New and Changed Features, Release 2.3.6

The following table summarizes the new and changed features and provides information about where they are documented.

Table 1: New and Changed Features for Cisco DNA Center, Release 2.3.6

Feature	Description
Deprecation of Selective Service Instance Filter Based on MAC Address	<p>In the Cisco Wide Area Bonjour service filter policy bulk configuration XLS template, the static MAC-address based Selective Services (Advanced) capability is deprecated to support location-based services.</p> <p>The Cisco Wide Area Bonjour application replaces the feature with the microlocation-based mDNS service routing across wired and wireless network infrastructure. The global mDNS policy in Cisco Wide Area Bonjour application can be updated with Location Group ID to discover and distribute policy-based service routing across IP, MPLS, and VXLAN-enabled networks.</p> <p>See Cisco Wide Area Bonjour Bulk Configuration.</p>
