## Introduction

This document describes how to do prechecks on PIM module when it is deployed and to confirm that the cellular interface is assigned an IP address.

## Prerequisites

### Requirements

Cisco recommends that you have basic knowledge of these topics:

- 5G Cellular Network Basics
- Cisco P-5GS6-GL module
- Cisco IOS® XE and Cisco IOS® CG

### Components Used

The information in this document is based on these software and hardware versions:

- Cisco C8300 with Cisco IOS® XE version 17.06.03a with a P-5GS6-GL module plugged in.

This applies to a P-5GS6-GL module connected to a router in a controller mode in SD-WAN.

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, ensure that you understand the potential impact of any command.

## Troubleshoot

### Device not Attached to 5G Band

1. Ensure with the carrier that the acquired network plan is activated for 5G band.
2. Confirm with the carrier about 5G coverage area in the zone the 5G device is placed.

### Confirm the Cellular Interface of the Device is not Assigned an IP Address

```
<#root>
```

```
ISR#sh ip int brief
```

Interface	IP-Address	OK?	Method	Status	Protocol
GigabitEthernet0/0/0	172.16.173.10	YES	other	up	up
GigabitEthernet0/0/1	unassigned	YES	unset	up	up
Gi0/0/1.2989	10.10.22.74	YES	other	up	up
GigabitEthernet0/0/2	unassigned	YES	unset	down	down
GigabitEthernet0/0/3	10.244.182.1	YES	other	up	up
GigabitEthernet0/0/4	unassigned	YES	unset	down	down
GigabitEthernet0/0/5	unassigned	YES	unset	down	down
Cellular0/2/0	unassigned	YES	IPCP	up	up
Cellular0/2/1	unassigned	YES	IPCP	administratively down	down
Sdwan-system-intf	10.244.182.1	YES	unset	up	up
Loopback65528	192.168.1.1	YES	other	up	up
NVIO	unassigned	YES	unset	up	up
Tunne10	172.16.173.138	YES	TFTP	up	up
Tunne12989001	10.10.22.74	YES	TFTP	up	up

### Confirm the Device Detects the SIM

```
<#root>
```

```
ISR#sh controllers cellular 0/X/0 details
```

```
Cellular Dual SIM details:
```

```
-----
```

```
SIM 0 is present
```

```
SIM 1 is not present
```

```
SIM 0 is active SIM
```

<#root>

ISR#sh cellular 0/X/0 security

Active SIM = 0

SIM switchover attempts = 0

Card Holder Verification (CHV1) = Disabled

SIM Status = OK

SIM User Operation Required = None

Number of CHV1 Retries remaining = 3

## Confirm the Device Actively Uses Required SIM

<#root>

ISR#sh controllers cellular 0/2/0 details

Cellular Dual SIM details:

-----

SIM 0 is present

SIM 1 is not present

SIM 0 is active SIM

## Verify the Modem Firmware is Updated and SIM Information is Populated

If the SIM information is not populated, ensure the SIM is inserted and not defective:

<#root>

isr#show cellular 0/X/0 all

Hardware Information

=====

Modem Firmware Version = MOH.020202

Host Firmware Version = A0H.000292

Device Model ID = FN980

International Mobile Subscriber Identity (IMSI) = XXXXXXXXXXXXXXXXX

International Mobile Equipment Identity (IMEI) = XXXXXXXXXXXXXXXXX

Integrated Circuit Card ID (ICCID) = XXXXXXXXXXXXXXXXX

Mobile Subscriber Integrated Services

Digital Network-Number (MSISDN) = XXXXXXXXXX

\*

\*

## Check the Radio values

If radio values are out of valid ranges, ensure all antennas are connected and not defective.

### Valid Radio Ranges

RSSI: “Good” value is greater than -80 dBm (such as 79 is greater than -80)

RSRP: “Good” value is greater than -105 dBm (such as -104 is greater than -105)

RSRQ: “Good” value is greater than -12 dBm (such as 11 is greater than -12)

SNR: “Good” value is greater than 5 dBm (6 is better than 5)

The RSSI = -128 dBm usually means that the modem is down or the antennas are not connected. No radio signal at all.

```
<#root>
```

```
Isr#sh cellular 0/2/0 radio
```

```
*
```

```
Current RSSI = -65 dBm
```

```
Current RSRP = -94 dBm
```

```
Current RSRQ = -12 dB
```

```
Current SNR = 8.4 dB
```

```
*
```

```
*
```

## Confirm Whether the PS State is Attached or not

If PS state is not attached, make sure the correct APN is in use and provisioned on carrier side:

```
<#root>
```

```
isr#sh cellular 0/2/0 network
```

```
Current System Time = Sun Jan 6 3:11:7 1980
```

```
Current Service Status = No service
```

```
Current Service = Unknown
```

```
Current Roaming Status = Home
```

```
Network Selection Mode = Automatic
```

```
Network = 420 212
```

```
Mobile Country Code (MCC) = 420
```

```
Mobile Network Code (MNC) = 4
```

```
Packet switch domain(PS) state = Not attached
```

Registration state(EMM) = Searching/Not Registered  
EMM Sub State = No IMSI  
Tracking Area Code (TAC) = 0  
Cell ID = 0  
Network MTU = Not Available

## Check Profile Configuration and Correct APN is in Use

<#root>

```
isr#show cellular 0/x/0 profile  
Profile password Encryption level = 7
```

Profile 1 = INACTIVE\* \*\*

-----

PDP Type = IPv4

Access Point Name (APN) = SAMIS.M2M

Authentication = None

Profile 2 = INACTIVE

-----

PDP Type = IPv4v6  
Access Point Name (APN) = ims  
Authentication = None

Profile 5 = INACTIVE

-----

PDP Type = IPv4  
Access Point Name (APN) = SAMIS.M2M  
Authentication = None

- \* - Default profile
- \*\* - LTE attach profile

Configured default profile for active SIM 0 is profile 1.

## Confirm that the Detected Network, MCC and MNC Values are Correct

<#root>

```
isr#sh cellular 0/2/0 network
```

Current System Time = Sun Jan 6 3:11:7 1980  
Current Service Status = No service  
Current Service = Unknown  
Current Roaming Status = Home  
Network Selection Mode = Automatic

Network = 420 212

Mobile Country Code (MCC) = 420

Mobile Network Code (MNC) = 4

Packet switch domain(PS) state = Not attached  
Registration state(EMM) = Searching/Not Registered  
EMM Sub State = No IMSI  
Tracking Area Code (TAC) = 0  
Cell ID = 0

Network MTU = Not Available

If the values shown are incorrect, confirm using <https://www.mcc-mnc.com/>:

Show 25 entries Search: 420

MCC	MNC	ISO	Country	Country Code	Network
230	219	cz	Czech Republic	420	Tesco Mobile
230	219	cz	Czech Republic	420	TOPtelek
230	219	cz	Czech Republic	420	TT Quality
230	219	cz	Czech Republic	420	Uniphone
230	09	cz	Czech Republic	420	Uniphone

420	219	sa	Saudi Arabia	966	Salam
420	01	sa	Saudi Arabia	966	STC / Al Jawal
420	06	sa	Saudi Arabia	966	Virgin Mobile
420	04	sa	Saudi Arabia	966	Zain

Showing 26 to 40 of 40 entries (filtered from 3,115 total entries.)

## Force Change to Correct MCC and MNC Values

1. Shutdown the cellular interface:

```
conf t  
int cellular 0/X/0  
shut
```

2. Perform a PLMN search, this forces the modem search for available networks in the area:

```
cellular 0/X/0 lte plmn search //This command is entered in PRIV mode, no config mode.
```

3. Once the PLMN search is completed, see the available networks with:

```
show cellular 0/X/0 network
```

4. Select the desired network with:

```
cellular 0/X/0 lte plmn select manual MCC MNC INDX RAT //Enter the desired MCC,MNC,INDX and RAT from
```

5. To force select the desired network :

```
cellular 0/X/0 lte plmn select force MCC MNC INDX RAT //Enter the desired MCC,MNC,INDX and RAT from
```

## Check the Available PLMNs

```
<#root>
```

```
isr#sh cellular 0/2/0 network
Current System Time = Tue Jan 8 23:43:48 1980
Current Service Status = No service
Current Service = Unknown
Current Roaming Status = Roaming
Network Selection Mode = Automatic
Network = Zain KSA
Mobile Country Code (MCC) = 420
Mobile Network Code (MNC) = 4
Packet switch domain(PS) state = Not attached
Registration state(EMM) = Not registered
EMM Sub State = Attach needed
Tracking Area Code (TAC) = 0
Cell ID = 0
```

```
Available PLMNs at = 11:31:30 AST Thu Nov 21 2024
```

Idx	MCC	MNC	RAT	Desc
1	420	1	lte	stc

2 420 3 lte Mobily

3 420 4 lte Zain KSA
