

Configure Scheduler on a Wireless Access Point

Objective

A Virtual Access Point (VAP) is the wireless equivalent of a Virtual Local Area Network (VLAN) which segments the wireless LAN and simulates multiple access points in one physical device. The wireless scheduler sets a time interval for a VAP or radio to be operational, which helps to save power and increase security. You can associate up to 16 profiles to different VAPs or radio interfaces but each interface is allowed only one profile. Each profile can have a certain number of time rules that control the uptime of the associated VAP or Wireless Local Area Network (WLAN).

Configuring the wireless scheduler lets you automate when the VAP and radio is enabled based on a predefined time interval. The radio is the physical part of the WAP that creates a wireless network. The radio settings on the WAP control the behavior of the radio and determine what kind of wireless signals the WAP sends out. Using the scheduler can help save power and increase security on the network.

This article provides you with instructions on how to configure the wireless scheduler on your Wireless Access Point (WAP).

Applicable Devices

- WAP100 Series
- WAP300 Series
- WAP500 Series

Software Version

- 1.0.0.17 — WAP571, WAP571E
- 1.0.1.2 — WAP150, WAP361
- 1.0.2.2 — WAP351, WAP131
- 1.0.6.2 — WAP121, WAP321
- 1.2.1.3 — WAP371, WAP551, WAP561

Configure Wireless Scheduler

Important: You need to set the time on the WAP before the scheduler configuration as the scheduler is based on time interval. For instructions on how to configure the Time Settings on a WAP, click [here](#).

Enable Wireless Scheduler

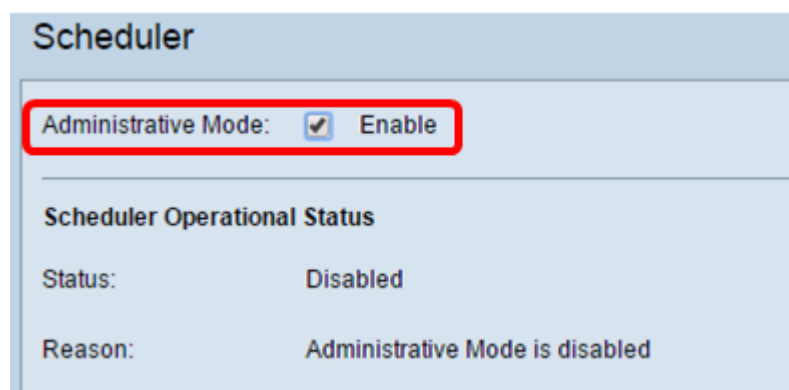

Step 1. Log in to the web-based utility and choose **Wireless > Scheduler**.

Note: The options under the Wireless menu may vary per WAP model. In this example, WAP361 is used.

Step 2. Check the **Enable** Administrative Mode check box to enable the scheduler operation.

Note: By default, Administrative Mode is disabled.

The Scheduler Operational Status area displays the following information:

- Status — This area displays the operational status of the Scheduler. The possible values are Enabled or Disabled. The default value is Disabled.
- Reason — This area displays the reason for the operational status of the scheduler. The possible values are:
 - Administrative Mode is disabled — The scheduler administrative mode is disabled.
 - IsActive — The scheduler is administratively enabled.
 - ConfigDown — Operational status is down because global configuration is disabled.
 - TimeNotSet — Time is not set on the WAP either manually or through the Network Time Protocol (NTP).
 - System Time is outdated — Time is not set on the WAP device either manually or through NTP.
 - ManagedMode — The scheduler is in managed mode.

Note: Available Reason values may vary depending on the WAP that you are using.

Scheduler Profile Configuration

Step 3. Under the Scheduler Profile Configuration area, enter the name of the profile in the *Create a Profile Name* field.

The screenshot shows a form titled "Scheduler Profile Configuration". It contains a text input field labeled "Create a Profile Name:" with the text "Weekdays" entered. To the right of the input field is a button labeled "Add". A red rectangular box highlights the input field.

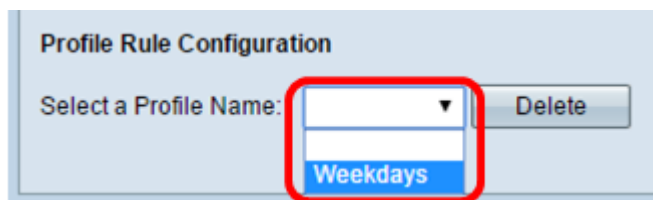

Note: In this example, the profile name Weekdays is used.

Step 4. Click **Add**.

Profile Rule Configuration

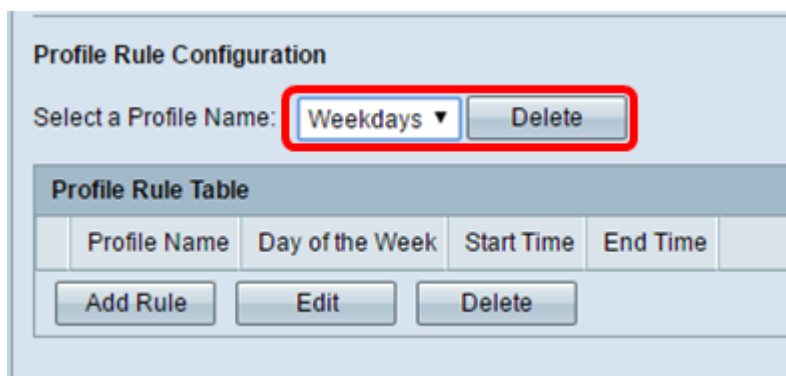

The Profile Rule Configuration area provides configuration settings to create a rule for a profile. Each rule specifies the start time, end time, and day (or days) of the week the radio or VAP can be operational. The rules are periodic in nature and are repeated every week. A valid rule must contain all of the parameters (days of the week, hour, and minute) for the start time and the end time. Rules cannot conflict.

Step 5. Choose the profile for which a rule is to be configured from the Select aProfile Name drop-down list.

The screenshot shows a form titled "Profile Rule Configuration". It contains a dropdown menu labeled "Select a Profile Name:" with "Weekdays" selected. To the right of the dropdown is a button labeled "Delete". A red rectangular box highlights the dropdown menu.

Step 6: (Optional) To delete a profile, click the **Delete** button next to the profile name.

The screenshot shows a form titled "Profile Rule Configuration". It contains a dropdown menu labeled "Select a Profile Name:" with "Weekdays" selected. To the right of the dropdown is a button labeled "Delete". Below this is a table titled "Profile Rule Table" with columns for "Profile Name", "Day of the Week", "Start Time", and "End Time". Below the table are three buttons: "Add Rule", "Edit", and "Delete". A red rectangular box highlights the "Select a Profile Name:" dropdown and the "Delete" button.

Step 7. Once the Profile Rule Table appears, click **Add Rule** to add a new rule to the chosen profile.

Profile Rule Configuration

Select a Profile Name:

Profile Rule Table				
Profile Name	Day of the Week	Start Time	End Time	
<input type="button" value="Add Rule"/>	<input type="button" value="Edit"/>	<input type="button" value="Delete"/>		

Step 8. Check the Profile check box and click **Edit** to configure the rule.

Profile Rule Table				
	Profile Name	Day of the Week	Start Time	End Time
<input checked="" type="checkbox"/>	Weekdays	Daily	00 : 00	00 : 00
<input type="button" value="Add Rule"/>	<input type="button" value="Edit"/>	<input type="button" value="Delete"/>		

Step 9. Choose the repetitive schedule for the rule from the Day of the Week drop-down list. You can configure the rule to occur daily, each weekday, each weekend day (Saturday and Sunday), or any single day of the week.

Profile Rule Table				
	Profile Name	Day of the Week	Start Time	End Time
<input checked="" type="checkbox"/>	Weekdays	Daily	00 : 00	00 : 00
<input type="button" value="Add Rule"/>	<input type="button" value="Edit"/>	<input type="button" value="Delete"/>		

- Daily
- Daily
- Weekday**
- Weekend
- Sunday
- Monday
- Tuesday
- Wednesday
- Thursday
- Friday
- Saturday

Step 10. Choose the start and end times for the rule from the Start Time and End Time drop-down lists.

Profile Rule Table				
	Profile Name	Day of the Week	Start Time	End Time
<input checked="" type="checkbox"/>	Weekdays	Weekday	18 : 30	23 : 59
<input type="button" value="Add Rule"/>	<input type="button" value="Edit"/>	<input type="button" value="Delete"/>		

The fields are described as follows:

- Start Time — The time when the radio or VAP will be operationally enabled. The time is in the HH:MM 24-hour format.
- End Time — The time when the radio or VAP will be operationally disabled. The time is in the

HH:MM 24-hour format.

Step 11. Click **Save**.

Scheduler

Administrative Mode: Enable

Scheduler Operational Status

Status: Disabled

Reason: Administrative Mode is disabled

Scheduler Profile Configuration

Create a Profile Name:

Profile Rule Configuration

Select a Profile Name: Weekdays

Profile Rule Table

	Profile Name	Day of the Week	Start Time	End Time
<input checked="" type="checkbox"/>	Weekdays	Weekday	18 : 30	23 : 59

Step 12. (Optional) To delete a rule, check the profile name check box you want to delete and click the **Delete** button.

Profile Rule Table

	Profile Name	Day of the Week	Start Time	End Time
<input checked="" type="checkbox"/>	Weekdays	Weekday	18 : 30	23 : 59

Step 13. (Optional) Once you are prompted that your wireless settings are about to be updated and you may be disconnected, click **OK**.

Step 14. (Optional) To add and configure more scheduler profiles on your WAP, repeat [Step 3](#) to Step 10.

You should now have successfully enabled and configured the scheduler on your wireless access point.

A configuration window titled "Scheduler" with a light blue header. The content is organized into several sections:

- Administrative Mode:** A checkbox labeled "Enable" is checked.
- Scheduler Operational Status:** A section containing:
 - Status: Enabled
 - Reason: IsActive
- Scheduler Profile Configuration:** A section containing:
 - Create a Profile Name: [text input field] [Add button]
- Profile Rule Configuration:** A section containing:
 - Select a Profile Name: [dropdown menu] [Delete button]

At the bottom of the window is a "Save" button.

Important: A scheduler must be associated with a radio or VAP interface to be in effect. To learn how to associate a wireless scheduler on a WAP, click [here](#) for instructions.
