Verified Scalability Guide for Cisco APIC, Releases 5.1(1) and 5.1(2), Multi-Site, Release 3.1(1), and Cisco Nexus 9000 Series ACI-Mode Switches, Releases 15.1(1) and 15.1(2)

Revised: May 17, 2024

Overview

This guide contains the maximum verified scalability limits for Cisco Application Centric Infrastructure (Cisco ACI) parameters in the following releases:

- Cisco Application Policy Infrastructure Controller (Cisco APIC), releases 5.1(1) and 5.1(2)
- Cisco ACI Multi-Site, release 3.1(1)
- Cisco Nexus 9000 Series ACI-Mode Switches, releases 15.1(1) and 15.1(2)

These values are based on a profile where each feature was scaled to the numbers specified in the tables. These numbers do not represent the theoretically possible Cisco ACI fabric scale.

New and Changed Information

The following changes have been made to this document since initial release:

Date	Changes
February 2, 2023	Updated "Number of EIGRP neighbors" scale.
May 11, 2022	Added dual-stack scale for "Number of L3 Outs".
April 29, 2022	Updated "Number of External Route Reflectors between Pods" scale. Updated "Number of External EPGs" and "Number of External EPGs per L3 Out" scale with examples for clarity.
April 21, 2022	Added "DHCP relay addresses per BD across all labels" scale.
March 25, 2022	Updated "PTP Scalability Limits" section.
March 15, 2022	Updated "Maximum number of Data Plane policers at the interface level" scale numbers.
February 25, 2022	Updated "Number of source EPGs in tenant SPAN sessions" if both Access and Tenant SPAN are configured.
December 17, 2021	Added NetFlow scale numbers.
October 22, 2021	First release of this document.

General Scalability Limits

- **L2 Fabric:** L2 Fabric in this document refers to an ACI fabric that contains only BDs with Scaled L2 Only mode (formerly known as Legacy mode). See **Bridging** > **Bridge Domain Options** > **Scaled L2 Only Mode - Legacy Mode** in APIC *Layer 2 Configuration Guide* for details about Scaled L2 Only mode.

- **L3 Fabric:** The ACI L3 fabric solution provides a feature-rich highly scalable solution for public cloud and large enterprise. With this design, almost all supported features are deployed at the same time and are tested as a solution. The scalability numbers listed in this section are multi-dimensional scalability numbers. The fabric scalability numbers represent the overall number of objects created on the fabric. The per-leaf scale numbers are the objects created and presented on an individual leaf switch. The fabric level scalability numbers represent APIC cluster scalability and the tested upper limits. Some of the per-leaf scalability numbers are subject to hardware restrictions. The per-leaf scalability numbers are the maximum limits tested and supported by leaf switch hardware. This does not necessarily mean that every leaf switch in the fabric was tested with maximum scale numbers.
- **Stretched Fabric:** Stretched fabric allows multiple fabrics (up to 3) distributed in multiple locations to be connected as a single fabric with a single management domain. The scale for the entire stretched fabric remains the same as for a single site fabric. For example a L3 stretched fabric will support up to 400 leaf switches total which is the maximum number of leaf switches supported on a single site fabric. Parameters only relevant to stretched fabric are mentioned in the tables below.
- **Multi-Pod:** Multi-Pod enables provisioning a more fault-tolerant fabric comprised of multiple Pods with isolated control plane protocols. Also, Multi-Pod provides more flexibility with regard to the full mesh cabling between leaf and spine switches. For example, if leaf switches are spread across different floors or different buildings, Multi-Pod enables provisioning multiple Pods per floor or building and providing connectivity between Pods through spine switches.

  Multi-Pod uses a single APIC cluster for all the Pods; all the Pods act as a single fabric. Individual APIC controllers are placed across the Pods but they are all part of a single APIC cluster.
- **Multi-Site**: Multi-Site is the architecture interconnecting and extending the policy domain across multiple APIC cluster domains. As such, Multi-Site could also be named as Multi-Fabric, since interconnects separate Availability Zones (Fabrics) and managed by an independent APIC controller cluster. An ACI Multi-Site Orchestrator is part of the architecture and is used to communicate with the different APIC domains to simplify the management of the architecture and the definition of inter-site policies.

Leaf Switches and Ports

The maximum number of leaf switches is 400 per Pod and 500 total in Multi-Pod fabric. The maximum number of physical ports is 24,000 per fabric. The maximum number of remote leaf (RL) switches is 128 per fabric, with total number of BDs deployed on all remote leaf switches in the fabric not exceeding 60,000. The total number of BDs on all RLs is equal to the sum of BDs on each RL.

If Remote Leaf Pod Redundancy policy is enabled, we recommended that you disable the `Pre-emption` flag in the APIC for all scaled up RL deployments. In other words, you must wait for BGP CPU utilization to fall under 50% on all spine switches before you initiate pre-emption.

Breakout Ports

The N9K-C9336C-FX2 switch supports up to 34 breakout ports in both 10G or 25G mode.

General Scalability Limits

Cisco ACI Multi-Site Scalability Limits

Stretched Vs. Non-Stretched

Stretched in Multi-Site means that the fabric has stretched objects such as EPGs, BDs, VRFs, or subnets across multiple sites or has cross-site contracts between EPGs.

Non-Stretched in Multi-Site means all objects such as EPG, contract, and BD are local to a site only and do not cross the local-site boundary.

The total number of stretched and non-stretched objects must not exceed the maximum verified scalability limit for that object, which are listed in their respective sections in this guide.

Note For maximum scale Multi-Site configurations with many features enabled simultaneously, it is recommended that those configurations be tested in a lab before deployment.

Fabric Topology, SPAN, Tenants, Contexts (VRFs), External EPGs, Bridge Domains, Endpoints, and Contracts Scalability Limits

The following table shows the mapping of the "ALE/LSE Type" to the corresponding ToR switches. This information is helpful to determine which ToR switch is affected when we use the terms ALE v1, ALE v2, LSE, or LSE2 in remaining sections.

Note In the following table, the N9K-C9336C-FX2 and N9K-C93360YC-FX2 switches are listed as LSE for scalability limits purposes only; the switches support LSE2 platform features. Consult specific feature documentation for the full list of supported devices.

ALE/LSE Type	ACI-Supported ToR switches
ALE v2	• N9K-C9396TX + N9K-M6PQ • N9K-C93128TX + N9K-M6PQ • N9K-C9396PX + N9K-M6PQ • N9K-C9372TX 64K • N9K-C9332PQ • N9K-C9372PX
LSE	• N9K-C93108TC-EX • N9K-C93180YC-EX • N9K-C93180LC-EX • N9K-C9336C-FX2 • N9K-C93216TC-FX2 • N9K-C93240YC-FX2 • N9K-C93360YC-FX2

ALE/LSE Type	ACI-Supported ToR switches
LSE2	• N9K-C93108TC-FX • N9K-C93180YC-FX • N9K-C9348GC-FXP • N9K-C93600CD-GX • N9K-C9364C-GX

Note

- Unless explicitly called out, LSE represents both LSE and LSE2 and ALE represents both ALE v1 and ALE v2 in the rest of this document.
- The High Policy Profile listed in the following sections is supported only on Cisco Nexus N9K-C93180YC-FX, N9K-C93600CD-GX, and N9K-C9364C-GX switches with 32GB of RAM.
- High IPv4 EP Scale—This profile is recommended to be used only for the ACI border leaf (BL) switches in Multi-Domain (ACI-SDA) Integration. It provides enhanced IPv4 EP and LPM scales specifically for these BLs and has specific hardware requirements.

MAC-based EPG (bare metal)	4,000	N/A

Contracts

Cisco ACI supports two types of compression for policy CAM (content-addressable memory):

- **Bidirectional compression** ensures that bidirectional rules consume a single entry in the policy CAM and is supported starting with Cisco APIC release 3.2(1).
- **Policy TCAM indirection compression** enables multiple contracts to refer to the same filter rules and is supported starting with Cisco APIC release 4.0(1).

If you enable compression in release 4.0(1) or later, APIC will use either or both optimizations depending on the configuration. When enabling compression on -EX switches, APIC will apply bidirectional compression. The policy TCAM compression feature requires -FX leaf switches or newer.

Cisco Cloud APIC Scalability Limits

This section contains scalability numbers for Cisco ACI cloud deployments. The scalability limits differ based on whether it's a single cloud site or a multi-cloud deployment.

Single Cloud Site

This section contains scalability numbers for a single cloud site deployment. The same scale numbers apply to both, AWS or Azure, cloud providers.

Table 3: Single Cloud Site

Configurable Options	Scale
Number of Tenants	20
Number of Application Profiles	500
Number of EPGs	500
Number of cloud Endpoints	1,000
Number of VRFs	20
Cloud Context Profiles	40
Number of Contracts	1,000
Number of L4-L7 Service Graphs	200

Configurable Options	Scale
Number of L4-L7 Services Devices (AWS ALB)	100
Number of hub networks for Transit Gateway (TGW)	2
Number of Transit Gateways per hub network	2
Number of restricted domains (security domain with restricted role)	32

Multi-Cloud Deployments

This section contains scalability numbers for multi-cloud deployments. The same scale numbers apply to each cloud site (AWS or Azure) with intersite connectivity provided by the ACI Multi-Site Orchestrator. Total number of stretched and non-stretched objects must not exceed the maximum verified scalability limit for that object.

Table 4: Multi-Cloud Deployments

Configurable Options	Scale
Number of cloud sites	2
Number of managed regions per site	4
Number of CSRs per site	4
Number of CSRs per region	2
Number of Tenants	5
Number of EPGs	250
Number of cloud endpoints	500
Number of VRFs	10
Cloud Context Profiles (VPC/VNET)	40
Number of Contracts	200

Cisco ACI and UCSM Scalability

The following table shows verified scalability numbers for Cisco Unified Computing System with Cisco ACI `ExternalSwitch` app.

Configurable Options	Scale
Number of UCSMs per APIC cluster	12
Number of VMM Domains per UCSM	4
Number of VLANs + PVLAN per UCSM	4,000

Configurable Options	Scale
Number of vNIC Templates per UCSM	16

QoS Scalability Limits

The following table shows QoS scale limits. The same numbers apply for topologies with or without remote leafs as well as with COS preservation and MPOD policy enabled.

QoS Mode	QoS Scale
Custom QoS Policy with DSCP	7
Custom QoS Policy with DSCP and Dot1P	7
Custom QoS Policy with Dot1P	38
Custom QoS Policy via a Contract	38

PTP Scalability Limits

The following table shows Precision Time Protocol (PTP) scale limits.

Configurable Options	Scale (IEEE 1588 Default Profile)	Scale (AES67, SMPTE-2059-2)
Number of leaf switches connected to a single spine with PTP globally enabled	128	40
Number of ACI switches connected to the same tier-1 leaf switch (multi-tier topology) with PTP globally enabled	16	16
Number of access ports with PTP enabled on a leaf switch	25 **Note** For improved performance on 1G interfaces with N9K-C93108TC-FX3P switches, the maximum number of 1G interfaces should not exceed 10 out of 25	25 **Note** For improved performance on 1G interfaces with N9K-C93108TC-FX3P switches, the maximum number of 1G interfaces should not exceed 10 out of 25
Number of PTP peers per access port	PTP Mode Multicast (Dynamic/Master): 2 peers PTP Mode Unicast Master: 1 peer	PTP Mode Multicast (Dynamic/Master): 2 peers PTP Mode Unicast Master: 1 peer
Number of PTP peers per leaf switch	26	26

NetFlow Scale

Configurable Options	Scale
Exporters per leaf switch	2
NetFlow monitor policies under BDs per leaf switch	100
NetFlow monitor policies under L3Outs per leaf switch	120
Maximum number of records per collect interval	20,000
