## Configuring LLDP

### Before you begin

Ensure that the Link Layer Discovery Protocol (LLDP) feature is enabled on the switch.

### SUMMARY STEPS

1. switch# **configure terminal**
2. switch# **feature lldp**
3. switch(config)# **lldp** {**holdtime** *seconds* | **reinit** *seconds* | **timer** *seconds* | **tlv-select** {**dcbxp** | **management-address** | **power management** | **port-description** | **port-vlan** | **system-capabilities** | **system-description** | **system-name**}}
4. switch(config)# **no lldp** {**holdtime** | **reinit** | **timer**}
5. (Optional)switch# **show lldp**

### DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	switch# <b>configure terminal</b>	Enters global configuration mode.
<b>Step 2</b>	switch# <b>feature lldp</b>	Enable LLDP.
<b>Step 3</b>	switch(config)# <b>lldp</b> { <b>holdtime</b> <i>seconds</i>   <b>reinit</b> <i>seconds</i>   <b>timer</b> <i>seconds</i>   <b>tlv-select</b> { <b>dcbxp</b>   <b>management-address</b>   <b>power management</b>   <b>port-description</b>   <b>port-vlan</b>   <b>system-capabilities</b>   <b>system-description</b>   <b>system-name</b> }}	Configures LLDP options. Use the <b>holdtime</b> option to set the length of time (10 to 255 seconds) that a device should save LLDP information received before discarding it. The default value is 120 seconds.

	Command or Action	Purpose
		<p>Use the <b>reinit</b> option to set the length of time (1 to 10 seconds) to wait before performing LLDP initialization on any interface. The default value is 2 seconds.</p> <p>Use the <b>timer</b> option to set the rate (5 to 254 seconds) at which LLDP packets are sent. The default value is 30 seconds.</p> <p>Use the <b>tlv-select</b> option to specify the type length value (TLV). The default is enabled to send and receive all TLVs.</p> <p>Use the <b>dcbxp</b> option to specify the Data Center Ethernet Parameter Exchange (DCBXP) TLV messages.</p> <p>Use the <b>management-address</b> option to specify the management address TLV messages.</p> <p>Use the <b>power management</b> option to specify the power management TLV for LLDP.</p> <p>Use the <b>port-description</b> option to specify the port description TLV messages.</p> <p>Use the <b>port-vlan</b> option to specify the port VLAN ID TLV messages.</p> <p>Use the <b>system-capabilities</b> option to specify the system capabilities TLV messages.</p> <p>Use the <b>system-description</b> option to specify the system description TLV messages.</p> <p>Use the <b>system-name</b> option to specify the system name TLV messages.</p>
<b>Step 4</b>	switch(config)# <b>no lldp {holdtime   reinit   timer}</b>	Resets the LLDP values to their defaults.
<b>Step 5</b>	(Optional)switch# <b>show lldp</b>	Displays LLDP configurations.

### Example

This example shows how to configure the global LLDP hold time to 200 seconds:

```
switch# configure terminal
switch(config)# lldp holdtime 200
switch(config)#
```

This example shows how to enable LLDP to send or receive the management address TLVs:

```
switch# configure terminal
switch(config)# lldp tlv-select management-address
switch(config)#
```

# Configuring Interface LLDP

## SUMMARY STEPS

1. switch# **configure terminal**
2. switch(config)# **interface** *type slot/port*
3. switch(config-if)# **[no] lldp {receive | transmit}**
4. (Optional) switch# **show lldp {interface | neighbors [detail | interface | system-detail] | timers | traffic}**

## DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	switch# <b>configure terminal</b>	Enters global configuration mode.
<b>Step 2</b>	switch(config)# <b>interface</b> <i>type slot/port</i>	Selects the interface to change.
<b>Step 3</b>	switch(config-if)# <b>[no] lldp {receive   transmit}</b>	Sets the selected interface to either receive or transmit. The <b>no</b> form of the command disables the LLDP transmit or receive.
<b>Step 4</b>	(Optional) switch# <b>show lldp {interface   neighbors [detail   interface   system-detail]   timers   traffic}</b>	Displays LLDP configurations.

### Example

This example shows how to set an interface to transmit LLDP packets:

```
switch# configure terminal
switch(config)# interface ethernet 1/2
switch(config-if)# lldp transmit
```

This example shows how to configure an interface to disable LLDP:

```
switch# configure terminal
switch(config)# interface ethernet 1/2
switch(config-if)# no lldp transmit
switch(config-if)# no lldp receive
```

This example shows how to display LLDP interface information:

```
switch# show lldp interface ethernet 1/2
tx_enabled: TRUE
rx_enabled: TRUE
dcbx_enabled: TRUE
Port MAC address:    00:0d:ec:a3:5f:48
Remote Peers Information
```

No remote peers exist

This example shows how to display LLDP neighbor information:

```
switch# show lldp neighbors
Capability codes:
  (R) Router, (B) Bridge, (T) Telephone, (C) DOCSIS Cable Device
  (W) WLAN Access Point, (P) Repeater, (S) Station, (O) Other

MTC-CR2             Eth1/48        120        BR          Ethernet1/44
Total entries displayed: 9
```

This example shows how to display the system details about LLDP neighbors:

```
switch# sh lldp neighbors system-detail
Capability codes:
  (R) Router, (B) Bridge, (T) Telephone, (C) DOCSIS Cable Device
  (W) WLAN Access Point, (P) Repeater, (S) Station, (O) Other
Device ID Local Intf Chassis ID PortID Hold-time Capability
switch-2 Eth1/7 0005.73b7.37ce Eth1/7 120 B
switch-3 Eth/9 0005.73b7.37d0 Eth1/9 120 B
switch-4 Eth1/10 0005.73b7.37d1 Eth1/10 120 B
Total entries displayed: 3
```

This example shows how to display LLDP timer information:

```
switch# show lldp timers
LLDP Timers
holdtime 120 seconds
reinit 2 seconds
msg_tx_interval 30 seconds
```

This example shows how to display information about LLDP counters:

```
switch# show lldp traffic
LLDP traffic statistics:

Total frames out: 8464
Total Entries aged: 6
Total frames in: 6342
Total frames received in error: 2
Total frames discarded: 2
Total TLVs unrecognized: 0
```
