Sie einen Namen für die Weiterleitungskontrollliste, der auf dem WLC erstellt wird, und wählen Sie das BYOD-Portal aus. Hier wird das Standardportal verwendet. Sie können ein benutzerdefiniertes BYOD-Portal erstellen. Navigieren Sie zu **ISE > Work Center > BYOD > Portale** und Komponenten, und klicken Sie auf **Hinzufügen**.

■ Cisco ISE		Policy · Policy Elements	
Dictionaries Conc	ditions F	Results	
Authentication	>	* Name BYOD_Wireless_Redirect

		Common Tasks	
		Web Redirection (CWA, MDM, NSP, CPP)	
		Native Supplicant Provisioning V ACL BYOD-Initial V Value BYOD Portal (default) V	

Schritt 6: Erstellen Sie ein Zertifikatprofil.

Navigieren Sie zu **ISE > Administration > External Identity Sources > Certificate Profile**. Erstellen Sie hier ein neues Zertifikatprofil, oder verwenden Sie das standardmäßige Zertifikatprofil.

E Cisco ISE		Administration - Identity Management
Identities Groups External Iden	tity Sources Identity Sou	Irce Sequences Settings
External Identity Sources	Certificate Authentication Profiles Lis Certificate Authentication	a Profile cert_profile
 Preloaded_Certificate_Prof Active Directory ADJoioint LDAP 	Description

	Match Client Certificate Against Certificate In Identity Store ()	Never Only to resolve identity ambiguity Always perform binary comparison

Schritt 7: Erstellen Sie eine Identitätsquellensequenz, und wählen Sie das im vorherigen Schritt erstellte Zertifikatprofil aus, oder verwenden Sie das Standardzertifikatprofil. Dies ist erforderlich, wenn Benutzer nach der BYOD-Registrierung EAP-TLS durchführen, um vollständigen Zugriff zu erhalten.

≡ Cis	ISE ISE		A	Administration - Identity Management

	Available	Se	elected						
	Internal Endpo	ints Int	ternal Users						
	Guest Users	A	DJoioint						

Schritt 8: Erstellen eines Policy Set, einer Authentifizierungsrichtlinie und einer Autorisierungsrichtlinie.

Navigieren Sie zu ISE > Policy > Policy Sets (ISE > Richtlinien > Richtliniensätze). Erstellen Sie einen Richtliniensatz, und speichern Sie ihn.

Erstellen Sie eine Authentifizierungsrichtlinie, und wählen Sie die im vorherigen Schritt erstellte Identitätsquellensequenz aus.

Erstellen einer Autorisierungsrichtlinie. Sie müssen zwei Richtlinien erstellen.

1. Für Geräte, die nicht für BYOD registriert sind. Geben Sie ein in Schritt 5 erstelltes Redirect-Profil ein.

2. BYOD-registrierte Geräte, die EAP-TLS ausführen. Ermöglichen Sie vollständigen Zugriff auf diese Geräte.

Überprüfen Sie das My Devices-Portal.

Navigieren Sie zum MyDevices-Portal, und melden Sie sich mit den Anmeldeinformationen an. Sie sehen den Gerätenamen und den Registrierungsstatus.

Sie können eine URL für das MyDevices-Portal erstellen.

Navigieren Sie zu ISE > Work Center > BYOD > Portal and Components > My Devices Portal > Login Settings und geben Sie dann die vollqualifizierte URL ein.
