Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table at the end of this module.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Information About IPv6 Multicast: Bandwidth-Based Call Admission Control

Bandwidth-Based CAC for IPv6 Multicast

The bandwidth-based call admission control (CAC) for IPv6 multicast feature implements a way to count per-interface mroute state limiters using cost multipliers. This feature can be used to provide bandwidth-based CAC on a per-interface basis in network environments where the multicast flows use different amounts of bandwidth.

This feature limits and accounts for IPv6 multicast state in detail. When this feature is configured, interfaces can be limited to the number of times they may be used as incoming or outgoing interfaces in the IPv6 multicast PIM topology.

With this feature, device administrators can configure global limit cost commands for state matching access lists and specify which cost multiplier to use when accounting such state against the interface limits. This feature provides the required flexibility to implement bandwidth-based local CAC policy by tuning appropriate cost multipliers for different bandwidth requirements.

Threshold Notification for mCAC Limit

The threshold notification for mCAC limit feature notifies the user when actual simultaneous multicast channel numbers exceeds or fall below a specified threshold percentage. For example, if the mCAC rate limit is set to 50,000,000 and the configured threshold percentage is 80 percent, then the user is notified if the limit exceeds 10,000,000.

How to Implement IPv6 Multicast Bandwidth-Based Call Admission Control

Configuring the Global Limit for Bandwidth-Based CAC in IPv6

Device administrators can configure global limit cost commands for state matching access lists.

SUMMARY STEPS

- 1. enable
- 2. configure terminal
- 3. ipv6 multicast [vrf vrf-name] limit cost access-list cost-multiplier

| | Command or Action | Purpose |
|--------|-------------------------------------|------------------------------------|
| Step 1 | enable | Enables privileged EXEC mode. |
| | Example: Device> enable | • Enter your password if prompted. |
| Step 2 | configure terminal | Enters global configuration mode. |
| | Example: Device# configure terminal | |

| | Command or Action | Purpose |
|--------|--|---|
| Step 3 | ipv6 multicast [vrf vrf-name] limit cost access-list cost-multiplier | Applies a cost to mroutes that match per-interface mroute state limiters in IPv6. |
| | <pre>Example: Device(config) # ipv6 multicast limit cost costlist1 2</pre> | |

Configuring an Access List for Bandwidth-Based CAC in IPv6

In bandwidth-based CAC for IPv6, device administrators can configure global limit cost commands for state matching access lists. Perform this task to configure an access list to configure a state matching access list.

SUMMARY STEPS

- 1. enable
- 2. configure terminal
- 3. ipv6 access-list access-list-name
- **4.** Use one of the following:
 - permit
 - deny

| | Command or Action | Purpose |
|--------|---|---|
| Step 1 | enable | Enables privileged EXEC mode. |
| | Example: Device> enable | • Enter your password if prompted. |
| Step 2 | configure terminal | Enters global configuration mode. |
| | Example: Device# configure terminal | |
| Step 3 | ipv6 access-list access-list-name | Defines an IPv6 access list and places the device in IPv6 access list configuration mode. |
| | <pre>Example: Device(config) # ipv6 access-list costlist1</pre> | |
| Step 4 | Use one of the following: | Sets conditions for an IPv6 access list. |
| | • permit | |

| Command or Action | Purpose |
|---|---------|
| • deny | |
| | |
| Example: Device(config) # permit any ff03::1/64 Device(config_# deny any ff03::1/64 | |

Configuring the Interface Limit for Bandwidth-Based CAC in IPv6

Bandwidth-based CAC for IPv6 counts per-interface IPv6 mroute states using cost multipliers. With this feature, device administrators can specify which cost multiplier to use when accounting such state against the interface limits.

SUMMARY STEPS

- 1. enable
- 2. configure terminal
- 3. configure terminal
- 4. interface type number
- **5. ipv6 address** [*ipv6-address | prefix-length | prefix-name sub-bits | prefix-length*]
- 6. ipv6 multicast limit [connected / rpf | out] limit-acl max

| | Command or Action | Purpose |
|--------|---|--|
| Step 1 | enable | Enables privileged EXEC mode. |
| | Example: Device> enable | • Enter your password if prompted. |
| Step 2 | configure terminal | Enters global configuration mode. |
| | Example: Device# configure terminal | |
| Step 3 | configure terminal | Enters global configuration mode. |
| | Example: Device# configure terminal | |
| Step 4 | interface type number | Specifies an interface type and number, and places the device in interface configuration mode. |
| | <pre>Example: Device(config) # interface FastEthernet 1/3</pre> | |

| | Command or Action | Purpose |
|--------|---|---|
| Step 5 | <pre>ipv6 address [ipv6-address / prefix-length prefix-name sub-bits / prefix-length]</pre> | Configures an IPv6 address based on an IPv6 general prefix. |
| | <pre>Example: Device(config-if)# ipv6 address FE80::40:1:3 link-local</pre> | |
| Step 6 | ipv6 multicast limit [connected / rpf out] limit-acl max | Configures per-interface mroute state limiters in IPv6. |
| | <pre>Example: Device(config-if)# ipv6 multicast limit out acl1 10</pre> | |

Configuring the Threshold Notification for the mCAC Limit in IPv6

SUMMARY STEPS

- 1. enable
- 2. configure terminal
- 3. ipv6 multicast limit rate rate-value
- **4. interface** *type number*
- **5.** ipv6 multicast limit [connected | rpf | out] limit-acl max [threshold threshold-value]

| | Command or Action | Purpose |
|--------|---|--|
| Step 1 | enable | Enables privileged EXEC mode. |
| | Example: | • Enter your password if prompted. |
| | Device> enable | |
| Step 2 | configure terminal | Enters global configuration mode. |
| | Example: | |
| | Device# configure terminal | |
| Step 3 | ipv6 multicast limit rate rate-value | Configures the maximum allowed state on the source device. |
| | Example: | |
| | Device(config)# ipv6 multicast limit rate 2 | |
| | I | |

| | Command or Action | Purpose |
|--------|--|--|
| Step 4 | interface type number | Specifies an interface type and number, and places the device in interface configuration mode. |
| | Example: | |
| | Device(config)# interface GigabitEthernet 1/3/1 | |
| Step 5 | ipv6 multicast limit [connected rpf out] limit-acl max [threshold threshold-value] | Configures per-interface mroute state limiters in IPv6. |
| | Example: | |
| | Device (config-if)# ipv6 multicast limit out acl1 10 threshold 20 | |

Configuration Examples for IPv6 Multicast Bandwidth-Based Call Admission Control

Example: Configuring the Global Limit for Bandwidth-Based CAC

The following example configures the global limit on the source device.

ipv6 multicast limit cost cost-list 2

Example: Configuring an Access List for Bandwidth-Based CAC in IPv6

The following example shows how to configure an access list to use for bandwidth-based CAC:

ipv6 access-list cost-list
 permit any ff03::1/64

Example: Configuring the Interface Limit for Bandwidth-Based CAC in IPv6

The following example configures the interface limit on the source device's outgoing interface Ethernet 1/3.

interface Ethernet1/3
ipv6 address FE80::40:1:3 link-local
 ipv6 address 2001:DB8:1:1:3/64
 ipv6 multicast limit out acl1 10

Feature Information for IPv6 Multicast: Bandwidth-Based Call Admission Control

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Table 1: Feature Information for IPv6 Multicast: Bandwidth-Based Call Admission Control

| Feature Name | Releases | Feature Information |
|--|---|--|
| IPv6 Multicast: Bandwidth-Based Call Admission Control | 12.2(40)SG 3.2.0SG 15.0(2)SG 12.2(33)SRE Cisco IOS XE Release 2.6 15.0(1)S | This feature can be used to provide bandwidth-based CAC on a per-interface basis in network environments where the multicast flows use different amounts of bandwidth. The following commands were introduced or modified: ipv6 access-list, ipv6 address, ipv6 multicast limit, ipv6 multicast limit cost. |
| mCAC enhancement: configurable treshold notification for mCAC limits | Cisco IOS XE Release 2.6 | This feature enables system notifications when actual simultaneous multicast channel numbers exceeds or fall below some percentage (called threshold percantage). The following command were introduced or modified by this feature: ipv6 multicast limit, ipv6 multicast limit rate. |
