Create a PEGA Ticket from Control Hub

Contents

Introduction

This document describes the process to open a PEGA ticket in Control Hub in a Webex Calling organization.

Prerequisites

Requirements

Access to Control Hub.

Components used

The information in this document is based on these software and hardware versions:

- Control Hub

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, ensure that you understand the potential impact of any command.

Background Information

PEGA tickets are handled by the Cisco PSTN team to assist Webex Calling administrators that want to perform administrative actions like order numbers, port numbers or ask a question regarding existing services.

For organizations with Cisco Calling Plans, these actions can be done from **Control Hub** which makes these tasks less difficult, avoiding multiple points of administration.
Note: For further information regarding the Cisco Calling Plans, refer to the **Related Information** section at the end of this document.
Steps to create a PEGA ticket

Step 1. In [Control Hub](#), go to **Services**, and choose **Calling.**

Step 2. Click on **PSTN** and select **Orders**.

PSTN Tab in Control Hub

Step 3. Select any of the orders listed and on the order window scroll down until the end.

Step 4. Click **Open a Cisco Calling Plans Support Case**.

Order Window View

Step 6. This opens up a new window on your browser, where you can select from the options of **Ordering new numbers**, **Port existing numbers** and **Questions regarding existing services**.

PEGA Ticket Page

List of Issues Available per Option

These are the specific issues available for each of the options that show up in the dashboard:
