

# Secure Shell (SSH) Client User Authentication Settings on Sx500 Series Stackable Switches

## Objective

The Secure Shell (SSH) server feature enables you to establish an SSH session with the Sx500 Series Stackable Switches. An SSH session is just like a telnet session but it is more secure. The security is obtained by the device when it generates the public and private keys automatically. These keys can also be changed by the user. An SSH session can be opened through the use of the PuTTY application.

This article provides information on how to select the authentication method for a SSH client. It also explains how to set up a username and password for the SSH client on Sx500 Series Stackable Switches.

## Applicable Devices

- Sx500 Series Stackable Switches

## Software Version

- 1.3.0.62

## Client SSH User Authentication Configuration

This section explains how to configure user authentication on the Sx500 Series Stackable Switches.

Step 1. Log in to the web configuration utility and choose **Security > SSH Client > SSH User Authentication**. The *SSH User Authentication* page opens:

### SSH User Authentication

**Global Configuration**

SSH User Authentication Method:  By Password  
 By RSA Public Key  
 By DSA Public Key

**Credentials**

Username:  (Default Username: anonymous)

Password:  Encrypted   
 Plaintext  (Default Password: anonymous)

**SSH User Key Table**

<input type="checkbox"/>	Key Type	Key Source	Fingerprint
<input type="checkbox"/>	RSA	User Defined	b4:47:70:4f:4d:50:fd:f2:a0:f0:ba:c8:80:cc:c8:c6
<input type="checkbox"/>	DSA	Auto Generated	c5:ec:15:a7:3d:a3:b9:c5:9b:4f:56:5a:f8:2b:3a:b0

Step 2. In the Global Configuration area, click the radio button for the desired SSH User Authentication Method. The available options are:

- By Password — This option lets you configure a password for user authentication
- By RSA Public Key — This option lets you use an RSA public key for user authentication. RSA is used for encryption and signing.
- By DSA Public Key — This option lets you use a DSA public key for user authentication. DSA is for only signing.

Step 3. In the Credentials area, in the Username field, enter the user name.

Step 4. If you chose By Password in Step 2, then in the Password field, click the method to enter the password. The available options are:

- Encrypted — This option lets you enter an encrypted password.
- Plaintext — This option lets you enter a plain text password. Plain text is entered so that you can log in to the device and view the password if you forget.

Step 5. Click **Apply** to save your authentication configuration.

Step 6. (Optional) To restore the default username and password, click **Restore Default Credentials**.

Step 7. (Optional) To show the sensitive data of the page in plain text format, click **Display Sensitive Data as Plaintext**.

## SSH User Key Table

This section explains how to manage the SSH User Table on the Sx500 Series Stackable Switches.

Step 1. Log in to the web configuration utility and choose **Security > SSH Client > SSH User Authentication**. The *SSH User Authentication* page opens:

**SSH User Authentication**

**Global Configuration**

SSH User Authentication Method:  By Password  
 By RSA Public Key  
 By DSA Public Key

**Credentials**

Username:  (Default Username: anonymous)

Password:  Encrypted   
 Plaintext  (Default Password: anonymous)

**SSH User Key Table**

<input type="checkbox"/>	Key Type	Key Source	Fingerprint
<input checked="" type="checkbox"/>	RSA	User Defined	b4:47:70:4f:4d:50:fd:f2:a0:10:ba:c8:80:cc:c8:c6
<input type="checkbox"/>	DSA	Auto Generated	c5:ec:15:a7:3d:a3:b9:c5:9b:4f:56:5a:f8:2b:3a:b0

Step 2. Check the check box of the key you wish to manage.

Step 3. (Optional) To generate a new key, click **Generate**. The new key overrides the checked key.

Step 4. (Optional) To edit a current key, click **Edit**. The *Edit SSH Client Authentication Settings* window appears.

When a Key is entered, it should contain the "BEGIN" and "END" markers.

Key Type:

Public Key: 

```
--- BEGIN SSH2 PUBLIC KEY ---  
Comment: RSA Public Key  
AAAAB3NzaC1yc2EAAAABIwAAAIEA79zGK7S5RD5JShWUvOPVFFDnwRyD+cVxuSUn06AHbjxNBP  
Dwgd18jI4Bu3yK0zW5Rn0k79uLzxfKLLcHNGx+r5dJY4ihc+aXfHZKrpzHb33nHQzSdyNpGfME+J9J  
HiD+pleJawnliuGJdKBUEIWgxYbSGC6hko9A9BOe9oAPU=  
--- END SSH2 PUBLIC KEY ---
```

Private Key:  Encrypted 

```
---- BEGIN SSH2 ENCRYPTED PRIVATE KEY ----  
Comment: RSA Private Key  
EZ2eLdVg4K7h1icrGG/jbLqFarPl65f3Neki5NmmAbMRwNDpvNDWgjWc+WkI1Un5Sq2aTyuW  
Zja8heVQY7ZT8h0xVfI9mJ6GYaXKyMjzXxao9MGE3aPYirmPu0m6ZciefLsrj8qlll7Qkll+T3KpAg  
tgPBBf0nwYZR1FYsFzbybJl20oK  
/rugVCP7ejdgeaXQfTMkrmfTaXFHxDzd32Cwa3wJHKjel9eNhill5o35E1WXuMopnUtorcDSevZTI  
Di0JzZpwAMZbbS5rWmwewVl+gFMXqWxMrnfp+Mv6zPuXZ5OyN4MWTgpwtyrfmceDqOUI7sHq9
```

Plaintext

The options you can edit are:

- **Key Type** — This option lets you choose from the Key Type drop-down list the key type of your preference. You can choose RSA or DSA as the key type. RSA is used for encryption and signing, while DSA is for only signing.
- **Public Key** — In this field, you can edit the current public key.
- **Private Key** — In this field, you can edit the private key, and you can click **Encrypted** to see the current private key as an encrypted text, or **Plaintext** to see the current private key in plain text.

Step 5. Click **Apply** to save your changes.

**SSH User Authentication**

**Global Configuration**

SSH User Authentication Method:  By Password  
 By RSA Public Key  
 By DSA Public Key

**Credentials**

Username:  (Default Username: anonymous)

Password:  Encrypted   
 Plaintext  (Default Password: anonymous)

**SSH User Key Table**

<input type="checkbox"/>	Key Type	Key Source	Fingerprint
<input checked="" type="checkbox"/>	RSA	User Defined	44:ad:6e:b4:bd:9e:c9:e9:ff:9c:09:37:29:63:0e:9d
<input type="checkbox"/>	DSA	Auto Generated	49:fa:5b:6c:37:c2:fd:10:45:0f:2d:d2:01:f8:01:4b

Step 6. (Optional) To delete the checked key, click **Delete**.

Step 7. (Optional) To view the details of the checked key, click **Details**. Below is an image of the user key details.
