

Cisco Remote PHY System Bring Up

Finding Feature Information

Your software release may not support all the features that are documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release. The Feature Information Table at the end of this document provides information about the documented features and lists the releases in which each feature is supported.

Use Cisco Feature Navigator to find information about the platform support and Cisco software image support. To access Cisco Feature Navigator, go to the link <http://tools.cisco.com/ITDIT/CFN/>. An account at the <http://www.cisco.com/> site is not required.

- [How to Bring Up, on page 2](#)
- [Updating the Default RPD Password , on page 8](#)

Hardware Compatibility Matrix for Cisco Remote PHY Device

Note

Unless otherwise specified, the hardware components introduced in a given Cisco Remote PHY Device Software Release are supported in all subsequent releases.

Table 1: Hardware Compatibility Matrix for the Cisco Remote PHY Device

Cisco HFC Platform	Remote PHY Device
Cisco GS7000 Super High Output Node	Cisco 1x2 / Compact Shelf RPD Software 2.1 and Later Releases
Cisco GS7000 Super High Output Intelligent Node (iNode)	Cisco 1x2 / Compact Shelf RPD Software 4.1 and Later Releases Cisco Intelligent Remote PHY Device 1x2 <ul style="list-style-type: none">• PID—iRPD-1X2=• PID—iRPD-1X2-PKEY=

Note The -PKEY suffix in the PID indicates units that enable the SCTE-55-2 Out-of-Band protocol support.

Information about Bring Up

Bring up process is prerequisite to the operation of the remote PHY system, just like the cable modem bring up in a DOCSIS system.

How to Bring Up

This section describes how to bring up RPD on Cisco cBR-8.

Configuring DHCP Server

You can choose to configure the DHCP server using any of the following methods.

Configuring DHCP Server using IPv4

To configure DHCP server using IPv4, follow the steps below:

1. Add option for CCAP-Core. Fill in the name, DHCP type, and vendor option string as shown in the figure below.

Design > DHCPv4 > Options

List/Add DHCP Option Definition Sets

Edit DHCP Option Definition Set rpd

rpd		Option Definitions
Attribute		Value
Name*	rpd	
DHCP Type*	V4	
Description		
Vendor Option String	RPD	
Vendor Option Regex String		
Vendor Option Enterprise Id		

2. Define option. Fill in the option number and name as shown in the figure below.

Design > DHCPv4 > Options
List/Add DHCP Option Definition Sets

Edit DHCP Option Definition Set rpdrpd **Option Definitions**

List of Option Definitions for rpd

Number	Name
43	rpd-option-43
2	device-type
61	ccap-cores

366350

3. Define suboption. Fill in the name, type and repeat of suboption 61 as shown in the following figure.

Design > DHCPv4 > Options

List/Add DHCP Option Definition Sets**Edit DHCP Option Definition Set rpd**rpd **Option Definitions**

Attribute	Value
Number*	61
Name*	ccap-cores
Description	
type*	IP address
repeat	1+

4. Add the option into policy as shown in the following figure. Replace the IP address 120.102.15.1 in the figure to the DPIC port IP address.

DHCPv4 Vendor Options	dhcp-cablelabs-config	Select
Configured Options	Name	Number
	[43] (rpd)	rpd-option-43

Configuring DHCP Server using IPv6 Stateless

The Cisco Remote PHY System supports the Stateless Address Auto Configuration (SLAAC). IPv6 address assignment of the RPD is governed by the configuration bits set in the ICMPv6 Router Advertisement (RA) message and the presence of a valid prefix in the Prefix Information Option (PIO). For more information about RPD IPv6 address assignment, refer to section 6.7 of Remote PHY Specification.

To configure DHCP server using IPv6 Stateless and enable SLAAC, follow the steps below:

1. Configure Prefix Type to “stateless” in CNR prefix.
2. Configure ICMPv6 Router RA message M Bit=0 and O Bit =1.

Edit Prefix 2001:93:3:58::0-RPD	
2001:93:3:58::0-RPD	Leases
Reservations	Current Usage
<input type="button" value="Expand All"/> <input type="button" value="Collapse All"/> <input type="button" value="Default View"/> <input type="button" value="Show A-Z View"/>	
<input checked="" type="checkbox"/> Universal Settings	
Attribute	Value
name*	2001:93:3:58::0-RPD
vpn-id	
Prefix Type (dhcp-type)	stateless
address*	2001:93:3:58::/64

Note It is recommended that you follow the DHCP options listed in *Table 2 - Router Advertisement M Bit and O Bit Settings For SLAAC* of section 6.7.1 (CM-SP-R-PHY-I10) or 6.6.1 (CM-SP-R-PHY-I11) in the Remote PHY Specification.

To display the RPD get IPv6 address by SLAAC, use the **show dhcp** command.

```
R-PHY#show dhcp
Interface    IP-Address                      Subnet-Mask
vph0        2001:93:3:58:1204:9fff:fecl:100  ffff:ffff:ffff:ffff::
```

Details:

```
-----
Interface:          vph0
AddrType:          IPv6<Stateless>
TimeServers:        2001:20:1:1::33
TimeOffset:         28800
LogServers:         2001:20:1:1::33
CCAPcores:         2001:93:3:58::1
```

Configuring DHCP Server using IPv6 Stateful

To configure DHCP server using IPv6 Stateful, follow the steps below:

1. Configure Prefix Type to “dhcp” in CNR prefix. See the following image.
2. Configure ICMPv6 Router RA message M Bit=1.

Edit Prefix 2001:93:3:58::0-RPD

2001:93:3:58::0-RPD		Leases	Reservations	Current Usage
<input type="button" value="Expand All"/>	<input type="button" value="Collapse All"/>	<input type="button" value="Default View"/>	<input type="button" value="Show A-Z View"/>	
<input type="checkbox"/> Universal Settings				
Attribute	Value			
name*	2001:93:3:58::0-RPD			
vpn-id				
Prefix Type (dhcp-type)	dhcp			

367920

To display the RPD get IPv6 address by Stateful method, use the **show dhcp** command.

```
R-PHY#show dhcp
Interface  IP-Address          Subnet-Mask
vbh0      2001:93:3:58::d8  ffff:ffff:ffff:ffff::

Details:
-----
Interface:           vbh0
AddrType:            IPv6<Stateful>
TimeServers:         2001:20:1:1::33
TimeOffset:          28800
LogServers:          2001:20:1:1::33
CCAPcores:          2001:93:3:58::1
```

Configuring PTP

To configure PTP, use the following example as reference:

On the Cisco cBR-8 router:

```
interface Loopback1588
 ip address 159.159.159.4 255.255.255.255
interface TenGigabitEthernet5/1/3 /* connect to ASR903 */
 ip address 192.104.10.4 255.255.255.0

ip route 10.90.3.93 255.255.255.255 192.104.10.93 /* route to ASR903 loopback ip */

ptp clock ordinary domain 0
 servo tracking-type R-DTI
 clock-port slave-from-903 slave
 delay-req interval -4
 sync interval -5
 sync one-step
 transport ipv4 unicast interface Lo1588 negotiation
 clock source 10.90.3.93 /* ASR903 loopback ip */

ptp r-dti 1
 ptp-domain 0 /* same domain number with ptp server */
 clock-port 1
 ethernet 1 /* default value is same index with clock-port index, for RPD, ethernet
1=vbh0, ethernet 2=vbh1 */
 clock-source 10.90.3.93 gateway 93.3.10.2 /* clock-source is ASR093 loopback ip,
gateway is ASR903 BDI ID for node */
```

On ASR903 router as PTP primary clock:

```

ptp clock ordinary domain 0
  clock-port Master-to-all-cBR8 master
    sync interval -5
    sync one-step
    transport ipv4 unicast interface Lo1588 negotiation

interface Loopback1588
  ip address 10.90.3.93 255.255.255.255

interface GigabitEthernet0/3/5
  no ip address
  negotiation auto
  cdp enable
  service instance 31 ethernet /* 31 is vlan id */
    encapsulation dot1q 31
    rewrite ingress tag pop 1 symmetric
    bridge-domain 31
  service instance 32 ethernet
    encapsulation dot1q 32
    rewrite ingress tag pop 1 symmetric
    bridge-domain 32
  interface BDI31 /* for cBR, SUP PIC */
    ip address 192.104.10.93 255.255.255.0
    no shut
  interface BDI32 /* For RPD */
    ip address 93.3.10.2 255.255.255.0
    no shut

ip route 159.159.159.4 255.255.255.255 192.104.10.48 /* route to cbr-8 loopback ip */

```

Configuring cBR-8

To configure the cBR-8 to bring up the RPD, use the following example as reference:

```

/* D-PIC TenGiga interface config */
interface TenGigabitEthernet0/1/0
  ip address 93.3.10.1 255.255.255.0
  ip helper-address 20.1.0.33

/* Downstream/Upstream controller profile */
cable downstream controller-profile 101
rf-chan 0 95
  type DOCSIS
  frequency 381000000
  rf-output NORMAL
  qam-profile 1
  docsis-channel-id 1

cable upstream controller 201
  us-channel 0 channel-width 1600000 1600000
  us-channel 0 docsis-mode atdma
  us-channel 0 minislot-size 4
  us-channel 0 modulation-profile 221
  no us-channel 1 shutdown

/* RPD configuration */
cable rpd node1
  identifier 0004.9f03.0061
  core-interface Te0/1/0
    rpd-ds 0 downstream-cable 0/0/0 profile 101
    rpd-us 0 upstream-cable 0/0/0 profile 201

```

```

r-dti 1
rpd-event profile 0
rpd-55d1-us-event profile 0

interface Cable0/0/0
  load-interval 30
  downstream Downstream-Cable 0/0/0 rf-channel 0-23
  upstream 0 Upstream-Cable 0/0/0 us-channel 0
  upstream 1 Upstream-Cable 0/0/0 us-channel 1
  upstream 2 Upstream-Cable 0/0/0 us-channel 2
  upstream 3 Upstream-Cable 0/0/0 us-channel 3
  cable upstream bonding-group 1
    upstream 0
    upstream 1
    upstream 2
    upstream 3
    attributes 80000001
    cable bundle 1
    cable ip-init ipv6
interface Wideband-Cable0/0/0:0
  cable bundle 1
  cable rf-channels channel-list 0-7 bandwidth-percent 10
interface Wideband-Cable0/0/0:1
  cable bundle 1
  cable rf-channels channel-list 8-15 bandwidth-percent 10
cable fiber-node 200
  downstream Downstream-Cable 0/0/0
  upstream Upstream-Cable 0/0/0

```

Setting Device Alias

Configuring an RPD for the first time using the command **cable rpd name** triggers RPD provisioning. In Cisco IOS XE Gibraltar 16.12.1z and later releases, the RPD name configured during RPD configuration on the Cisco cBR is set as the device alias of the RPD. Device Alias is an alias for the RPD device, used by device configuration and management systems.

Note

You can configure device alias of an RPD via MIB docsRphyCtrlRpdInitProvCtrlDeviceAlias. After an RPD reset, the device alias resets. The Cisco cBR sets the RPD name configured during RPD provisioning as the device alias.

The following example shows the use of **cable rpd name**.

```

/* RPD configuration */
cable rpd node1
  identifier 0000.5e00.0061
  core-interface Te0/1/0
    rpd-ds 0 downstream-cable 0/0/0 profile 101
    rpd-us 0 upstream-cable 0/0/0 profile 201
  r-dti 1
  rpd-event profile 0
  rpd-55d1-us-event profile 0

```

The following example shows the device alias.

```

Router#show cable rpd 0000.5e00.0061 identification
RPD ID : 0000.5e00.0061
Vendor Name : Cisco

```

Updating the Default RPD Password

```

```

Updating the Default RPD Password

You should update the default RPD access credentials immediately after you log in to the RPD. From RPD 7.7, it is mandatory to update the SSH login password.

If you continue to use the default password, all downstream channels become inactive. A warning message appears of the Cisco cBR core and an event is generated for default password usage. The event is generated for RPD 6.7 and later. The RPD sends this event to the primary core to which it is connected.

The following message appears when you log in to the RPD using the default credentials:

```

2020-01-13 04:48:26,584-rpd_logging.py-119-ERROR-0x80090807:Service Disabled - PLEASE CHANGE
    RPD SSH PASSWORD IMMEDIATELY - default login credentials detected in use
2020-01-13 04:48:26,586-cli_main.py-216-WARNING-Default password detected in use

```

```

*****
***** SERVICE IMPACTING *****
***** PLEASE READ *****
*****
Default login credentials detected in use.
In order to enhance the security of your network,
default login credentials must be changed on this RPD.

```

@@@ RPD SERVICE HAS BEEN DISABLED !!! @@@

```

*****
***** CHANGE SSH PASSWORD *****
***** IMMEDIATELY *****
*****

```

!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

```
SECURITY WARNING: ssh password login is accessible!
Please use pubkey login and set password login off!
!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!
```

Welcome to Cisco R-PHY

R-PHY>

Check the current SSH account details using the following command. If you use the default credentials, you can see a similar output:

```
R-PHY#show ssh account
Account Num: 3
Current SSH Accounts:
admin *** Warning ! Default Password in Use ***
test
new
```

When the downstream port is inactive due to the use of default credentials, the OFDM channel and the QAM channel also become inactive. To check whether the downstream port is inactive, use the following command:

```
R-PHY#show downstream port configuration
Admin: UP
Muted: MUTED
BasePower: 21 dBmV
```

```
R-PHY#show downstream channel configuration
Chan State Frequency Type Annex Modulation Srate Interleave Power Muted
```

Chan	State	Type	StartFreq	Width	PlcFreq	CPrefix	RollOff	Interleave	Power	Muted	Spacing
158	UP	OFDM	645000000	192000000	651000000	1024	128	16		50kHz	
			21.0	MUTED							

*NOTE: Start frequency and channel width do not cover guardband override scenario.

Activate the Downstream Port

You can activate the downstream port using one of the following methods:

- Disable the SSH password and set up the RPD to use server generated SSH keys.
- Change the password for the admin user.
- Create a new user and delete the admin user.

Disable SSH Password

Disable the SSH password and set up the RPD to use server generated SSH keys.

1. Generate a new NMS key on SSH server

```
$ cat ~/.ssh/id_rsa.pub
$ ssh-keygen -t rsa
$ cat ~/.ssh/id_rsa.pub
ssh-rsa AAAAB3NzaC1yc2EAAAQABIAwAAgEAtQCXVFmRIwemejbTx0+U8taMq5n4Zetu
```

Updating the Default RPD Password

```

XutoR8fzzs+4hingZ4X9DMMNwTQ6WOzjuKq6iU= userid@example.cisco.com
```

- Add this new NMS key to the RPD through RPD CLI

```
R-PHY#conf t
R-PHY(config)#ssh pubkey add ?
LINE                      NMS's pubkey
R-PHY(config)#ssh pubkey add ssh-rsa AAAAB3NzaC1yc26876bhjds

s+4hingZ4X9DMMNwTQ6WOzjuKq6iU= xxx@xxx.xxx.com
```

- Disable RPD SSH password login

```
R-PHY#conf terminal
R-PHY(config)#ssh password ?
off                  disable ssh password login
on                  enable ssh password login
R-PHY(config)#ssh password off
Successfully Disabled Password, SoftReset in 10 seconds
```

Change the Password for the Admin User

```
R-PHY#config terminal
R-PHY(config)#ssh chpasswd admin
Please enter password for 'admin':
Please re-enter your password:
chpasswd: password for 'admin' changed

Successfully Changed from Default Password, SoftReset in 10 seconds
```

Create a New User and Delete the Admin User

```
R-PHY(config)#ssh add rpdadmin
Changing password for rpdadmin
New password:
Retype password:
passwd: password for rpdadmin changed by root
R-PHY(config)#ssh delete admin
Warning: Are you sure to delete this account? [No/Yes]
yes
delete account 'admin' successfully
R-PHY(config) #
```

```
Successfully Deleted user admin, SoftReset in 10 seconds
```

■ Updating the Default RPD Password
