## set metric (EIGRP)

To set the metric value for Enhanced Interior Gateway Routing Protocol (EIGRP) in a route map, use the **set metric** route-map configuration command. To return to the default metric value, use the **no** form of this command.

set metric bandwidth delay reliability loading mtu no set metric bandwidth delay reliability loading mtu

Syntax Description	bandwidth	Metric value or EIGRP bandwidth of the route in kbps. The range is from 0 to 4294967295.
	delay	Route delay (in tens of microseconds). It can be in the range from 0 to 4294967295.
	reliability	Likelihood of successful packet transmission expressed as a number from 0 to 255. The value 255 means 100 percent reliability; 0 means no reliability.
	loading	Effective bandwidth of the route expressed as a number from 0 to 255 (255 is 100 percent loading).
	mtu	Minimum maximum transmission unit (MTU) size of the route, in bytes. It can be in the range from 0 to 4294967295.

**Command Default** No metric will be set in the route map.

**Command Modes** Route-map configuration (config-route-map)

Command History	Release	Modification
	10.0	This command was introduced.
	12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
	Cisco IOS XE Release 2.1	This command was integrated into Cisco IOS XE Release 2.1.
	12.2SX	This command is supported in the Cisco IOS Release 12.2SX train. Support in a specific 12.2SX release of this train depends on your feature set, platform, and platform hardware.
	12.2(33)XNE	This command was integrated into Cisco IOS Release 12.2(33)XNE.

#### **Usage Guidelines**

We recommend you consult your Cisco technical support representative before changing the default value.

Use the **route-map** global configuration command, and the **match** and **set** route-map configuration commands, to define the conditions for redistributing routes from one routing protocol into another. Each **route-map** command has a list of **match** and **set** commands associated with it. The **match** commands specify the *match criteria*--the conditions under which redistribution is allowed for the current **route-map**command. The **set** commands specify the *set actions*--the particular redistribution actions to perform if the criteria enforced by the **match** commands are met. The **no route-map** command deletes the route map.

The **set** route-map configuration commands specify the redistribution *set actions* to be performed when all of the match criteria for a router are met. When all match criteria are met, all set actions are performed.

### Examples

The following example sets the bandwidth to 10,000, the delay to 10, the reliability to 255, the loading to 1, and the MTU to 1500:

Router(config-route-map) # set metric 10000 10 255 1 1500

# set tag (IP)

To set a tag value for a route in a route map, use the **set tag** command in route-map configuration mode. To delete the entry, use the **no** form of this command.

set tag {tag-valuetag-value-dotted-decimal}
no set tag {tag-valuetag-value-dotted-decimal}

Syntax Description	tag-value	Route tag value in plain decimals. The range is from 0 to 4294967295.			
	tag-value-dotted-decimal	Route tag value in dotted decimals. The range is from 0.0.0.0 to 255.255.255.255.			
Command Default	Routes are not tagged.				
Command Modes	Route-map configuration (c	onfig-route-map)			
Command History	Release	Modification			
	10.0	This command was introduced.			
	12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.			
	12.2SX	This command is supported in the Cisco IOS Release 12.2SX train. Support in a specific 12.2SX release of this train depends on your feature set, platform, and platform hardware.			
	Cisco IOS XE Release 2.1 This command was implemented on Cisco ASR 1000 Series Aggregation Services Routers.				
	15.2(2)SThis command was modified. This command was integrated into Cisco IOS Release 15.2(2)S and the <i>tag-value-dotted-decimal</i> argument was added to support tag values in dotted-decimal format.				
	Cisco IOS XE Release 3.6S This command was modified. The <i>tag-value-dotted-decimal</i> argument was added to support tag values in dotted-decimal format.				
Usage Guidelines	values attached to routes. Yo route maps to filter routes. T	set an administrative tag for a route within a route map. Route tags are 32-bit ou can set tag values as plain decimals or dotted decimals. Route tags are used by The tag value has no impact on routing decisions. It is used to mark or flag route en routes are redistributed between routing protocols.			
Examples	The following example show	ws how to set the tag value of the destination routing protocol to 5:			
	Device(config)# <b>route-map tag</b> Device(config-route-map)# <b>set tag 5</b>				
	The following example shows how to set the tag value in the dotted-decimal format:				

I

Device(config)# route-map tag Device(config-route-map)# set tag 10.10.10.10

Rela	ated	Commands

Command	Description
match tag	Filters routes that match specific route tags.
route-map (IP)	Defines conditions for redistributing routes from one routing protocol into another, or enables policy routing.
set automatic-tag	Automatically computes the tag value.

# show eigrp address-family accounting

To display prefix accounting information for Enhanced Interior Gateway Routing Protocol (EIGRP) processes, use the **show eigrp address-family accounting** command in user EXEC or privileged EXEC mode.

show eigrp address-family {ipv4 | ipv6} [vrf vrf-name] [autonomous-system-number] [multicast]
accounting

Syntax Description	ipv4	Selects the IPv4	Selects the IPv4 protocol address family.         Selects the IPv6 protocol address family.         (Optional) Displays information about the specified VRF. This keyword/argument pair is available only for IPv4 configurations.			
	ipv6	Selects the IPv6				
	vrf vrf-name					
	autonomous-system- numb	er (Optional) Auto	nomous s	ystem nun	nber.	
	multicast	(Optional) Disp	lays infor	mation abo	out multicast inst	ances.
Command Modes	User EXEC (>) Privileged	EXEC (#)				
Command Default	Prefix accounting informati	on for all EIGRP pro	ocesses is	displayed.		
Command History	Release	Modification				
	15.0(1)M	This command was introduced.				
	12.2(33)SRE	This command was integrated into Cisco IOS Release 12.2(33)SRE.				2.2(33)SRE.
	12.2(33)XNEThis command was integrated into Cisco IOS Release 12.2(33)XNE.					2.2(33)XNE.
	Cisco IOS XE Release 2.5 This command was integrated into Cisco IOS XE Release 2.5.					
Usage Guidelines	This command can be used autonomous-system (AS) co		on about H	EIGRP nar	ned configuration	ns and EIGRP
	This command displays the same information as the <b>show ip eigrp accounting</b> command. Cisco recommends using the <b>show eigrp address-family accounting</b> command.					
Examples	The following example sho autonomous-system 22:	ws how to display E	IGRP pref	fix account	ting information	for
	Router# show eigrp address-family ipv4 22 accounting					
	EIGRP-IPv4 VR(saf) Acco	-			-Down	
	Total Prefix Count: 3 State Address/Source	Interface	Prefix	Restart	Restart/	
		Interface	-	-		

The table below describes the significant fields shown in the display.

Table 1: show eigrp address-family accounting Field Descriptions

Field	Description		
IP-EIGRP accounting for AS	Identifies the EIGRP instance, AS number, router ID, and table ID.		
Total Prefix Count	Number of distinct prefixes that are present in this autonomous system.		
State	State of the given neighbor: Adjacency, Pending, or Down.		
Address/Source	IP address of the neighbor.		
Interface	Interface on which the neighbor is connected.		
Prefix Count	Number of prefixes that are advertised by this neighbor.		
Restart Count	Number of times this neighbor has been restarted due to exceeding prefix limits.		
Restart/Reset(s)	Time remaining until the neighbor will be restarted (if in Pending state) or until the restart count will be cleared (if in Adjacency state.)		

### **Related Commands**

Command	Description
show eigrp address-family events	Displays information about EIGRP events.
show eigrp address-family interfaces	Displays information about interfaces configured for EIGRP.
show eigrp address-family neighbors	Displays the neighbors discovered by EIGRP.
show eigrp address-family sia-event	Displays information about EIGRP SIA events.
show eigrp address-family sia-statistics	Displays information about EIGRP SIA statistics.
show eigrp address-family timers	Displays information about EIGRP timers and expiration times.
show eigrp address-family topology	Displays entries in the EIGRP topology table.
show eigrp address-family traffic	Displays the number of EIGRP packets sent and received.

## show eigrp address-family events

To display information about Enhanced Interior Gateway Routing Protocol (EIGRP) address-family events, use the **show eigrp address-family events** command in user EXEC or privileged EXEC mode.

show eigrp address-family {ipv4 | ipv6} [vrf vrf-name] [autonomous-system-number] [multicast]
events [starting-event-number ending-event-number] [errmsg [starting-event-number
ending-event-number]] [sia [starting-event-number ending-event-number]] [type]

	-				
Syntax Description	ipv4	Selects the IPv4 protocol address family.			
	ipv6	Selects the IPv6 protocol address family.			
	vrf vrf-name	(Optional) Displays information about the specified VRF.			
	autonomous-system- num	<i>ber</i> (Optional) Autonomous system number.			
	multicast	(Optional) Displays information about multicast instances.			
	starting-event-number	(Optional) Number of first event to display.			
	ending-event-number	(Optional) Number of last event to display.			
	errmsg	(Optional) Displays error message events.			
	sia	(Optional) Displays Stuck in Active (SIA) events.			
	type	(Optional) Displays the types of events being logged.			
Command Modes	User EXEC (>) Privileged	EXEC (#)			
Command Default	All EIGRP address-family	events are displayed.			
Command History	Release Modification				
	15.0(1)M	This command was introduced.			
	12.2(33)SRE	This command was integrated into Cisco IOS Release 12.2(33)SRE.			
	12.2(33)XNE	This command was integrated into Cisco IOS Release 12.2(33)XNE.			
	Cisco IOS XE Release 2.5	This command was integrated into Cisco IOS XE Release 2.5.			
Usage Guidelines	The event log is used by Ci to a particular address fam	sco technical support to display a history of EIGRP internal events that are specific ily.			
	To display information about EIGRP service-family events, use the <b>show eigrp service-family events</b> command.				
	This command can be used to display information about EIGRP named configurations and EIGRP autonomous-system (AS) configurations.				

This command displays the same information as the **show ip eigrp events** command. Cisco recommends using the **show eigrp address-family events** command.

```
Examples
```

The following example shows how to display EIGRP address-family events for autonomous-system 3:

Router# show eigrp address-family ipv4 3 events
Event information for AS 3:
1 15:37:47.015 Change queue emptied, entries: 1
2 15:37:47.015 Metric set: 10.0.0.0/24 307200
3 15:37:47.015 Update reason, delay: new if 4294967295
4 15:37:47.015 Update sent, RD: 10.0.0.0/24 4294967295
5 15:37:47.015 Update reason, delay: metric chg 4294967295
6 15:37:47.015 Update sent, RD: 10.0.0.0/24 4294967295
7 15:37:47.015 Route installed: 10.0.0.0/24 1.1.1.2
8 15:37:47.015 Route installing: 10.0.0.0/24 10.0.1.2

Related Commands	Command	Description	
	show eigrp address-family accounting	Displays prefix accounting information for EIGRP processes.	
	show eigrp address-family interfaces	Displays information about interfaces configured for EIGRP.	
	show eigrp address-family neighbors	Displays the neighbors discovered by EIGRP.	
	show eigrp address-family sia-event	Displays information about EIGRP SIA events.	
	show eigrp address-family sia-statistics	Displays information about EIGRP SIA statistics.         Displays information about EIGRP timers and expiration times.	
	show eigrp address-family timers		
	show eigrp address-family topology	Displays entries in the EIGRP topology table.	
	show eigrp address-family traffic	Displays the number of EIGRP packets sent and received.	
	show eigrp service-family events	Displays information about EIGRP service-family events.	

# show eigrp address-family interfaces

To display information about interfaces that are configured for Enhanced Interior Gateway Routing Protocol (EIGRP), use the **show eigrp address-family interfaces** command in user EXEC or privileged EXEC mode.

**show eigrp address-family** {**ipv4** | **ipv6**} [**vrf** *vrf-name*] [*autonomous-system-number*] [**multicast**] **interfaces** [**detail**] [*interface-type interface-number*]

Syntax Description	ipv4	Selects the IPv4 protocol address family.		
	ipv6	Selects the IPv6 protocol address family.		
	vrf vrf-name	(Optional) Displays information about the specified VPN routing and forwarding (VRF).		
	autonomous-system- numb	ber (Optional) Autonomous system number.		
	multicast	(Optional) Displays information about multicast instances.		
	detail	(Optional) Displays detailed information about EIGRP interfaces.		
	interface-type interface-nu	<i>umber</i> (Optional) Interface type and number to display. If not specified, all enabled interfaces are displayed.		
Command Default	Information about all interfa	faces enabled with EIGRP is displayed.		
Command Modes	User EXEC (>)			
	Privileged EXEC (#)			
Command History	Release	Modification		
	15.0(1)M	This command was introduced.		
	12.2(33)SRE	This command was integrated into Cisco IOS Release 12.2(33)SRE.		
	12.2(33)XNE	This command was integrated into Cisco IOS Release 12.2(33)XNE.		
	Cisco IOS Release XE 2.5	This command was integrated into Cisco IOS XE Release 2.5.		
	15.2(2)S	This command was modified. The output of the command was enhanced to display information about the state of Bidirectional Forwarding Detection (BF on an interface.		
	15.2(1)E	This command was integrated into Cisco IOS Release 15.2(1)E.		
Usage Guidelines		<b>ss-family interfaces</b> command to determine the interfaces on which EIGRP is information about those interfaces.		
	If an autonomous system is s Otherwise, all EIGRP proce	specified, only the routing process for the specified autonomous system is displayed esses are displayed.		

This command can be used to display information about EIGRP named configurations and EIGRP autonomous system (AS) configurations.

This command displays the same information as the **show ip eigrp interfaces** command. Cisco recommends using the **show eigrp address-family interfaces** command.

**Examples** 

The following sample output from the **show eigrp address-family ipv4 4453 interfaces** command displays information about EIGRP interfaces for autonomous system 4453:

Device# show eigrp address-family ipv4 4453 interfaces

EIGRP-IPv4	VR(Virtu	al-name) Addr	ess-fa	mily Neighbors	for AS(4453)	
	Xmit	Queue	Mean	Pacing Time	Multicast	Pending

The following sample output from the **show eigrp address-family ipv6 interfaces detail** command shows how to display information about the state of BFD on an interface:

Device# show eigrp address-family ipv6 interfaces detail

Xmit QueueMeanPacing TimeMulticastPendingInterfacePeersUn/ReliableSRTTUn/ReliableFlow TimerRoutesLo100/00/10000Hello-interval is 5 secNext xmit serial <none>BFD is enabled

The table below describes the significant fields shown in the sample displays.

Table 2: show eigrp address-family interfaces Field Descriptions

Field	Description
Interface	Interface over which EIGRP is configured.
Peers	Number of EIGRP neighbors connected on this interface.

Field	Description
Xmit Queue Un/Reliable	Number of packets remaining in the unreliable and reliable transmit queues.
Mean SRTT	Mean smooth round-trip time interval (SRTT), in milliseconds.
Pacing Time Un/Reliable	Pacing time used to determine when reliable and unreliable EIGRP packets should be sent out of the interface.
Multicast Flow Timer	Maximum time (in seconds) for which the device sends multicast EIGRP packets.
Pending Services	Number of services in the packets in the transmit queue waiting to be sent.
Pending Routes	Number of available routes in the packets in the transmit queue waiting to be sent.
CR packets	Packets marked for conditional receive.

### **Related Commands**

Command	Description
show eigrp address-family accounting	Displays prefix accounting information for EIGRP processes.

#### **Usage Guidelines**

Use the **show eigrp address-family neighbors** command to determine when neighbors become active and inactive. The command is also useful for debugging certain types of transport problems.

This command can be used to display information about EIGRP named configurations and EIGRP autonomous system configurations.

This command displays the same information as the **show ip eigrp neighbors** command. We recommend that you use the **show eigrp address-family neighbors** command.

**Examples** 

The following sample output from the **show eigrp address-family ipv4 4453 neighbors** command shows how to display neighbors that are discovered by EIGRP:

#### Device# show eigrp address-family ipv4 4453 neighbors

EIGRP-IPv4 VR(Virtual-name) Address-family Neighbors for AS(4453) Address Interface Hold Uptime SRTT RTO Q Seq (ms) (ms) Cnt Num (sec) 13 0:00:41 0 11 4 172.16.81.28 Ethernet1 20 14 0:02:01 0 172.16.80.28 Ethernet0 10 12 24 172.16.80.31 Ethernet0 12 0:02:02 0 4 5 20

The following sample output from the **show eigrp address-family ipv4 neighbors detail** command shows how to display detailed information about neighbors that are discovered by EIGRP, including whether a neighbor has been restarted:

```
Device# show eigrp address-family ipv4 neighbors detail
```

EIGRP-IPv4 VR(test) Address-family Neighbors for AS(3) H Address Interface Hold Uptime SRTT RTO Q Seq (sec) (ms) (ms) Cnt Num Ethernet1130:00:410114Ethernet0140:02:0101012 4 172.16.81.28 20 172.16.80.28 2.4 172.16.80.31 Ethernet0 12 0:02:02 0 4 5 20

The table below describes the significant fields shown in the sample displays:

Field	Description
AS(4453)	Autonomous system number specified in the configuration command, for example 4453.
Address	IP address of the peer.
Interface	Interface on which the device is receiving hello packets from the peer.
Hold	Duration (seconds) for which the device will wait to hear from the peer before declaring it down. If the default hold time is specified, the hold time value will be less than 15. If a nondefault hold time is specified, the hold time value is displayed.
Uptime	Elapsed time (in seconds) since the local device first heard from this neighbor.
SRTT	Smooth round-trip time (SRTT). Duration (milliseconds) for which an EIGRP packet requires to be sent to its neighbor and for the local device to receive an acknowledgment of that packet.
RTO	Retransmission timeout (RTO). Duration (milliseconds) for which EIGRP waits before retransmitting a packet from the retransmission queue to a neighbor.
Q Cnt	Number of packets (update, query, and reply) that the software is waiting to send.
Seq Num	Sequence number of the last update, query, or reply packet that was received from this neighbor.
Time since Restart	Time elapsed since a neighbor has been restarted.

### Table 3: show eigrp address-family neighbors Field Descriptions

<b>Related Commands</b>	Command	Description

	show eigrp address-family events	Displays information about EIGRP events.
	show eigrp address-family interfaces	Displays information about interfaces configured for EIGRP.
	show eigrp address-family sia-event	Displays information about EIGRP SIA events.
	show eigrp address-family sia-statistics	Displays information about EIGRP SIA statistics.
	show eigrp address-family timers	Displays information about EIGRP timers and expiration times.
	show eigrp address-family topology	Displays entries in the EIGRP topology table.
	show eigrp address-family traffic	Displays the number of EIGRP packets sent and received.

# show eigrp address-family timers

To display information about Enhanced Interior Gateway Routing Protocol (EIGRP) timers and expiration times, use the **show eigrp address-family timers** command in user EXEC or privileged EXEC mode.

show eigrp address-family {ipv4 | ipv6} [vrf vrf-name] [autonomous-system-number] [multicast]
timers

Syntax Description	ipv4	Selects the IPv4 protocol address family.	
	ipv6	Selects the IPv6 protocol address family.	
	vrf vrf-name	(Optional) Displays information about the specified VRF.	
	autonomous-system- numb	er (Optional) Autonomous system number.	
	multicast	(Optional) Displays information about multicast instances.	
Command Default	fault Information about all EIGRP timers is displayed.		
Command Modes	User EXEC (>) Privileged	EXEC (#)	
Command History	Release	Modification	
	15.0(1)M	This command was introduced.	
	12.2(33)SRE	This command was integrated into Cisco IOS Release 12.2(33)SRE.	
	12.2(33)XNE	This command was integrated into Cisco IOS Release 12.2(33)XNE.	
	Cisco IOS XE Release 2.5	This command was integrated into Cisco IOS XE Release 2.5.	
Usage Guidelines	This command is useful for debugging and troubleshooting by Cisco technical support, but it is not intended for normal EIGRP administration tasks. This command should not be used without guidance from Cisco technical support.		
This command can be used to display information about EIGRP named configurations and EIC autonomous-system (AS) configurations.			
	This command displays the same information as the <b>show ip eigrp timers</b> command. Cisco recommend the <b>show eigrp address-family timers</b> command.		
Examples	The following example shows how to display information about EIGRP timers:		
		ress-family ipv4 4453 timers Name) Address-family Timers for AS(4453)	

Expiration Type | 14.984 (parent) | 14.984 (parent) | 14.984 Peer holding SIA Process Expiration Type for Topo(base) | 0.000 (parent)

### **Related Commands**

Command	Description
show eigrp address-family accounting	Displays prefix accounting information for EIGRP processes.
show eigrp address-family events	Displays information about EIGRP events.
show eigrp address-family interfaces	Displays information about interfaces configured for EIGRP.
show eigrp address-family neighbors	Displays the neighbors discovered by EIGRP.
show eigrp address-family sia-event	Displays information about EIGRP SIA events.
show eigrp address-family sia-statistics	Displays information about EIGRP SIA statistics.
show eigrp address-family topology	Displays entries in the EIGRP topology table.
show eigrp address-family traffic	Displays the number of EIGRP packets sent and received.

# show eigrp address-family topology

To display Enhanced Interior Gateway Routing Protocol (EIGRP) address-family topology table entries, use the **show eigrp address-family topology** command in user EXEC or privileged EXEC mode.

#### show eigrp address-family

{ipv4 [{multicast | vrf vrf-name}] | ipv6 [{vrf vrf-name}]} [{autonomous-system-number}]
topology [{topology-name [{accounting | events [{[{errmsg | sia}] [{reverse}] [{starting-event-number
ending-event-number}] | type}]}] | ip-address [{mask}]ip-prefix | active | all-links | detail-links | pending
| route-type {connected | external | internal | local | redistributed | summary | vpn} | summary |
zero-successors}]

Syntax Description	ipv4	Displays information about IPv4 address-family topologies.	
	multicast	(Optional) Displays information about IPv4 multicast instances.	
	vrf vrf-name	(Optional) Displays information about the specified virtual routing and forwarding (VRF) instance.	
	ipv6	Displays information about IPv6 address-family topologies.	
	autonomous-system-number	(Optional) Autonomous system number. The valid range is from 1 to 65535.	
	topology	(Optional) Displays information about EIGRP topology tables.	
	topology-name	(Optional) Name of the EIGRP topology table.	
	accounting	(Optional) Displays information about prefix accounting.	
	events	(Optional) Displays events log.	
	errmsg	(Optional) Displays error message events.	
	sia	(Optional) Displays stuck-in-active (SIA) events.	
	reverse	(Optional) Changes the order in which the event log is displayed.	
	starting-event-number	(Optional) Number of the first event that is displayed.	
	ending-event-number	(Optional) Number of the last event that is displayed.	
	type	(Optional) Displays the types of events that are being logged.	
	ip-address	(Optional) IP address. When the IP address is specified with a mask, a detailed description of the entry is provided.	
	mask	(Optional) Network mask.	
	ip-prefix	(Optional) IP prefix in the format <network>/<length>; for example, 192.168.0.0/16.</length></network>	
	active	(Optional) Displays only active entries in the EIGRP topology table.	

	all-links	(Optional) Displays all entries in the EIGRP topology table (including nonfeasible-successor sources).
	detail-links	(Optional) Displays detailed information about all entries in the topology table.
	pending	(Optional) Displays all entries in the EIGRP topology table that are either waiting for an update from a neighbor or waiting to reply to a neighbor.
	route-type	(Optional) Displays information about services of the specified route type.
	connected	(Optional) Displays information about all connected routes.
	external	(Optional) Displays information about all external routes.
	internal	(Optional) Displays information about all internal routes.
	local	(Optional) Displays information about all locally originated routes.
	redistributed	(Optional) Displays information about all redistributed routes.
	summary	(Optional) Displays information about all summary routes.
	vpn	(Optional) Displays information about all VPN-sourced IPv4 routes.
	summary	(Optional) Displays summary information about the EIGRP topology table.
	zero-successors	(Optional) Displays available routes that have zero successors.
	Default         If this command is used without any arguments or keywords, only routes that are feasible s displayed. This command displays the same information as the show ip eigrp topology conrecommend using the show eigrp address-family topology command.	
Command Default	displayed. This command dis	plays the same information as the <b>show ip eigrp topology</b> command. We

This command was integrated into Cisco IOS XE Release 2.5.

Release	Modification
	This command was modified. The output of the command was enhanced to display route tag values in dotted-decimal format.
15.1(1)SY	This command was integrated into Cisco IOS Release 15.1(1)SY.

Usage Guidelines

This command can be used to display information about EIGRP named and EIGRP autonomous system configurations.

#### **Examples**

The following sample output from the **show eigrp address-family ipv4** *autonomous-system-number* **topology** command displays entries of an IPv4 topology table:

```
Device# show eigrp address-family ipv4 4453 topology
```

```
EIGRP-IPv4 Topology Table for AS(4453)/ID(192.168.10.1)
Codes: P - Passive, A - Active, U - Update, Q - Query, R - Reply,
    r - Reply status
P 172.16.90.0 255.255.255.0, 2 successors, FD is 720896 RIB is 5632
    via 172.16.80.28 (46251776/46226176), Ethernet0
    via 172.16.81.28 (46251776/46226176), Ethernet1
    via 172.16.80.31 (46277376/46251776), Serial0
```

The following sample output from the **show eigrp address-family ipv4** *autonomous-system-number* **topology** *ip-address* command displays EIGRP metrics for specified internal and external services:

Device# show eigrp address-family ipv4 4453 topology 10.10.10.0/24

```
EIGRP-IPv4 VR(virtual-name) Topology Entry for AS(4453)/ID(10.0.0.1) for 10.10.10.0/24
State is Passive, Query origin flag is 1, 1 Successor(s), FD is 128256, RIB is 6543
Descriptor Blocks:
0.0.0.0 (Null0), from Connected, Send flag is 0x0
Composite metric is (128256/0), service is Internal
Vector metric:
    Minimum bandwidth is 10000000 Kbit
    Total delay is 5000 picoseconds
    Reliability is 255/255
    Load is ½55
Minimum MTU is 1514
Hop count is 0
Originating router is 10.0.0.1
```

The table below describes the significant fields shown in the displays.

Table 4: show eigrp address-family topology Field Descriptions

Field	Description
Codes	State of this topology table entry. Passive and Active refer to the EIGRP state with respect to the destination; Update, Query, and Reply refer to the type of packet that is being sent.
P - Passive	Indicates that no EIGRP computations are being performed for this destination.
A - Active	Indicates that EIGRP computations are being performed for this destination.

Field	Description			
U - Update	Indicates that an update packet was sent to this destination.			
Q - Query	Indicates that a query packet was sent to this destination.			
R - Reply	Indicates that a reply packet was sent to this destination.			
r - Reply status	The flag that is set after the software has sent a query and is waiting for a reply.			
successors	Number of successors. This number corresponds to the number of next hops in the IP routing table. If "successors" is capitalized, the route or the next hop is in a transition state.			
FD	Feasible distance. The feasible distance is the best metric to reach the destination or the best metric that was known when the route became active. This metric value is used in the feasibility condition check. If the reported distance of the device is less than the feasible distance, the feasibility condition is met and the route is considered a feasible successor. After the software determines that it has a feasible successor, the software need not send a query for that destination.			
RIB	RIB metric.			
replies	(Not shown in the output.) Number of replies that are still outstanding (have not been received) with respect to this destination. This information appears only when the destination is in active state.			
state	(Not shown in the output) The exact EIGRP state of this destination. It can be the number 0, 1, 2, or 3. This information appears only when the destination is in active state.			
via	IP address of the peer that advertised this destination. The first of these entries is the current successor. Subsequent entries in the list are feasible successors.			
(46251776/46226176)	The first number is the EIGRP metric that represents the cost to the destination. The second number is the EIGRP metric that this peer advertised.			
Ethernet0	The interface from which this information was learned.			

### **Related Commands**

Command	Description
show eigrp address-family accounting	Displays prefix accounting information for EIGRP address-family processes.
show eigrp address-family events	Displays information about EIGRP address-family events.
show eigrp address-family interfaces	Displays information about EIGRP address-family interfaces.
show eigrp address-family neighbors	Displays information on EIGRP address-family neighbors.
show eigrp address-family timers	Displays information about EIGRP address-family timers and expiration times.

Command	Description
show eigrp address-family traffic	Displays information about EIGRP packets that are sent and received.

## show eigrp address-family traffic

To display the number of Enhanced Interior Gateway Routing Protocol (EIGRP) packets that are sent and received, use the **show eigrp address-family traffic** command in user EXEC or privileged EXEC mode.

**show eigrp address-family** {**ipv4** | **ipv6**} [**vrf** *vrf-name*] [*autonomous-system-number*] [**multicast**] **traffic** 

Syntax Description	ipv4	Selects the IPv4 protocol address family.			
	ipv6	Selects the IPv6 protocol address family.			
	vrf vrf-name	(Optional) Displays information about the specified VRF.			
	autonomous-system- numb	er (Optional) Autonomous system number.			
	multicast	(Optional) Displays information about multicast instances.			
Command Default	The number of all EIGRP p	ackets sent and received is displayed.			
Command Modes	User EXEC (>) Privileged EXEC (#)				
Command History	Command History Release Modification				
	15.0(1)M	This command was introduced.			
	12.2(33)SRE	SRE This command was integrated into Cisco IOS Release 12.2(33)SRE.			
	12.2(33)XNEThis command was integrated into Cisco IOS Release 12.2(33)XNE.				
	Cisco IOS XE Release 2.5 This command was integrated into Cisco IOS XE Release 2.5.				
Usage Guidelines	This command can be used autonomous-system (AS) co	to display information about EIGRP named configurations and EIGRP onfigurations.			
	This command displays the using the <b>show eigrp addre</b>	same information as the <b>show ip eigrp traffic</b> command. Cisco recommends <b>ss-family traffic</b> command.			
Examples	The following example shows how to display the number of EIGRP packets sent and received for autonomous system number 4453:				
		: 3/1 : 0/0 : 0/0 /3 ived: 0/0			

```
PDM Process ID: 191
Socket Queue: 0/2000/1/0 (current/max/highest/drops)
Input Queue: 0/2000/1/0 (current/max/highest/drops
```

The table below describes the significant fields shown in the display.

Table 5: show eigrp address-family traffic Field Descriptions

Field	Description
Hellos sent/received	Number of hello packets sent and received.
Updates sent/received	Number of update packets sent and received.
Queries sent/received	Number of query packets sent and received.
Replies sent/received	Number of reply packets sent and received.
Acks sent/received	Number of acknowledgement packets sent and received.
SIA-Queries sent/received	Number of stuck in active query packets sent and received.
SIA-Replies sent/received	Number of stuck in active reply packets sent and received.
Hello Process ID	Cisco IOS hello process identifier.
PDM Process ID	Protocol-dependent module IOS process identifier.
Socket Queue	IP to EIGRP Hello Process socket queue counters.
Input Queue	EIGRP Hello Process to EIGRP PDM socket queue counters.

### **Related Commands**

Command	Description
show eigrp address-family accounting	Displays prefix accounting information for EIGRP processes.
show eigrp address-family events	Displays information about EIGRP events.
show eigrp address-family interfaces	Displays information about interfaces configured for EIGRP.
show eigrp address-family neighbors	Displays the neighbors discovered by EIGRP.
show eigrp address-family sia-event	Displays information about EIGRP SIA events.
show eigrp address-family sia-statistics	Displays information about EIGRP SIA statistics.
show eigrp address-family timers	Displays information about EIGRP timers and expiration times.
show eigrp address-family topology	Displays entries in the EIGRP topology table.

# show eigrp plugins

To display general information including the versions of the Enhanced Interior Gateway Routing Protocol (EIGRP) protocol features that are currently running, use the **show eigrp plugins** command in user EXEC or privileged EXEC mode.

show eigrp [vrf vrf-name] [as-number]
plugins [plugin-name][detailed]

Syntax Description	vrf vrf-name	<i>me</i> (Obsolete) (Optional) Specifies a particular VPN routing and forwarding (VRF) instance name.		
	as-number	(Obsolete) (Optional) Autonomous system number.		
	plugin-name	(Optional) Name of an EIGRP plugin to display.		
	Displays detailed information about EIGRP features.			
Command Modes	les User EXEC (>)			
	Privileged EXE	EC (#)		
Command History	Release		Modification	
	12.4(15)T		This command was introduced.	
	12.2(33)SXI		This command was integrated into Cisco IOS Release 12.2(33)SXI.	
	15.0(1)M		This command was modified. The <b>vrf</b> keyword and the <i>vrf-name</i> and the <i>as-number</i> arguments were removed.	
	12.2(33)SRE		This command was modified. The <b>vrf</b> keyword and the <i>vrf-name</i> and <i>as-number</i> arguments were removed.	
	Cisco IOS XE Release 2.5 15.1(3)S		This command was modified. The <b>vrf</b> keyword and the <i>vrf-name</i> and <i>as-number</i> arguments were removed.	
			This command was modified. The output of the command was modified to display information about wide metric.	
	Cisco IOS XE Release 3.4S		This command was modified. The output of the command was modified to display information about wide metric.	
Usage Guidelines	Use the <b>show eigrp plugins</b> command in user EXEC or privileged EXEC mode to determine if a particul EIGRP feature is available in your Cisco IOS image. This command displays a summary of information about EIGRP service families and address families.			
	This command	This command is useful when contacting Cisco technical support.		
Examples	The following example shows how to display EIGRP plugin information:			

### Router# show eigrp plugins

EIGRP feature plugins:::				
		Portable EIGRP Release		
:	6.01.03 :	Source Component Release(snakenavel)		
		+ HMAC-SHA-256 Authentication		
1		EIGRP Parser Support		
igrp2 :	2.00.00 :	Reliable Transport/Dual Database + Wide Metrics		
bfd :	1.01.00 :	BFD Platform Support		
client-simulator :	1.00.01 :	Service Distribution Simulator		
mtr :	1.00.01 :	Multi-Topology Routing(MTR)		
eigrp-pfr :	1.00.01 :	Performance Routing Support + IPv4 PFR		
vNets :	1.00.00 :	vNets Platform Support + IPv4 vNets

ipv6-sf :	2.01.00 :	Service Distribution Support + Dynamic Remote Neighbors + IPv6 VRF		
<pre>snmp-agent :</pre>	1.01.01 :	SNMP/SNMPv2 Agent Support		

The table below describes the significant fields shown in the display.

Table 6: show eigrp plugins Field Descriptions

Field	Description
eigrp release	Portable EIGRP release version.
igrp2	Reliable transport and dual database version.
bfd	EIGRP-BFD feature version.
mtr	EIGRP multitopology routing (MTR) version.
eigrp-pfr	EIGRP performance routing feature version.
ipv4-af	EIGRP IPv4 routing protocol feature version.
ipv4-sf	EIGRP IPv4 service distribution feature version.
external-client	EIGRP service distribution client support feature version.
ipv6-af	EIGRP IPv6 routing protocol feature version.
ipv6-sf	EIGRP IPv6 service distribution feature version.
snmp-agent	EIGRP SNMP and SNMPv2 agent support version.

I

### Related Commands

Command	Description
clear eigrp service-family	Clears entries from the EIGRP neighbor table.
show eigrp service-family external-client	Displays information about the EIGRP service-family external clients.
show eigrp service-family ipv4 topology	Displays information from the EIGRP IPv4 service-family topology table.
show eigrp service-family ipv6 topology	Displays information from the EIGRP IPv6 service-family topology table.
show eigrp tech-support	Generates a report of all EIGRP-related information.

### show eigrp protocols

To display general information about Enhanced Interior Gateway Routing Protocol (EIGRP) protocols that are currently running, use the **show eigrp protocols** command in user EXEC or privileged EXEC mode.

show eigrp protocols [vrf vrf-name]

Syntax Description	<b>vrf</b> vrf-name	(Optional) Displays information about the specified VPN Routing and Forwarding (VRF)
		instance.

Command Modes User EXEC (>)

Privileged EXEC (#)

### Command History Release Modification

ninianu fiistory	nelease	Mounication
	15.0(1)M	This command was introduced.
	12.2(33)SRE	This command was integrated into Cisco IOS Release 12.2(33)SRE.
	Cisco IOS XE Release 2.5	This command was integrated into Cisco IOS XE Release 2.5.
	12.2(33)SXI4	This command was integrated into Cisco IOS Release 12.2(33)SXI4.
	15.1(3)8	This command was modified. The command output was modified to display the relevant wide metric information.
	Cisco IOS XE Release 3.4S	This command was modified. The command output was modified to display the relevant wide metric information.
	15.1(1)SY	This command was modified to display the relevant wide metric information.

**Usage Guidelines** 

**es** Use the **show eigrp protocols** command in user EXEC or privileged EXEC mode to see a summary information on EIGRP IPv4 service families or address families.

**Examples** 

The following example shows how to display general EIGRP information:

Device# show eigrp protocols

```
EIGRP-IPv4 VR(foo) Address-Family Protocol for AS(1)
Metric weight K1=1, K2=0, K3=1, K4=0, K5=0 K6=0
Metric rib-scale 128
Metric version 64bit
NSF-aware route hold timer is 240
Router-ID: 1.1.1.2
Topology : 0 (base)
Active Timer: 3 min
Distance: internal 90 external 170
Maximum path: 4
Maximum hopcount 100
Maximum metric variance 1
```

```
Total Prefix Count: 2
Total Redist Count: 0
```

The following example shows how to display general EIGRP information for VRF1:

#### Device# show eigrp protocols vrf vrf1

```
EIGRP-IPv4 Protocol for AS(5) VRF(vrf1)
Metric weight K1=1, K2=0, K3=1, K4=0, K5=0 K=6
Metric rib-scale 128
Metric version 64bit
NSF-aware route hold timer is 240
Router-ID: 1.1.1.1
Topology : 0 (base)
Active Timer: 3 min
Distance: internal 90 external 170
Maximum path: 4
Maximum hopcount 100
Maximum metric variance 1
Total Prefix Count: 0
Total Redist Count: 0
```

The table below describes the significant fields shown in the display.

#### Table 7: show eigrp protocols Field Descriptions

Field	Description
EIGRP-IPv4 Protocol for AS(1)	EIGRP instance and autonomous system number.
Metric weight	EIGRP metric calculations.
NSF-aware route hold timer	Route-hold timer value for an NSF-aware router.
Router-ID	Router ID.
Topology	Number of entries in the EIGRP topology table.
Active Timer	EIGRP routing active time limit.
Distance	Internal and external administrative distance.
Maximum path	Maximum number of parallel routes that EIGRP can support.
Maximum hopcount	Maximum hop count (in decimal).
Maximum metric variance	Metric variance used to find feasible paths for a route.
Total Prefix Count	Aggregate sum of the prefixes in an EIGRP instance topology table. It includes prefixes learned from all neighbors or from redistribution.
Total Redist Count	Number of prefixes redistributed into an EIGRP process.

### Related Commands

Command	Description
clear eigrp service-family	Clears entries from the EIGRP neighbor table.
show eigrp service-family external-client	Displays information about the EIGRP service-family external clients.
show eigrp service-family ipv4 topology	Displays information from the EIGRP IPv4 service-family topology table.
show eigrp service-family ipv6 topology	Displays information from the EIGRP IPv6 service-family topology table.
show tech-support	Generates a report of all EIGRP-related information.

### show eigrp tech-support

To generate a report of the Enhanced Interior Gateway Routing Protocol (EIGRP) internal state information, use the **show eigrp tech-support** command in privileged EXEC mode.

show eigrp tech-support [detailed]

Syntax Description detailed (Optional) Displays detailed output.

Command Modes Privileged EXEC (#)

Command History	Release	Modification
	12.2(33)SRE	This command was introduced.
	15.0(1)M	This command was integrated into Cisco IOS Release 15.0(1)M.
	Cisco IOS XE Release 2.5	This command was integrated into Cisco IOS XE Release 2.5.
	12.2(33)SXI4	This command was integrated into Cisco IOS Release 12.2(33)SXI4.
	15.1(3)8	This command was modified. The command output was modified to display relevant wide metric information.
	Cisco IOS XE Release 3.4S	This command was modified. The command output was modified to display relevant wide metric information.
	15.1(1)SY	This command was modified. The command output was modified to display relevant wide metric information.

**Usage Guidelines** 

Use the **show eigrp tech-support** command in privileged EXEC mode to display various internal EIGRP states.

## 

**Note** This command is useful for debugging and troubleshooting by Cisco technical support, but it is not intended for normal EIGRP administration tasks. This command should not be used without guidance from Cisco technical support.

**Examples** 

The following is sample output from the **show eigrp tech-support detailed** command:

Device# show eigrp tech-support detailed

Command	Description
show eigrp plugins	Displays general information including the versions of the EIGRP protocol features currently running.

# show ip eigrp accounting

To display prefix accounting information for Enhanced Interior Gateway Routing Protocol (EIGRP) processes, use the **show ip eigrp accounting**command in privileged EXEC mode.

show ip eigrp [vrf {vrf-name | \*}] [autonomous-system-number] accounting

Syntax Description	vrf vrf-name	(Optional) Displays information about the specified VRF.					
•,							
	vrf *	(Optional) Displays information about all VRFs.					
	autonomous-system-numbe	er (Optional) Autonomous system number.					
Command Modes	Privileged EXEC (#)						
Command History	Release	Modification					
	12.0(29)S	This command was introduced.					
	12.3(14)T	12.3(14)T     This command was integrated into Cisco IOS Release 12.3(14)T.					
	15.0(1)MThis command was modified. The vrf, vrf-name, and * keywords and arguments were added. This command replaces the show ip eigrp vrf accounting command.						
	12.2(33)SRE	This command was integrated into Cisco IOS Release 12.2(33)SRE.					
	12.2(33)XNE	This command was integrated into Cisco IOS Release 12.2(33)XNE.					
	Cisco IOS XE Release 2.5 This command was integrated into Cisco IOS XE Release 2.5.						
Usage Guidelines	This command can be used to display information about EIGRP named configurations and EIGRP autonomous-system (AS) configurations.						
	5 ( )

```

#### **Examples**

The table below describes the significant fields shown in the display.

#### Table 8: show ip eigrp accounting Field Descriptions

Field	Description		
EIGRP IPv4 Accounting for AS	· Identifies the EIGRP instance along with the AS number, router ID, and table ID.		
Total Prefix Count	Shows the aggregate sum of the prefixes in an EIGRP instance topology table. It includes prefixes learned from all neighbors and redistribution sources.		
States: A-Adjacency, P-Pending, D-Down	A-Adjacency: Indicates a stable adjacency with the neighbor or a normal redistribution state.		
	P-Pending: Neighbor adjacency or redistribution is suspended or in a penalized state because the maximum prefix limit has been exceeded.		
	D-Down: Neighbor adjacency or redistribution is suspended permanently until a manually reset is performed with the <b>clear ip eigrp neighbor</b> command.		
Address/Source	Shows either the neighbor IP address or the redistribution source.		
Interface	Shows the interface on which neighbor information is received.		
Prefix Count	Displays the total number of learned prefixes by source.		
	<b>Note</b> Routes can be learned for the same prefix from multiple sources, and the sum of all prefix counts in this column may be greater than the figure displayed in the "Prefix Count" field.		
Restart Count	Number of times a route source has exceeded the maximum-prefix limit.		

Field	Description
Restart Reset(s)	Displays the time, in seconds, that a route source is in a P (penalized) state. If the route source is in an A (stable or normal) state, the displayed time, in seconds, is the time period until penalization history is reset.

### **Related Commands**

nmands	Command	Description	
	show eigrp address-family accounting	Displays prefix accounting information for EIGRP processes.	

## show ip eigrp events

To display the Enhanced Interior Gateway Routing Protocol (EIGRP) event log, use the **show ip eigrp events** command in user EXEC or privileged EXEC mode.

**show ip eigrp** [{**vrf** *vrf-name*}] **events** [{[{**errmsg** | **sia**}] [{*reverse*}] [{*starting-event-number ending-event-number*}] | **type**}]

Syntax Description	-	(Optional) Displays information about the specified VPN routing and forwarding (VRF).	
	errmsg	(Optional) Displays error message events.	
	sia	(Optional) Displays stuck in active (SIA) events.	
	reverse	(Optional)Displays the oldest event first and the most recent event last.	
	starting-event-number	(Optional) Number of the first event to display.	
	ending-event-number	(Optional) Number of the last event to display.	
	type	(Optional) Displays the types of events being logged.	
Command Default	All events in the EIGRP event log are displayed.		
Command Modes	User EXEC (>)		
	Privileged EXEC (#)		
Command History	Release	Modification	
	10.0	This command was introduced.	
	12.2(33)SRE	This command was integrated into Cisco IOS Release 12.2(33)SRE.	
	Cisco IOS XE Release 2.	5 This command was integrated into Cisco IOS XE Release 2.5.	
	15.1(2)S	This command was modified. The <b>reverse</b> keyword was added.	
Usage Guidelines	The EIGRP event log is u	used by Cisco technical support to display a history of EIGRP internal events.	
	This command can be used to display information about EIGRP named configurations and EIG autonomous-system configurations.		
	This command displays the same information as the <b>show eigrp address-family events</b> command. Cisco recommends using the <b>show eigrp address-family events</b> command.		
		<b>p</b> eigrp events command displays the most recent event first and the oldest event in the reverse order (the oldest event first and the recent event last), use the <b>reverse</b>	

### Examples

The following is sample output from the **show ip eigrp events** command. The output fields are self-explanatory.

### Router# show ip eigrp events

Related Commands	Command	Description
	eigrp event-log size	Specifies the size of the EIGRP event log.
	show eigrp address-family events	Displays the EIGRP event log.

## show ip eigrp interfaces

To display information about interfaces that are configured for the Enhanced Interior Gateway Routing Protocol (EIGRP), use the **show ip eigrp interfaces** command in user EXEC or privileged EXEC mode.

show ip eigrp [vrf vrf-name] [autonomous-system-number] interfaces [type number] [{detail}]

Syntax Description	vrf vrf-name	(Optional) Displays information about the specified virtual routing and forwarding (VRF) instance.
	autonomous-system-number	(Optional) Autonomous system number whose output needs to be filtered.
	type	(Optional) Interface type. For more information, use the question mark (?) online help function.
	number	(Optional) Interface or subinterface number. For more information about the numbering syntax for your networking device, use the question mark (?) online help function.
	detail	(Optional) Displays detailed information about EIGRP interfaces for a specific EIGRP process.

### **Command Modes** User EXEC (>)

Privileged EXEC (#)

Command History	Release	Modification
	11.2	This command was introduced.
	12.2(18)SXE	This command was integrated into Cisco IOS Release 12.2(18)SXE. Support for the Bidirectional Forwarding Detection (BFD) feature was added. The <b>detail</b> keyword was added.
	12.0(31)8	This command was integrated into Cisco IOS Release 12.0(31)S. Support for the BFD feature was added. Support for the Cisco 12000 series Internet router was added.
	12.4(4)T	This command was modified. Support for the BFD feature was added. The <b>detail</b> keyword was added.
	12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
	12.2(33)SRE	This command was modified. The <b>vrf</b> <i>vrf-name</i> keyword-argument pair was added. This command replaces the <b>show ip eigrp vrf interfaces</b> command.
	Cisco IOS XE Release 2.5	This command was integrated into Cisco IOS XE Release 2.5.
	15.0(1)M	This command was modified. The <b>vrf</b> <i>vrf-name</i> keyword-argument pair was added. This command replaces the <b>show ip eigrp vrf interfaces</b> command.

	Release	Modification				
	15.1(1)S	This command was modified. The PeerQ Un/Reliable, Packetized sent/expedited, and Hello's sent/expedited fields were included in the command output.				
	Cisco IOS XE Release 3.5S	This command was modified. Information about the Equal Cost Multipath (ECMP) mode was included in the command output.				
	15.2(1)S	This command was modified. Information about the ECMP mode was included in the command output.				
	15.2(3)T	This command was modified. Information about the ECMP mode was included in the command output.				
Usage Guidelines		<b>faces</b> command to display active EIGRP interfaces and EIGRP-specific interface ptional <i>type number</i> argument and the <b>detail</b> keyword can be entered in any order				
	If an interface is specified, c all interfaces on which EIG	only information about that interface is displayed. Otherwise, information about RP is running is displayed.				
	If an autonomous system is sp Otherwise, all EIGRP proce	pecified, only the routing process for the specified autonomous system is displayed esses are displayed.				
	This command can be used to display information about EIGRP named and EIGRP autonomous system configurations.					
	1.1	This command displays the same information as the <b>show eigrp address-family interfaces</b> command. Cisco recommends using the <b>show eigrp address-family interfaces</b> command.				
Examples	The following is sample out	tput from the <b>show ip eigrp interfaces</b> command:				
	Device# show ip eigrp in	nterfaces				
	EIGRP-IPv4 Interfaces fo	or AS(60) t Queue Mean Pacing Time Multicast Pending				
		Reliable         SRTT         Un/Reliable         Flow Timer         Routes           0/0         0         11/434         0         0           0/0         337         0/10         0         0           0/0         10         1/63         103         0           0/0         330         0/16         0         0				
	140 1	at from the show ip eigrp interfaces detail command displays detailed				
	Device# <b>show ip eigrp i</b>	nterfaces detail				
	EIGRP-IPv4 Interfaces fo	or AS(1) Xmit Queue PeerQ Mean Pacing Time Multicast Pending				
	Interface Peers Et0/0 1 Hello-interval is 5, Ho: Split-horizon is enab: Next xmit serial <none Packetized sent/expedi Hello's sent/expedited</none 	e> Lited: 3/0				

Hello's sent/expedited: 6/2 Un/reliable mcasts: 0/6 Un/reliable ucasts: 7/4

```
Mcast exceptions: 1 CR packets: 1 ACKs suppressed: 0
Retransmissions sent: 1 Out-of-sequence rcvd: 0
Topology-ids on interface - 0
Authentication mode is not set
```

The following sample output from the **show ip eigrp interfaces detail** command displays detailed information about a specific interface on which the **no ip next-hop self** command is configured along with the **no-ecmp-mode** option:

```
Device# show ip eigrp interfaces detail tunnel 0
```

EIGRP-IPv4 Interfaces for AS(1)

Pacing Time Xmit Queue PeerO Mean Multicast Pending Interface Routes Peers Un/Reliable Un/Reliable SRTT Un/Reliable Flow Timer Tu0/0 2 0/0 0/0 2 0/0 50 0 Hello-interval is 5, Hold-time is 15 Split-horizon is disabled Next xmit serial <none> Packetized sent/expedited: 24/3 Hello's sent/expedited: 28083/9 Un/reliable mcasts: 0/19 Un/reliable ucasts: 18/64 Mcast exceptions: 5 CR packets: 5 ACKs suppressed: 0 Retransmissions sent: 52 Out-of-sequence rcvd: 2 Next-hop-self disabled, next-hop info forwarded, ECMP mode Enabled Topology-ids on interface - 0 Authentication mode is not set

The table below describes the significant fields shown in the displays.

Field	Description	
Interface	Interface on which EIGRP is configured.	
Peers	Number of directly connected EIGRP neighbors.	
PeerQ Un/Reliable	Number of unreliable and reliable packets queued for transmission to specific peers on the interface.	
Xmit Queue Un/Reliable	Number of packets remaining in the Unreliable and Reliable transmit queues.	
Mean SRTT	Mean smooth round-trip time (SRTT) interval (in seconds).	
Pacing Time Un/Reliable	Pacing time (in seconds) used to determine when EIGRP packets (unreliable and reliable) should be sent out of the interface .	
Multicast Flow Timer	Maximum number of seconds for which the device will send multicast EIGRP packets.	
Pending Routes	Number of routes in the transmit queue waiting to be sent.	
Packetized sent/expedited	Number of EIGRP routes that have been prepared for sending packets to neighbors on an interface, and the number of times multiple routes were stored in a single packet.	
Hello's sent/expedited	Number of EIGRP hello packets that have been sent on an interface and packets that were expedited.	

#### Table 9: show ip eigrp interfaces Field Descriptions

Related Commands	Command	Description
	show eigrp address-family interfaces	Displays information about address family interfaces configured for EIGRP.
	show ip eigrp neighbors	Displays neighbors discovered by EIGRP.

## show ip eigrp neighbors

To display neighbors discovered by the Enhanced Interior Gateway Routing Protocol (EIGRP), use the **show ip eigrp neighbors** command in privileged EXEC mode.

**show ip eigrp** [**vrf** *vrf-name*] [*autonomous-system-number*] **neighbors** [{**static** | **detail**}] [*interface-type interface-number*]

Syntax Description	vrf vrf-name	(Optional) Displays information about the specified VPN Routing and Forwarding (VRF) instance.
	autonomous-system-number	(Optional) Autonomous-system-number-specific output is displayed.
	static	(Optional) Displays static neighbors.
	detail	(Optional) Displays detailed neighbor information.
	interface-type interface-number	(Optional) Interface-specific output is displayed.

### **Command Modes** Privileged EXEC (#)

### **Command History**

Release	Modification
10.3	This command was introduced.
12.0(7)T	This command was modified. The <b>static</b> keyword was added.
12.2(15)T	This command was modified. Support for Nonstop Forwarding (NSF) restart operations was integrated into the output.
12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
12.2(33)SRE	This command was modified. The <b>vrf</b> <i>vrf-name</i> keyword-argument pair was added. This command replaces the <b>show ip eigrp vrf neighbors</b> command.
15.0(1)M	This command was modified. The <b>vrf</b> <i>vrf-name</i> keyword-argument pair was added. This command replaces the <b>show ip eigrp vrf neighbors</b> command.
Cisco IOS XE Release 2.5	This command was integrated into Cisco IOS XE Release 2.5.
15.1(3)8	This command was integrated into Cisco IOS Release 15.1(3)S. The command output was modified to display relevant wide metric information.
Cisco IOS XE Release 3.4S	This command was modified. The command output was modified to display relevant wide metric information.
15.1(1)SY	This command was modified. The command output was modified to display relevant wide metric information.
Cisco IOS XE Release 3.10S	This command was modified. The command output was modified to display information about Location/ID Separation Protocol (LISP) encapsulated routes.

Release	Modification
15.3(3)8	This command was modified. The command output was modified to display information about LISP encapsulated routes.

# Usage Guidelines The show ip eigrp neighbors command can be used to display information about EIGRP named and EIGRP autonomous-system configurations. Use the show ip eigrp neighbors command to display dynamic and static neighbor states. You can use this command for also debugging certain types of transport problems.

This command displays the same information as the **show eigrp address-family neighbors** command. Cisco recommends that you use the **show eigrp address-family neighbors** command.

**Examples** 

The following is sample output from the **show ip eigrp neighbors** command:

Router# show ip eigrp neighbors

Н	Address	Interface	Hold Uptime	SRTT	RTO	Q	Seq
			(sec)	(ms)	C	Cnt	Num
0	10.1.1.2	Et0/0	13 00:00:0	3 1996	5000	0	5
2	10.1.1.9	Et0/0	14 00:02:2	4 206	5000	0	5
1	10.1.2.3	Et0/1	11 00:20:3	9 2202	5000	0	5

The table below describes the significant fields shown in the display.

Table 10: show ip eigrp neighbors Field Descriptions

Field	Description	
Address	IP address of the EIGRP peer.	
Interface	Interface on which the router is receiving hello packets from the peer.	
Hold	Time in seconds for which EIGRP waits to hear from the peer before declaring it down.	
Uptime	Elapsed time (in hours:minutes: seconds) since the local router first heard from this neighbor.	
SRTT	Smooth round-trip time. This is the number of milliseconds required for an EIGRP packet to be sent to this neighbor and for the local router to receive an acknowledgment of that packet.	
RTO	Retransmission timeout (in milliseconds). This is the amount of time the software waits before resending a packet from the retransmission queue to a neighbor.	
Q Cnt	Number of EIGRP packets (update, query, and reply) that the software is waiting to send.	
Seq Num	Sequence number of the last update, query, or reply packet that was received from this neighbor.	

The following is sample output from the show ip eigrp neighbors detailcommand:

Router# show ip eigrp neighbors detail

ΕI	GRP-IPv4 VR(foo)	Address-Family Neighbors	for AS(1)					
Н	Address	Interface	Hold Uptin	ne SRTT	RTO	Q	Seq	
			(sec)	(ms)		Cnt	Num	
0	192.168.10.1	Gi2/0	12	00:00:21	1600	5000	0 (	3
	Static neighbor	(Lisp Encap)						

Version 8.0/2.0, Retrans: 0, Retries: 0, Prefixes: 1 Topology-ids from peer - 0

The table below describes the significant fields shown in the display.

Table 11: show ip eigrp neighbors detail Field Descriptions

Field	Description	
Н	This column lists the order in which a peering session was established with the specified neighbor. The order is specified with sequential numbering starting with 0.	
Address	IP address of the EIGRP peer.	
Interface	Interface on which the router is receiving hello packets from the peer.	
Hold	Time in seconds for which EIGRP waits to hear from the peer before declaring it down.	
Lisp Encap	Indicates that routes from this neighbor are LISP encapsulated.	
Uptime	Elapsed time (in hours:minutes: seconds) since the local router first heard from this neighbor.	
SRTT	Smooth round-trip time. This is the number of milliseconds required for an EIGRP packet to be sent to this neighbor and for the local router to receive an acknowledgment of that packet.	
RTO	Retransmission timeout (in milliseconds). This is the amount of time the software waits before resending a packet from the retransmission queue to a neighbor.	
Q Cnt	Number of EIGRP packets (update, query, and reply) that the software is waiting to send.	
Seq Num	n Sequence number of the last update, query, or reply packet that was received from this neighbor	
Version	The software version that the specified peer is running.	
Retrans	Number of times that a packet has been retransmitted.	
Retries	Number of times an attempt was made to retransmit a packet.	

Related Commands	Command	Description
	show eigrp address-family neighbors	Displays neighbors discovered by EIGRP.

## show ip eigrp topology

To display Enhanced Interior Gateway Routing Protocol (EIGRP) topology table entries, use the **show ip** eigrp topology command in user EXEC or privileged EXEC mode.

**show ip eigrp topology**[{**vrf** *vrf-nameautonomous-system-number* | *network* [{*mask*]*prefix* | **active** | **all-links** | **detail-links** | **frr** | **name** | **pending** | **summary** | **zero-successors**}]

Syntax Description	vrf vrf-name	(Optional) Displays in forwarding (VRF) inst	formation about the specified virtual routing and ance.		
	autonomous-system-number	(Optional) Autonomous system number.			
	network	(Optional) Network ac	ldress.		
	mask	(Optional) Network m	(Optional) Network mask.		
	prefix	(Optional) Network prefix in the format <network>/<length>; for 192.168.0.0/16.</length></network>			
	active	(Optional) Displays all topology entries that are in the active state.(Optional) Displays all entries in the EIGRP topology table (including nonfeasible-successor sources).			
	all-links				
	detail-links	(Optional) Displays all topology entries with additional details.			
	frr	(Optional) Displays information about Fast Reroute (FRR) loop (LFAs).			
	name		e IPv4 topology table name. This name is the topology pology-related information for Multitopology Routing		
	pending	<ul><li>(Optional) Displays all entries in the EIGRP topology table that are either waiting for an update from a neighbor or waiting to reply to a neighbor.</li><li>(Optional) Displays a summary of the EIGRP topology table.</li></ul>			
	summary				
	zero-successors	(Optional) Displays av	vailable routes that have zero successors.		
Command Default	If this command is used witho are displayed and only feasibl		ywords, only topology entries with feasible successors		
Command Modes	User EXEC (>)				
	Privileged EXEC (#)				
Command History	Release		Modification		
	10.0		This command was introduced.		

I

Release	Modification
12.3(8)T	This command was modified. The output of this command was enhanced to display internal and external EIGRP routes.
12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
12.2(33)SRB	This command was modified. The <b>name</b> keyword was added to support MTR.
12.2(33)SXH	This command was integrated into Cisco IOS Release 12.2(33)SXH.
15.0(1)M	This command was modified. The <b>vrf</b> <i>vrf-name</i> keyword-argument pair was added.
12.2(33)SRE	This command was modified. The <b>vrf</b> <i>vrf-name</i> keyword-argument pair was added. The <b>name</b> keyword was removed.
Cisco IOS XE Release 2.5	This command was integrated into Cisco IOS XE Release 2.5.
15.1(3)S	This command was integrated into Cisco IOS Release 15.1(3)S. The output of the command was enhanced to display information about wide metrics.
Cisco IOS XE Release 3.4S	This command was modified. The output of the command was enhanced to display information about wide metrics.
Cisco IOS XE Release 3.5S	This command was modified. Information about the Equal Cost Multipath (ECMP) mode was included in the command output.
15.2(1)S	This command was modified. Information about the ECMP mode was included in the command output.
15.2(2)S	This command was modified. The output of the command was enhanced to display route tag values in dotted-decimal format.
Cisco IOS XE Release 3.6S	This command was modified. The output of the command was enhanced to display route tag values in dotted-decimal format.
15.2(3)T	This command was modified. Information about the ECMP mode was included in the command output.
15.2(4)S	This command was modified. The <b>frr</b> keyword was added.

	Release	Modification		
	Cisco IOS XE Release 3.7S	This command was modified. The <b>frr</b> keyword was added.		
	15.1(1)SY	This command was integrated into Cisco IOS Release 15.1(1)SY. The output of the command was enhanced to display information about wide metrics.		
Usage Guidelines	Use the <b>show ip eigrp topology</b> command to display topology entries, feasible and nonfeasible paths, metrics and states. This command can be used without any arguments or keywords to display only topology entries with feasible successors and feasible paths. The <b>all-links</b> keyword displays all paths, whether feasible or not and the <b>detail-links</b> keyword displays additional details about these paths.			
	Use this command to display information about EIGRP named and EIGRP autonomous system configurations. This command displays the same information as the <b>show eigrp address-family topology</b> command. We recommend using the <b>show eigrp address-family topology</b> command.			
Examples	The following is sample output from the <b>show ip eigrp topology</b> command:			
	Device# show ip eigrp topology			
	<pre>EIGRP-IPv4 Topology Table for AS(1)/ID Codes: P - Passive, A - Active, U - Up r - Reply status, s - sia statu P 10.0.0/8, 1 successors, FD is 4096 via 192.0.2.1 (409600/128256), P 172.16.1.0/24, 1 successors, FD is 4 via 192.0.2.1 (409600/128256), P 10.0.0.0/8, 1 successors, FD is 2816 via Summary (281600/0), Null0 P 10.0.1.0/24, 1 successors, FD is 281 via Connected, Ethernet0/0</pre>	date, Q - Query, R - Reply, 18 1900 Ethernet0/0 09600 Ethernet0/0 100		
	The following sample output from the <b>show ip eigrp topology</b> <i>prefix</i> command displays detailed information about a single prefix. The prefix shown is an EIGRP internal route.			
	Device# show ip eigrp topology 10.0.0/8			
	EIGRP-IPv4 VR(vr1) Topology Entry for State is Passive, Query origin flag Descriptor Blocks: 10.1.1.1 (Ethernet2/0), from 10.1.1.	is 1, 1 Successor(s), FD is 82329600, RIB is 643200 1, Send flag is 0x0		

Total delay is 631250000 picoseconds Reliability is 255/255 Load is ½55 Minimum MTU is 1500 Hop count is 1 Originating router is 10.1.1.1

Composite metric is (82329600/163840), route is Internal

Vector metric:

Minimum bandwidth is 16000 Kbit

The following sample output from the **show ip eigrp topology** *prefix* command displays detailed information about a single prefix. The prefix shown is an EIGRP external route.

```
Device# show ip eigrp topology 172.16.1.0/24
EIGRP-IPv4 Topology Entry for AS(1)/ID(10.0.0.1) for 172.16.1.0/24
State is Passive, Query origin flag is 1, 1 Successor(s), FD is 409600, RIB is 643200
  Descriptor Blocks:
  172.16.1.0/24 (Ethernet0/0), from 10.0.1.2, Send flag is 0x0
      Composite metric is (409600/128256), route is External
      Vector metric:
        Minimum bandwidth is 10000 Kbit
        Total delay is 6000 picoseconds
        Reliability is 255/255
        Load is ½55
        Minimum MTU is 1500
        Hop count is 1
        Originating router is 172.16.1.0/24
        External data:
        AS number of route is 0
        External protocol is Connected, external metric is O
        Administrator tag is 0 (0x0000000)
```

The following sample output from the **show ip eigrp topology** *prefix* command displays Equal Cost Multipath (ECMP) mode information when the **no ip next-hop-self** command is configured without the **no-ecmp-mode** keyword in an EIGRP topology. The ECMP mode provides information about the path that is being advertised. If there is more than one successor, the top most path will be advertised as the default path over all interfaces, and "ECMP Mode: Advertise by default" will be displayed in the output. If any path other than the default path is advertised, "ECMP Mode: Advertise out <Interface name>" will be displayed.

The topology table displays entries of routes for a particular prefix. The routes are sorted based on metric, next-hop, and infosource. In a Dynamic Multipoint VPN (DMVPN) scenario, routes with same metric and next-hop are sorted based on infosource. The top route in the ECMP is always advertised.

```
Device# show ip eigrp topology 192.168.10.0/24
EIGRP-IPv4 Topology Entry for AS(1)/ID(10.10.100.100) for 192.168.10.0/24
State is Passive, Query origin flag is 1, 2 Successor(s), FD is 284160
  Descriptor Blocks:
  10.100.1.0 (Tunnel0), from 10.100.0.1, Send flag is 0x0
      Composite metric is (284160/281600), route is Internal
      Vector metric:
       Minimum bandwidth is 10000 Kbit
        Total delay is 1100 microseconds
        Reliability is 255/255
        Load is 355
        Minimum MTU is 1400
        Hop count is 1
        Originating router is 10.10.1.1
        ECMP Mode: Advertise by default
        10.100.0.2 (Tunnel1), from 10.100.0.2, Send flag is 0X0
        Composite metric is (284160/281600), route is Internal
        Vector metric:
        Minimum bandwidth is 10000 Kbit
        Total delay is 1100 microseconds
        Reliability is 255/255
        Load is ½55
        Minimum MTU is 1400
        Hop count is 1
        Originating router is 10.10.2.2
        ECMP Mode: Advertise out Tunnel1
```

The following sample output from the **show ip eigrp topology all-links** command displays all paths, even those that are not feasible:

```
Device# show ip eigrp topology all-links
EIGRP-IPv4 Topology Table for AS(1)/ID(10.0.0.1)
Codes: P - Passive, A - Active, U - Update, Q - Query, R - Reply,
        r - reply Status, s - sia Status
P 172.16.1.0/24, 1 successors, FD is 409600, serno 14
        via 10.10.1.2 (409600/128256), Ethernet0/0
        via 10.1.4.3 (2586111744/2585599744), Serial3/0, serno 18
```

The following sample output from the **show ip eigrp topology detail-links** command displays additional details about routes:

```
Device# show ip eigrp topology detail-links
EIGRP-IPv4 Topology Table for AS(1)/ID(10.0.0.1)
Codes: P - Passive, A - Active, U - Update, Q - Query, R - Reply,
    r - reply Status, s - sia Status
P 10.0.0.0/8, 1 successors, FD is 409600, serno 6
    via 10.10.1.2 (409600/128256), Ethernet0/0
P 172.16.1.0/24, 1 successors, FD is 409600, serno 14
    via 10.10.1.2 (409600/128256), Ethernet0/0
P 10.0.0.0/8, 1 successors, FD is 281600, serno 3
    via Summary (281600/0), Null0
P 10.1.1.0/24, 1 successors, FD is 281600, serno 1
    via Connected, Ethernet0/0
```

The following sample output from the **show ip eigrp topology frr** command displays details about the LFAs in the EIGRP topology:

```
Device# show ip eigrp topology frr
EIGRP-IPv4 VR(test) Topology Table for AS(1)/ID(10.1.1.1)
Codes: P - Passive, A - Active, U - Update, Q - Query, R - Reply,
       r - reply Status, s - sia Status
P 192.168.2.0/24, 1 successors, FD is 131153920
        via 10.1.1.2 (131153920/163840), Ethernet0/0
        via 10.3.3.3 (137625600/6635520), Ethernet0/1, [LFA]
P 192.168.1.0/24, 1 successors, FD is 131153920
        via 10.1.1.2 (131153920/163840), Ethernet0/0
        via 10.4.4.4 (137625600/6635520), Ethernet0/2, [LFA]
        via 10.3.3.3 (137625600/6635520), Ethernet0/1
P 192.168.4.0/32, 1 successors, FD is 131727360
        via 10.4.4.4 (131727360/7208960), Ethernet0/2
P 192.168.3.0/24, 1 successors, FD is 131072000
        via Connected, Ethernet0/1
P 192.168.5.0/24, 1 successors, FD is 131072000
        via Connected, Ethernet0/0
P 10.10.10.0/24, 1 successors, FD is 262144000
        via 10.1.1.2 (262144000/196608000), Ethernet0/0
        via 10.4.4.4 (131727360/7208960), Ethernet0/2, [LFA]
```

The following is a sample output from the **show ip eigrp topology** command when the EIGRP process is in pending state:

```
Device# show ip eigrp topology
EIGRP-IPv4 VR(test) Topology Table for AS(100)/ID(2.2.2.2)
Codes: P - Passive, A - Active, U - Update, Q - Query, R - Reply,
```

```
r - reply Status, s - sia Status
EIGRP Process is in Pending state. Restart in 296 sec.
P 10.0.0.0/24, 1 successors, FD is 131072000
via Connected, Ethernet0/0
P 20.0.0.0/24, 1 successors, FD is 131072000
via Connected, Ethernet0/1
```

The following is a sample output from the **show ip eigrp topology** command when the EIGRP process is in down state:

```
Device# show ip eigrp topology
EIGRP-IPv4 VR(test) Topology Table for AS(100)/ID(2.2.2.2)
Codes: P - Passive, A - Active, U - Update, Q - Query, R - Reply,
    r - reply Status, s - sia Status
EIGRP Process is in DOWN state. Manual restart required.
P 10.0.0.0/24, 1 successors, FD is 131072000
    via Connected, Ethernet0/0
P 20.0.0.0/24, 1 successors, FD is 131072000
    via Connected, Ethernet0/1
```

The following is a sample output from the **show ip eigrp topology** command when the EIGRP redistribution is in pending state:

```
Device# show ip eigrp topology
EIGRP-IPv4 VR(test) Topology Table for AS(100)/ID(2.2.2.2)
Codes: P - Passive, A - Active, U - Update, Q - Query, R - Reply,
        r - reply Status, s - sia Status
```

Redistribution is in Pending state. Restart in 44 sec.

```
P 15.15.15.0/24, 1 successors, FD is 131153920
        via 10.0.0.1 (131153920/163840), Ethernet0/0
P 14.14.14.0/24, 1 successors, FD is 131153920
        via 10.0.0.1 (131153920/163840), Ethernet0/0
P 10.0.0/24, 1 successors, FD is 131072000

via 10.0.0.1 (131153920/163840), Ethernet0/0
P 13.13.13.0/24, 1 successors, FD is 131153920
via 10.0.0.1 (131153920/163840), Ethernet0/0
P 11.11.0/24, 1 successors, FD is 131153920
via 10.0.0.1 (131153920/163840), Ethernet0/0

The table below describes the significant fields shown in the displays.

Table 12: show ip eigrp topology Field Descriptions

Field	Description
Codes	State of this topology table entry. Passive and Active refer to the EIGRP state with respect to the destination. Update, Query, and Reply refer to the type of packet that is being sent.
	• P - Passive—Indicates that no EIGRP computations are being performed for this route.
	• A - Active—Indicates that EIGRP computations are being performed for this route.
	• U - Update—Indicates that a pending update packet is waiting to be sent for this route.
	• Q - Query—Indicates that a pending query packet is waiting to be sent for this route.
	• R - Reply—Indicates that a pending reply packet is waiting to be sent for this route.
	• r - Reply status—Indicates that EIGRP has sent a query for the route and is waiting for a reply from the specified path.
	• s - sia status—Indicates that the EIGRP query packet is in stuck-in-active (SIA) status.
successors	Number of successors. This number corresponds to the number of next hops in the IP routing table. If "successors" is capitalized, then the route or the next hop is in a transition state.
serno	Serial number.

I

Field	Description
FD	Feasible distance. The feasible distance is the best metric to reach the destination or the best metric that was known when the route became active. This value is used in the feasibility condition check. If the reported distance of the device is less than the feasible distance, the feasibility condition is met and that route becomes a feasible successor. After the software determines that it has a feasible successor, the software need not send a query for that destination.
via	Next-hop address that advertises the passive route.

### **Related Commands**

Command	Description
show eigrp address-family topology	Displays entries in the EIGRP address-family topology table.

### show ip eigrp traffic

To display the number of Enhanced Interior Gateway Routing Protocol (EIGRP) packets sent and received, use the **show ip eigrp traffic** command in privileged EXEC mode.

show ip eigrp [vrf {vrf-name | \*}] [autonomous-system-number] traffic

Syntax Description	vrf vrf-name	(Optional) Displays information about the specified VRF.		
	vrf *	(Optional) Displays information about all VRFs.		
	autonomous-system-number	(Optional) Autonomous system number.		

### Command Modes Privileged EXEC (#)

Release	Modification		
10.0	This command was introduced.		
12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.		
12.2SX	This command is supported in the Cisco IOS Release 12.2SX train. Support in a specific 12.2SX release of this train depends on your feature set, platform, and platform hardware.		
15.0(1)M	This command was modified. The <b>vrf</b> , <i>vrf-name</i> , and * keywords and arguments were added. This command replaces the <b>show ip eigrp vrf traffic</b> command.		
12.2(33)SRE	This command was modified. The <b>vrf</b> , <i>vrf-name</i> , and * keywords and arguments were added. This command replaces the <b>show ip eigrp vrf traffic</b> command.		
12.2(33)XNE	This command was integrated into Cisco IOS Release 12.2(33)XNE.		
Cisco IOS XE Release 2.5	This command was integrated into Cisco IOS XE Release 2.5.		
	10.0 10.0 12.2(33)SRA 12.2SX 15.0(1)M 12.2(33)SRE 12.2(33)XNE		

**Usage Guidelines** This command can be used to display information about EIGRP named configurations and EIGRP autonomous-system (AS) configurations.

This command displays the same information as the **show eigrp address-family traffic** command. Cisco recommends using the **show eigrp address-family traffic** command.

Examples

The following is sample output from the **show ip eigrp traffic** command:

Router# show ip eigrp traffic EIGRP-IPv4 Traffic Statistics for AS(60) Hellos sent/received: 21429/2809 Updates sent/received: 22/17 Queries sent/received: 0/0 Replies sent/received: 0/0 Acks sent/received: 16/13 SIA-Queries sent/received: 0/0 SIA-Replies sent/received: 0/0
Hello Process ID: 204
PDM Process ID: 203
Socket Queue: 0/2000/2/0 (current/max/highest/drops)
Input Queue: 0/2000/2/0 (current/max/highest/drops)

The table below describes the significant fields shown in the display.

Table 13: show ip eigrp traffic Field Descriptions

Field	Description
Hellos sent/received	Number of hello packets sent and received.
Updates sent/received	Number of update packets sent and received.
Queries sent/received	Number of query packets sent and received.
Replies sent/received	Number of reply packets sent and received.
Acks sent/received	Number of acknowledgement packets sent and received.
SIA-Queries sent/received	Number of stuck in active query packets sent and received.
SIA-Replies sent/received	Number of stuck in active reply packets sent and received.
Hello Process ID	Hello process identifier.
PDM Process ID	Protocol-dependent module IOS process identifier.
Socket Queue	The IP to EIGRP Hello Process socket queue counters.
Input queue	The EIGRP Hello Process to EIGRP PDM socket queue counters.

### **Related Commands**

Command	Description
show eigrp address-family traffic	Displays the number of EIGRP packets sent and received.

## show ip eigrp vrf accounting

## 

**Note** Effective with Cisco IOS Release 15.0(1)M, this command was replaced by the **show ip eigrp accounting** command. See the **show ip eigrp accounting** command for more information.

To display prefix accounting information for an Enhanced Interior Gateway Routing Protocol (EIGRP) VPN routing and forwarding instance (VRF), use the **show ip eigrp vrf accounting**command in privileged EXEC mode.

**show ip eigrp vrf** {*vrf-name* | \*} **accounting** [*autonomous-system-number*]

Syntax Description	Description vrf-name		Specifies the	VRF name.

			St0/0	2	0	84	
			Se2/0	0	2	114	
D 10.0.1.3		0.1.3 E	5t0/0	0	3	0	

Note

Connected and summary routes are not listed individually in the output of this command but are counted in the total aggregate count per process.

The table below describes the significant fields shown in the display.

Table 14: show ip eigrp vrf accounting Field Descriptions

Field	Description		
IP-EIGRP accounting for AS	Identifies the EIGRP instance along with the AS number, Router ID and Table ID.		
Total Prefix Count	Shows to the aggregate sum of the prefixes in an EIGRP instance topology table. It includes prefixes learnt from all neighbors or from redistribution.		
States: A-Adjacency, P-Pending, D-Down	A-Adjacency: Indicates a stable adjacency with the neighbor or a normal redistribution state.		
	P-Pending: Neighbor adjacency or redistribution in suspended or in a penalized state because the maximum prefix limit has been exceeded.		
	D-Down: Neighbor adjacency or redistribution is suspended permanently until a manually reset is performed with the <b>clear ip route</b> command.		
Address/Source	Shows the peer IP address of the redistribution source.		
Prefix Count	Displays the total number of learned prefixes by source.		
	<b>Note</b> Routes can be learned for the same prefix from multiple sources, and the sum of all prefix counts in this column may be greater than the figure displayed in the "Prefix Count" field.		
Restart Count	Number of times a route source has exceeded the maximum-prefix limit.		
Restart/Reset(s)	Displays the time, in seconds, that a route source is in a P (penalized) state. If the route source is in an A (stable or normal) state, the displayed time, in seconds, is the time period until penalization history is reset.		

Related Commands	Command	Description		
	show eigrp address-family accounting	Displays prefix accounting information for EIGRP processes.		

L

## show ip eigrp vrf interfaces

## 

**Note** Effective with Cisco IOS Release 15.0(1)M, this command was replaced by the **show ip eigrp interfaces** command. See the **show ip eigrp interfaces** command for more information.

To display information about interfaces that carry VPN routing and forwarding (VRF) information and that are configured for Enhanced Interior Gateway Routing Protocol (EIGRP), use the **show ip eigrp vrf interfaces** command in privileged EXEC mode.

**show ip eigrp vrf** {*vrf-name* | \*} **interfaces** [*autonomous-system-number*] [*interface-type*] [**detail** *interface-type*] [**static** *interface-type*]

Syntax Description	vrf-name	Specifies the VRF name.		
	*	Displays all VRFs.		
	autonomous-system-number	(Optional) Specifies the autonomous system number.		
	interface-type	(Optional) Specifies the VRF interface for which to display EIGRP information.		
	detail interface-type	(Optional) Displays detailed VRF peer information. The interface can be specified after this keyword is entered.		
	static interface-type	(Optional) Displays VRF information for static neighbors. The interface can be specified after this keyword is entered. The interface-type argument allows you to display information about static neighbors for VRFs that are configured on specific interfaces.		

### Command Modes Privileged EXEC (#)

Command History	Release	Modification
	12.0(22)S	This command was introduced.
	12.2(15)T	This command was integrated into 12.2(15)T.
	12.2(18)S	This command was integrated into Cisco IOS Release 12.2(18)S.
	12.2(27)SBC	This command was integrated into Cisco IOS Release 12.2(27)SBC.
	15.0(1)M	This command was replaced by the <b>show ip eigrp interfaces</b> command.

#### **Usage Guidelines**

Use the **show ip eigrp vrf interfaces** command to display EIGRP interfaces that are defined under the specified VRF. If an interface is specified with the *interface-type* argument, only the specified interface is displayed. Otherwise, all interfaces on which EIGRP is running as part of the specified VRF are displayed.

This command can be used to display information about EIGRP named configurations and EIGRP autonomous-system (AS) configurations.

This command displays the same information as the **show eigrp address-family interfaces** command. Cisco recommends using the **show eigrp address-family interfaces** command.

### **Examples**

The following is sample output from the show ip eigrp vrf interfacescommand:

Router# <b>show ip eigrp vrf VRF-PINK interfaces</b> IP-EIGRP interfaces for process 1						
II DIGICI INCOLLO	1000 101	1	Mean	Pacing Time	Multicast	Pending
Interface	Peers	~		Un/Reliable		Routes
Et3/0	1	0/0	131	0/10	528	0

The table below describes the significant fields shown in the display.

Table 15: show ip eigrp vrf interfaces Field Descriptions

Field	Description
IP-EIGRP interfaces for process	Displays the autonomous system number for the specified VRF.
Interface	Interface over which EIGRP is configured.
Peers	Number of directly connected EIGRP neighbors.
Xmit Queue Un/Reliable	Number of packets remaining in the Unreliable and Reliable transmit queues.
Mean SRTT	Mean smooth round-trip time (SRTT) interval (in milliseconds).
Pacing Time Un/Reliable	Pacing time used to determine when EIGRP packets should be sent out the interface (unreliable and reliable packets).
Multicast Flow Timer	Maximum number of seconds in which the router will send multicast EIGRP packets.
Pending Routes	Number of routes in the packets in the transmit queue waiting to be sent.

#### **Related Commands**

Command	Description
show eigrp address-family interfaces	Displays information about interfaces configured for EIGRP.
clear ip eigrp vrf neighbors	Clears neighbor entries of the specified VRF from the RIB.
show ip eigrp vrf neighbors	Displays neighbors discovered by EIGRP that carry VRF information.
show ip eigrp vrf topology	Displays VRF entries in the EIGRP topology table.
show ip eigrp vrf traffic	Displays EIGRP VRF traffic statistics.

### show ip eigrp vrf neighbors

## 

**Note** Effective with Cisco IOS Release 15.0(1)M, this command was replaced by the **show ip eigrp neighbors** command. See the **show ip eigrp neighbors** command for more information.

To display Enhanced Interior Gateway Routing Protocol (EIGRP) neighbors that are on interfaces that are part of the specified Virtual Private Network (VPN) routing and forwarding instance (VRF), use the **show ip** eigrp vrf neighbors command privileged EXEC mode.

**show ip eigrp vrf** {*vrf-name* | \*} **neighbors** [*autonomous-system-number*] [*interface-type*] [**detail** *interface-type*] [**static** *interface-type*]

Syntax Description	vrf-name	Specifies the VRF name.
	*	Displays all VRFs.
	autonomous-system-number	(Optional) Autonomous system number.
	interface-type	(Optional) Interface to display neighbor information under the specified VRF.
	detail interface-type	(Optional) Displays detailed VRF peer information. The interface can be specified after this keyword is entered.
	static interface-type	(Optional) Displays VRF information for static neighbors. The interface can be specified after this keyword is entered. The <i>interface-type</i> argument allows you to display information about static neighbors for VRFs that are configured on specific interfaces.

### Command Modes Privileged EXEC (#)

Command History	Release	Modification
	12.0(22)S	This command was introduced.
	12.2(15)T	This command was integrated into 12.2(15)T.
	12.2(18)S	This command was integrated into Cisco IOS Release 12.2(18)S.
	12.2(27)SBC	This command was integrated into Cisco IOS Release 12.2(27)SBC.
	15.0(1)M	This command was replaced by the <b>show ip eigrp neighbors</b> command.

### **Usage Guidelines**

Use the **show ip eigrp vrf neighbors** command to determine when VRF neighbors become active and inactive. This command is also useful for debugging certain types of transport problems.

This command can be used to display information about EIGRP named configurations and EIGRP autonomous-system (AS) configurations.

I

This command displays the same information as the **show eigrp address-family neighbors** command. Cisco recommends using the **show eigrp address-family neighbors** command.

Examples

The following is sample output from the **show ip eigrp vrf neighbors** command:

	Router# <b>show ip eigrp vrf VRF-GREEN neighbors</b> IP-EIGRP neighbors for process 1					
Н	Address	Interface	Hold Uptime	SRTT	RTO Q	
1	Туре		(sec)	(ms)	Cnt	
Num O	10.10.10.2	Et3/0	10 1d16h	131	786 0	3

The table below describes the significant fields shown in the display.

Table 16: show ip eigrp vrf neighbors Field Descriptions

Field	Description
IP-EIGRP neighbors for process	Displays the autonomous-system number for the specified EIGRP VRF.
Address	IP address of the EIGRP peer.
Interface	Interface on which the router is receiving hello packets from the peer.
Hold Uptime	Length of time (in seconds) that the Cisco IOS software will wait to hear from the peer before declaring it down, and the length in time (in seconds) since the local router first heard from this neighbor.
SRTT	Smooth round-trip time. This is the number of milliseconds required for an EIGRP packet to be sent to this neighbor and for the local router to receive an acknowledgment of that packet.
RTO	Retransmission timeout (in milliseconds). This is the amount of time the software waits before resending a packet from the retransmission queue to a neighbor.
Q	Number of EIGRP packets (update, query, and reply) that the software is waiting to send.

Related Commands	Command	Description	
	show eigrp address-family neighbors	Displays neighbors discovered by EIGRP.	

## show ip eigrp vrf topology

To display VPN routing and forwarding (VRF) entries in the Enhanced Interior Gateway Routing Protocol (EIGRP) topology table, use the **show ip eigrp vrf topology** command in user EXEC or privileged EXEC mode.

show ip eigrp vrf {vrf-name | \*} topology [as-number] [ip-address [mask]] [{active | all-links |
pending | summary | zero-successors}]

Syntax Description	vrf-name	Name of the VRF.
	*	Displays all VRFs.
	as-number	(Optional) Autonomous system number.
	ip-address	(Optional) IP address. When the IP address is specified with a mask, a detailed description of the entry is provided.
	mask	(Optional) Subnet mask.
	active	(Optional) Displays only active entries in the EIGRP topology table.
	all-links	(Optional) Displays all entries in the EIGRP topology table (including nonfeasible-successor sources).
	pending	(Optional) Displays all entries in the EIGRP topology table that are either waiting for an update from a neighbor or waiting to reply to a neighbor.
	summary	(Optional) Displays a summary of the EIGRP topology table.
	zero-successors	(Optional) Displays available routes that have zero successors.
Command Modes	User EXEC (>)	

Privileged EXEC (#)

### **Command History**

Release	Modification
12.0(22)S	This command was introduced.
12.2(15)T	This command was integrated into Cisco IOS Release 12.2(15)T.
12.2(27)SBC	This command was integrated into Cisco IOS Release 12.2(27)SBC.
15.2(2)8	This command was modified. The output of the command was enhanced to display route tag values in dotted-decimal format.
Cisco IOS XE Release 3.6S	This command was modified. This command was integrated into Cisco IOS XE Release 3.6S. The output of the command was enhanced to display route tag values in dotted-decimal format.

### The show ip eigrp vrf topology command can be used to determine Diffusing Update Algorithm (DUAL) **Usage Guidelines** states and to debug possible DUAL problems. This command can be used to display information about EIGRP named and EIGRP autonomous system configurations. This show ip eigrp vrf topology command displays the same information as the show eigrp address-family topology command. We recommend using the show eigrp address-family topology command. Examples The following is sample output from the show ip eigrp vrf vrf-name topology command: Device# show ip eigrp vrf VRF1 topology IP-EIGRP Topology Table for AS(1)/ID(192.168.10.1) Routing Table:VRF1 Codes:P - Passive, A - Active, U - Update, Q - Query, R - Reply, r - reply Status, s - sia Status P 10.17.17.0/24, 1 successors, FD is 409600 via 10.10.10.2 (409600/128256), Ethernet3/0 P 172.16.19.0/24, 1 successors, FD is 409600 via 10.10.10.2 (409600/128256), Ethernet3/0 P 192.168.10.0/24, 1 successors, FD is 281600 via Connected, Ethernet3/0 P 10.10.10.0/24, 1 successors, FD is 281600

The table below describes the significant fields shown in the display.

Table 17: show ip eigrp vrf vrf-name topology Field Descriptions

via Redistributed (281600/0)

Field	Description
Codes	State of this topology table entry. Passive and Active refer to the EIGRP state with respect to the destination; Update, Query, and Reply refer to the type of packet that is being sent.
P—Passive	No EIGRP computations are being performed for this destination.
A—Active	EIGRP computations are being performed for this destination.
U—Update	An update packet was sent to this destination.
Q—Query	A query packet was sent to this destination.
R—Reply	A reply packet was sent to this destination.
r—reply Status	The flag that is set after the software has sent a query and is waiting for a reply.
s—sia Status	The flag that is set if a route is in stuck-in-active state.
successors	Number of successors. This number corresponds to the number of next hops in the IP routing table. If "successors" is capitalized, then the route or the next hop is in a transition state.

I

Field	Description
FD	Feasible distance. The feasible distance is the best metric to reach the destination or the best metric that was known when the route became active. This value is used in the feasibility condition check. If the reported distance of the device is less than the feasible distance, the feasibility condition is met and that route becomes a feasible successor. After the software determines that it has a feasible successor, the software need not send a query for that destination.
replies	(Not shown in the output) Number of replies that are still outstanding (have not been received) with respect to this destination. This information appears only when the destination is in active state.
state	(Not shown in the output) The exact EIGRP state of this destination. It can be the number 0, 1, 2, or 3. This information appears only when the destination is in active state.
via	IP address of the peer that advertised this destination. The first of these entries is the current successor. Subsequent entries on the list are feasible successors.
(409600/128256)	The first number is the EIGRP metric that represents the cost to the destination. The second number is the EIGRP metric that this peer advertised.
Ethernet3/0	The interface from which this information was learned.

Related Commands	Command	Description
	show eigrp address-family topology	Displays entries in the EIGRP address-family topology table.

## show ip eigrp vrf traffic

**Note** Effective with Cisco IOS Release 15.0(1)M, the **show ip eigrp vrf traffic** command is replaced by the **show ip eigrp traffic** command. See the **show ip eigrp traffic** command for more information.

To display sent and received statistics for Enhanced Interior Gateway Routing Protocol (EIGRP) Virtual Private Networking (VPN) routing and forwarding instance (VRF) packets, use the **show ip eigrp vrf traffic** command in privileged EXEC mode.

**show ip eigrp vrf** {*vrf-name* | \*} **traffic** [*as-number*]

Syntax Description	vrf-name	VRF name.	
	*	Displays all VRFs.	
	as-number	(Optional) Autonomous system number.	
Command Modes	Privileged EX	XEC (#)	
Command History	Release	Modification	
	12.0(22)S	This command was introduced.	
	12.2(15)T	This command was integrated into 12.2(15)T.	
	12.2(18)S	This command was integrated into Cisco IOS Release 12.2(18)S.	
	12.2(27)SBC	This command was integrated into Cisco IOS Release 12.2(27)SBC.	
	15.0(1)M	This command was replaced by the <b>show ip eigrp traffic</b> command.	
Usage Guidelines	This command can be used to display information about EIGRP named configurations and EIGRP autonomous-system (AS) configurations.		
		This command displays the same information as the <b>show eigrp address-family traffic</b> command. Cisc recommends using the <b>show eigrp address-family traffic</b> command.	
Examples	The following is sample output from the <b>show ip eigrp vrf traffic</b> command:		
	IP-EIGRP Tra Hellos ser Updates se Queries se Replies se Acks sent,	w ip eigrp vrf VRF-RED traffic affic Statistics for AS 101 nt/received: 600/585 ent/received: 23/22 ent/received: 7/0 ent/received: 0/6 /received: 55/42 ue high water mark 0, 0 drops	

The table below describes the significant fields shown in the display.

### Table 18: show ip eigrp vrf traffic Field Descriptions

Field	Description
IP-EIGRP Traffic Statistics for AS	Displays the autonomous system number for the specified EIGRP VRF.
Hellos sent/received	Number of hello packets sent and received.
Updates sent/received	Number of update packets sent and received.
Queries sent/received	Number of query packets sent and received.
Replies sent/received	Number of reply packets sent and received.
Acks sent/received	Number of acknowledgment packets sent and received.
Input queue high water mark, drops	Number of received packets that are approaching the maximum receive threshold and number of dropped packets.

Related Commands	Command	Description
	show eigrp address-family traffic	Displays the number of EIGRP packets sent and received.

## show ip route tag

To display route tag entries for IPv4 routes, use the **show ip route tag** command in user EXEC or privileged EXEC mode.

**show ip route tag** {*tag-value* | *tag-value-dotted-decimal* [{*mask*}]}

Syntax Description	tag-value	Route tag value in plain decimals. The ran	nge is from 1 to 4294967295.	
	<i>tag-value-dotted-decimal</i> Route tag value in dotted decimals. The range is from 0.0.0.0 to 255.255.25			
	mask	ask (Optional) Route tag wildcard mask.		
Command Modes	User EXEC (>)			
	Privileged EXEC (#)			
Command History	Release		Modification	
	15.2(2)S		This command was introduced.	
	Cisco IOS XE Release 3.6	S	This command was integrated into Cisco IOS XE Release 3.6S.	
	15.2(4)M		This command was integrated into Cisco IOS Release 15.2(4)M.	
Usage Guidelines	Route tags are 32-bit values as either plain decimals or c	attached to routes. They are used to filter ro lotted decimals.	utes. You can display route tag values	
Examples	0 1 1	It from the <b>show ip route tag</b> command dis route tag entries in this output are displayed	1 5	
	Device# show ip route tag 1.1.1.1			
	<pre>Routing entry for 192.168.10.0/24 Known via "eigrp 2", distance 170, metric 1536000 Tag 1.1.1.1, type external Redistributing via eigrp 2 Last update from 10.0.0.1 on Ethernet0/1, 00:00:20 ago Routing Descriptor Blocks: * 10.0.0.1, from 10.0.0.1, 00:00:20 ago, via Ethernet0/1 Route metric is 1536000, traffic share count is 1 Total delay is 2000 microseconds, minimum bandwidth is 10000 Kbit Reliability 100/255, minimum MTU 1500 bytes Loading 100/255, Hops 1 Route tag 1.1.1.1</pre>			
	The following sample output from the <b>show ip route tag</b> command displays detailed information about route tag entries with the wild card mask. The route tag entries in this output are displayed in dotted-decimal format.			

```
Device# show ip route tag 10.10.10.0 0.0.0.7

     Route metric is 2560512256, traffic share count is 1
     Total delay is 20010 microseconds, minimum bandwidth is 1 Kbit
     Reliability 1/255, minimum MTU 1 bytes
     Loading 1/255, Hops 1
     Route tag 10.10.10.2
```

The table below describes the significant fields shown in the displays.

Table 19: show	ip route tag	Field Descriptions

Field	Description	
Known via	Indicates how the route was derived.	
Redistributing via	Indicates the redistribution protocol.	
Last update from	Indicates the interface on which the last update arrived.	
Routing Descriptor Blocks	Displays the next-hop IP address followed by the information source.	
Route metric	Displays the best metric for this routing descriptor block.	
Total Delay	Displays the total delay of the route.	
Reliability	Indicates the reliability of the link.	

Field	Description	
Loading	Displays the total load on the link.	
Route tag	Displays the tag of the prefix or network.	

Related Cor	nmands
-------------	--------

Command	Description	
show ipv6 route tags	Displays route tag entries for IPv6 routes.	

## show ipv6 eigrp events

To display Enhanced Interior Gateway Routing Protocol (EIGRP) events logged for IPv6, use the **show ipv6** eigrp events command in user EXEC or privileged EXEC mode.

show ipv6 eigrp events [{[{errmsg|sia}] [event-num-start event-num-end]|type}]

	errmsg		(Optional) Displays error messages being logged.		
	sia		(Optional) Displays Stuck In Active (SIA) messages. (Optional) Starting number of the event range. The range is from 1 to 4294967295.		
	event-nur	n-start			
	event-nur	n-end	(Optional) Ending number of the event range. The range is from 1 to 4294967295.		
	type		(Optional) Displays event types being logged.		
Command Default	If no even	t range	is specified, information for all IPv6 EIGRP events is displayed.		
Command Modes	des User EXEC (>)				
	Privileged EXEC (#)

<b>Related Commands</b>	Command	Description
	clear ipv6 eigrp	Deletes entries from EIGRP for IPv6 routing tables.
	debug ipv6 eigrp	Displays information about EIGRP for IPv6 protocol.
	ipv6 eigrp	Enables EIGRP for IPv6 on a specified interface.

# show ipv6 eigrp interfaces

To display information about interfaces configured for the Enhanced Interior Gateway Routing Protocol (EIGRP) in IPv6 topologies, use the **show ipv6 eigrp interfaces** command in user EXEC or privileged EXEC mode.

show ipv6 eigrp [as-number] interfaces [type number] [detail]

Syntax Description	as-number	(Optional) Autonomous system number.
	type	(Optional) Interface type. For more information, use the question mark (?) online help function.
	number	(Optional) Interface number. For more information about the numbering syntax for your networking device, use the question mark (?) online help function.
	detail (Optional) Displays detailed interface information.	

#### **Command Modes**

User EXEC (>)

Privileged EXEC (#)

Command History	Release	Modification
	12.4(6)T	This command was introduced.
	12.2(33)SRB	This command was integrated into Cisco IOS Release 12.2(33)SRB.
	12.2(33)SXH	This command was integrated into Cisco IOS Release 12.2(33)SXH.
	Cisco IOS XE Release 2.1	This command was implemented on Cisco ASR 1000 Series Aggregation Services Routers.
	15.2(1)8	This command was integrated into Cisco IOS Release 15.2(1)S. Information about the Equal Cost Multipath (ECMP) mode was included in the command output.
	Cisco IOS XE Release 3.5S	This command was modified. Information about the ECMP mode was included in the command output.
	15.2(3)T	This command was modified. Information about the ECMP mode was included in the command output.

#### **Usage Guidelines**

Use the **show ipv6 eigrp interfaces** command to determine the interfaces on which EIGRP is active and to get information about EIGRP processes related to those interfaces. The optional *type number* argument and the **detail** keyword can be entered in any order.

If an interface is specified, only that interface is displayed. Otherwise, all interfaces on which EIGRP is running are displayed.

If an autonomous system is specified, only the routing process for the specified autonomous system is displayed. Otherwise, all EIGRP processes are displayed.

**Examples** 

The following is sample output from the **show ipv6 eigrp interfaces** command:

Device# show ipv6 eigrp 1 interfaces

IPv6-EIGRP	interface	es for process	1			
		Xmit Queue	Mean	Pacing Time	Multicast	Pending
Interface	Peers	Un/Reliable	SRTT	Un/Reliable	Flow Timer	Routes
Et0/0	0	0/0	0	0/10	0	0

The following is sample output from the show ipv6 eigrp interfaces detail command:

Device# show ipv6 eigrp interfaces detail

IPv6-EIGRP interfaces for process 1 Xmit Queue Mean Pacing Time Multicast Un/Reliable SRTT Un/Reliable Flow Timer Pending Interface Peers Flow Timer Routes Et0/0 0 0/0 0 0/100 0 Hello interval is 5 sec Next xmit serial <none> Un/reliable mcasts: 0/0 Un/reliable ucasts: 0/0 Mcast exceptions: 0 CR packets: 0 ACKs suppressed: 0 Retransmissions sent: 0 Out-of-sequence rcvd: 0 Authentication mode is not set

The following sample output from the **show ipv6 eigrp interface detail** command displays detailed information about a specific interface on which the **no ipv6 next-hop self** command is configured with the **no-ecmp-mode** option:

```
Device# show ipv6 eigrp interfaces detail tunnel 0
EIGRP-IPv6 Interfaces for AS(1)
                     Xmit Queue PeerQ
                                             Mean
                                                   Pacing Time Multicast Pending

  Authentication mode is not set
```

The table below describes the significant fields shown in the displays.

Table 20: show ipv6 eigrp interfaces Field Descriptions

Field	Description
Interface	Interface over which EIGRP is configured.
Peers	Number of directly connected EIGRP neighbors.

I

Field	Description
Xmit Queue Un/Reliable	Number of packets remaining in the Unreliable and Reliable transmit queues.
Mean SRTT	Mean smooth round-trip time (SRTT) interval (in seconds).
Pacing Time Un/Reliable	Pacing time (in seconds) used to determine when EIGRP packets (unreliable and reliable) should be sent out of the interface.
Multicast Flow Timer	Maximum number of seconds in which the device will send multicast EIGRP packets.
Pending Routes	Number of routes in the transmit queue waiting to be sent.
Hello interval is 5 sec	Length (in seconds) of the hello interval.

### show ipv6 eigrp neighbors

To display the neighbors discovered by Enhanced Interior Gateway Routing Protocol (EIGRP) for IPv6, use the **show ipv6 eigrp neighbors** command in user EXEC or privileged EXEC mode.

show ipv6 eigrp neighbors [{interface-typeas-number | static | detail}]

Syntax Description	interface-type	(Optional) Interface type.
as-number (Optiona		(Optional) Autonomous system number.
	static	(Optional) Displays static routes.
	detail	(Optional) Displays detailed neighbor information.

#### **Command Modes**

User EXEC Privileged EXEC

Command History	Release	Modification				
	12.4(6)T	This command was introduced.				
	12.2(33)SRB	This command was integrated into Cisco IOS Release 12.2(33)SRB.				
	12.2(33)SXH	This command was integrated into Cisco IOS Release 12.2(33)SXH.				
	Cisco IOS XE Release 2.1	This command was introduced on Cisco ASR 1000 Series Routers.				

**Usage Guidelines** Use the **show ipv6 eigrp neighbors** command to determine when neighbors become active and inactive. It is also useful for debugging certain types of transport problems.

Examples

The following is sample output from the **show ipv6 eigrp neighbors**command:

Router <b># show ipv6 eigrp</b> : IPv6-EIGRP neighbors for	2						
H Address	Interface	Hold (sec)	Uptime	SRTT (ms)	RTO	Q Cnt	Seq Num
0 Link-local address: FE80::A8BB:CCFF:FE00:200	Et0/0	14	00:00:1	.3 11	200	0	2

The table below describes the significant fields shown in the display.

#### Table 21: show ipv6 eigrp neighbors Field Descriptions

Field	Description
process 1	Autonomous system number.
Address FE80::A8BB:CCFF:FE00:200	IPv6 address of the EIGRP peer.

Field	Description
Interface	Interface on which the router is receiving hello packets from the peer.
Hold	Length of time (in seconds) that the Cisco IOS software will wait to hear from the peer before declaring it down. If the peer is using the default hold time, this number will be less than 15. If the peer configures a nondefault hold time, the nondefault hold time will be displayed.
Uptime	Elapsed time (in hours:minutes:seconds) since the local router first heard from this neighbor.
SRTT (ms)	Smoothed round-trip time (SRTT). The number of milliseconds required for an EIGRP packet to be sent to this neighbor and for the local router to receive an acknowledgment of that packet.
RTO	Retransmission timeout (in milliseconds). This is the amount of time the software waits before resending a packet from the retransmission queue to a neighbor.
Q count	Number of EIGRP packets (update, query, and reply) that the software is waiting to send.
Seq Num	Sequence number of the last update, query, or reply packet that was received from this neighbor.

The following is sample output from the **show ipv6 eigrp neighbors**command with the **detail** keyword:

Router# show ipv6 eigrp ne:	ighbors detail						
IPv6-EIGRP neighbors for p	rocess 1						
H Address	Interface	Hold	Uptime	SRTT	RTO	Q	Seq
		(sec)		(ms)		Cnt	Num
0 Link-local address:	Et0/0	11	00:00:30	11	200	0	2
FE80::A8BB:CCFF:FE00:200							
Version 12.4/1.2, Retrans:	0, Retries: 0						

The table below describes the significant fields shown in the display.

Table 22: show ipv6 eigrp neighbors detail Field Descriptions

Field	Description
Н	This column lists the order in which a peering session was established with the specified neighbor. The order is specified with sequential numbering starting with 0.
Version	The software version that the specified peer is running.
Retrans	The number of times that a packet has been retransmitted.
Retries	The number of times an attempt was made to retransmit a packet.

The following is sample output from the show ipv6 eigrp neighbors command with the static keyword:

Router# show ipv6 eigrp neighbors static

I

IPv6-EIGRP neighbors for process 1 Static Address Interface Link-local address: Ethernet0/0 FE80::A8BB:CCFF:FE00:200

# show ipv6 eigrp topology

15.2(3)T

To display Enhanced Interior Gateway Routing Protocol (EIGRP) IPv6 topology table entries, use the **show ipv6 eigrp topology** command in user EXEC or privileged EXEC mode.

show ipv6 eigrp topology [{as-number ipv6-address}] [{active | all-links | pending | summary | zero-successors}]

Syntax Description	as-number	(Optional) Autonomous system number.		
	ipv6-address	(Optional) IPv6 address.		
	active	(Optional) Displays only active entries in the EIGRP topology table.		
	all-links	(Optional) Displays all entries in the EIGRP topology table (including nonfeasible-successor sources).		
	pending	(Optional) Displays all entries in the EIGRP topology table that are either waiting for update from a neighbor or waiting to reply to a neighbor.		
summary (Optional) Displays a su		(Optiona	al) Displays a summary of the EIGRP topology table.	
	zero-successors	(Optional) Displays the available routes that have zero successors.		
Command History	Release		Modification	
Command History	Release		Modification	
	12.4(6)T		This command was introduced.	
	12.2(33)SRB		This command was integrated into Cisco IOS Release 12.2(33)SRB.	
	12.2(33)SXH		This command was integrated into Cisco IOS Release 12.2(33)SXH.	
	15.2(1)S		This command was integrated into Cisco IOS Release 15.2(1)S. Information about the Equal Cost Multipath (ECMP) mode was included in the command output.	
	Cisco IOS XE Release 3.5S		This command was integrated into Cisco IOS XE Release 3.5S.	
	15.2(2)8		This command was modified. The output of the command was enhanced to display route tag values in dotted-decimal format.	
	Cisco IOS XE Release 3.6S		This command was modified. The output of the command was enhanced to	

display route tag values in dotted-decimal format.

(ECMP) mode was included in the command output.

This command was modified. Information about the Equal Cost Multipath

# Usage Guidelines If this command is used without any keywords or arguments, only routes that are feasible successors are displayed. The **show ipv6 eigrp topology** command can be used to determine Diffusing Update Algorithm (DUAL) states and to debug possible DUAL problems.

#### **Examples**

The following is sample output from the **show ipv6 eigrp topology** command. The fields in the display are self-explanatory.

Device# show ipv6 eigrp topology

```
IPv6-EIGRP Topology Table for AS(1)/ID(2001:0DB8:10::/64)
Codes: P - Passive, A - Active, U - Update, Q - Query, R - Reply,
r - reply Status, s - sia Status
P 2001:0DB8:3::/64, 1 successors, FD is 281600
via Connected, Ethernet1/0
```

The following sample output from the **show ipv6 eigrp topology** *prefix* command displays ECMP mode information when the **no ipv6 next-hop-self** command is configured without the **no-ecmp-mode** option in the EIGRP topology. The ECMP mode provides information about the path that is being advertised. If there is more than one successor, the top most path will be advertised as the default path over all interfaces, and the message "ECMP Mode: Advertise by default" will be displayed in the output. If any path other than the default path is advertised, the message "ECMP Mode: Advertise out <Interface name>" will be displayed. The fields in the display are self-explanatory.

#### Device# show ipv6 eigrp topology 2001:DB8:10::1/128

```
EIGRP-IPv6 Topology Entry for AS(1)/ID(192.0.2.100) for 2001:DB8:10::1/128
  State is Passive, Query origin flag is 1, 2 Successor(s), FD is 284160
  Descriptor Blocks:
  FE80::A8BB:CCFF:FE01:2E01 (Tunnel0), from FE80::A8BB:CCFF:FE01:2E01, Send flag is 0x0
      Composite metric is (284160/281600), route is Internal
      Vector metric:
        Minimum bandwidth is 10000 Kbit
        Total delay is 1100 microseconds
        Reliability is 255/255
        Load is ½55
        Minimum MTU is 1400
        Hop count is 1
        Originating router is 10.10.1.1
      ECMP Mode: Advertise by default
FE80::A8BB:CCFF:FE01:3E01 (Tunnel1), from FE80::A8BB:CCFF:FE01:3E01, Send flag is 0x0
      Composite metric is (284160/281600), route is Internal
      Vector metric:
        Minimum bandwidth is 10000 Kbit
        Total delay is 1100 microseconds
        Reliability is 255/255
        Load is ½55
       Minimum MTU is 1400
        Hop count is 1
        Originating router is 10.10.2.2
      ECMP Mode: Advertise out Tunnel1
```

Related Commands	Command	Description
	show eigrp address-family topology	Displays entries in the EIGRP topology table.

### show ipv6 eigrp traffic

To display the number of Enhanced Interior Gateway Routing Protocol (EIGRP) for IPv6 packets sent and received, use the **show ipv6 eigrp traffic** command in user EXEC or privileged EXEC mode.

show ipv6 eigrp traffic [as-number]

### **Command Modes**

User EXEC Privileged EXEC

Command History	Release	Modification
	12.4(6)T	This command was introduced.
	12.2(33)SRB	This command was integrated into Cisco IOS Release 12.2(33)SRB.
	12.2(33)SXH	This command was integrated into Cisco IOS Release 12.2(33)SXH.

Use the show ipv6 eigrp traffic command to provide information on packets received and sent.

#### **Examples**

The following is sample output from the **show ipv6 eigrp traffic** command:

```
Router# show ipv6 eigrp traffic
IPv6-EIGRP Traffic Statistics for process 9
Hellos sent/received: 218/205
Updates sent/received: 7/23
Queries sent/received: 2/0
Replies sent/received: 0/2
Acks sent/received: 21/14
```

The table below describes the significant fields shown in the display.

Field	Description
process 9	Autonomous system number specified in the <b>ipv6 router eigrp</b> command.
Hellos sent/received	Number of hello packets sent and received.
Updates sent/received	Number of update packets sent and received.
Queries sent/received	Number of query packets sent and received.
Replies sent/received	Number of reply packets sent and received.
Acks sent/received	Number of acknowledgment packets sent and received.

I

Related Commands	Command	Description
	ipv6 router eigrp	Configures the EIGRP for IPv6 routing process.

# show ipv6 route tag

To display route tag entries for IPv6 routes, use the **show ipv6 route tag** command in user EXEC or privileged EXEC mode.

show ipv6 route tag {tag-value | tag-value-dotted-decimal [{mask}]}

Syntax Description	tag-value	Route tag value in plain decimals. The range is from 1 to 4294967295.		
	tag-value-dotted-decimal	Route tag value in dotted decimals. The ran	ge is from 0.0.0.0 to 255.255.255.255.	
	mask	(Optional) Route tag wildcard mask.		
Command Modes	User EXEC (>)			
	Privileged EXEC (#)			
Command History	Release		Modification	
	15.2(2)S		This command was introduced.	
	Cisco IOS XE Release 3.6	S	This command was integrated into Cisco IOS XE Release 3.6S.	
	15.2(4)M		This command was integrated into Cisco IOS Release 15.2(4)M.	
Usage Guidelines	Route tags are 32-bit values as either plain decimals or c	attached to routes. They are used to filter ro dotted decimals.	utes. You can display route tag entries	
Examples	The following sample output from the <b>show ipv6 route tag</b> command displays detailed information about route tag entries in the routing table. Route tag values in this output are displayed in dotted-decimal format.			
	Device# show ipv6 route tag 0.0.10.10			
	<pre>IPv6 Routing Table - default - 4 entries Codes: C - Connected, L - Local, S - Static, U - Per-user Static route B - BGP, R - RIP, H - NHRP, I1 - ISIS L1 I2 - ISIS L2, IA - ISIS interarea, IS - ISIS summary, D - EIGRP EX - EIGRP external, ND - ND Default, NDp - ND Prefix, DCE - Destination NDr - Redirect, 1 - LISP O - OSPF Intra, OI - OSPF Inter, OE1 - OSPF ext 1, OE2 - OSPF ext 2 ON1 - OSPF NSSA ext 1, ON2 - OSPF NSSA ext 2 R 2001:DB8::/96 [120/2] Tag 0.0.10.10 via FE80::A8BB:CCFF:FE00:A00, Ethernet0/0</pre>			
	The following sample output from the <b>show ipv6 route tag</b> command displays detailed information about route tag entries with the wild card mask. Route tag values in this output are displayed in dotted-decimal format.			

```
Device# show ipv6 route tag 0.0.0.10 0.0.0.7
IPv6 Routing Table - default - 4 entries
Codes: C - Connected, L - Local, S - Static, U - Per-user Static route
B - BGP, R - RIP, H - NHRP, I1 - ISIS L1
I2 - ISIS L2, IA - ISIS interarea, IS - ISIS summary, D - EIGRP
EX - EIGRP external, ND - ND Default, NDp - ND Prefix, DCE - Destination
NDr - Redirect, 1 - LISP
O - OSPF Intra, OI - OSPF Inter, OE1 - OSPF ext 1, OE2 - OSPF ext 2
ON1 - OSPF NSSA ext 1, ON2 - OSPF NSSA ext 2
R 2001:DB8::/32 [0/0]
Tag 0.0.0.10
via FE80::A8BB:CCFF:FE00:A00, Ethernet0/0
```

The table below describes the significant fields in the displays.

Field	Description
Codes	Indicates the protocol that derived the route. It can be one of the following values:
	• B—BGP derived
	• C—Connected
	D—Enhanced Interior Gateway Routing Protocol (EIGRP)
	• EX—EIGRP external
	• H—NHRP
	• i—IS-IS derived
	• L—Local
	• O—Open Shortest Path First (OSPF) derived
	P—Periodic downloaded static route
	• R—Routing Information Protocol (RIP) derived
	• S—Static
	• U—Per-user static route
2001:DB8::/96 [120/2]	Indicates the address of the remote network.
Tag	Identifies the tag associated with the remote network.
via FE80::A8BB:CCFF:FE00:A00	Specifies the IPv6 address of the next router to the remote network.
Ethernet0/0	Specifies the interface through which the specified network can be reached.

#### **Related Commands**

Command	Description
show ip route tag	Displays route tag entries for IPv4 routes.

# show route-tag list

To display information about route tag lists configured on the router, use the **show route-tag list** command in user EXEC or privileged EXEC mode.

show route-tag list[{list-name}]

Syntax Description	list-name	Name of a specific route tag list.		
Command Default	If this command is used without the <i>list-name</i> argume the router are displayed.	ent, information about all route tag lists configured on		
Command Modes	User EXEC (>)

Command	Description	
address-family (EIGRP)	Enters address-family configuration mode to configure an EIGRP routing instance.	
af-interface	Enters address-family interface configuration mode to configure interface-specific EIGRP commands.	
router eigrp	Configures the EIGRP address-family process.	

## split-horizon (EIGRP)

To enable Enhanced Interior Gateway Routing Protocol (EIGRP) split-horizon, use the **split-horizon** command in address-family interface configuration mode or service-family interface configuration mode. To disable EIGRP split-horizon, use the **no** form of this command.

split-horizon no split-horizon

Syntax Description This command has no arguments or keywords.

**Command Default** EIGRP split-horizon is enabled by default. However, for ATM interfaces and subinterfaces **split-horizon** is disabled by default.

**Command Modes** Address-family interface configuration (config-router-af-interface) Service-family interface configuration (config-router-sf-interface)

Command History	Release	Modification
	15.0(1)M	This command was introduced.
	12.2(33)SRE	This command was integrated into Cisco IOS Release 12.2(33)SRE.
	12.2(33)XNE	This command was integrated into Cisco IOS Release 12.2(33)XNE.
	Cisco IOS XE Release 2.5	This command was integrated into Cisco IOS XE Release 2.5.
	12.2(33)SXI4	This command was integrated into Cisco IOS Release 12.2(33)SXI4.

**Usage Guidelines** The split-horizon rule prohibits a router from advertising a route through an interface that the router itself uses to reach the destination. The following are general rules for EIGRP split-horizon:

- · Split-horizon behavior is turned on by default.
- When you change the EIGRP split-horizon setting on an interface, all adjacencies with EIGRP neighbors reachable over that interface are reset.
- Split-horizon should typically be disabled only on non-broadcast multi-access interfaces.
- The EIGRP split-horizon behavior is not controlled or influenced by the ip split-horizon command.

To configure split-horizon for an EIGRP address family, use the **split-horizon**command in address-family interface configuration mode.

To configure split-horizon for an EIGRP service family, use the **split-horizon** command in service-family interface configuration mode.

**Examples** The following example disables EIGRP split-horizon for serial interface 3/0 in address-family 5400:

Router(config)# router eigrp virtual-name
Router(config-router)# address-family ipv4 autonomous-system 5400

Router(config-router-af)# af-interface serial3/0
Router(config-router-af-interface)# no split-horizon

The following example disables EIGRP split-horizon for serial interface 3/0 in service-family 5400:

```
Router(config)# router eigrp virtual-name
Router(config-router)# service-family ipv4 autonomous-system 5400
Router(config-router-sf)# sf-interface serial3/0
Router(config-router-sf-interface)# no split-horizon
```

sf-interface         Configures interface-specific commands under service-family configures.		

### stub

~ ` `
· · ·

**Note** Effective with Cisco IOS Release 15.0(1)M and 12.2(33)SRE, the **stub** command was replaced by the **eigrp stub**command. See the **eigrp stub** command for more information.

To configure a router as a stub using Enhanced Interior Gateway Routing Protocol (EIGRP), use the **stub** command in router configuration mode. To disable the EIGRP stub routing feature, use the **no** form of this command.

stub [{receive-only | connected | static | summary | redistributed}]
no stub [{receive-only | connected | static | summary | redistributed}]

Syntax Description	receive-only	(Optional) Sets the router as a receive-only neighbor.
	connected	(Optional) Advertises connected routes.
	static	(Optional) Advertises static routes.
<b>summary</b> (Optional) Advertises summary routes.		(Optional) Advertises summary routes.
redistributed (Optional) Advertises redis		(Optional) Advertises redistributed routes from other protocols and autonomous systems.

### **Command Default** Stub routing is not enabled.

Command Modes Route

**Command History** 

Router configuration (config-router)

 Release	Modification
12.4(6)T	This command was introduced.
12.2(33)SRB	This command was integrated into Cisco IOS Release 12.2(33)SRB.
12.2(33)SXH	This command was integrated into Cisco IOS Release 12.2(33)SXH.
15.0(1)M	This command was replaced by the eigrp stubcommand.
12.2(33)SRE	This command was replaced by the <b>eigrp stub</b> command.

### **Usage Guidelines**

Use the **stub** command to configure a router as a stub where the router directs all IPv6 traffic to a distribution router.

The **stub** command can be modified with keywords, and more than one keyword can be used in the same syntax. These options can be used in any combination, except for the **receive-only** keyword. The **receive-only** keyword will restrict the router from sharing any of its routes with any other router in that EIGRP autonomous system, and the **receive-only** keyword will not permit any other option to be specified because it prevents any type of route from being sent. The **connected**, **static**, **summary**, and **redistributed** keywords can be used in any combination but cannot be used with the **receive-only** keyword.

If any of these four keywords is used with the **stub** command, only the route types specified by the particular keywords will be sent. Route types specified by the nonused keywords will not be sent.

The **connected** keyword permits the EIGRP stub routing feature to send connected routes. If the connected routes are not covered by a network statement, it may be necessary to redistribute connected routes with the **redistribute connected** command under the EIGRP process. This option is enabled by default.

The **static** keyword permits the EIGRP stub routing feature to send static routes. Without the configuration of this option, EIGRP will not send any static routes, including internal static routes that normally would be automatically redistributed. It will still be necessary to redistribute static routes with the **redistribute static**command.

The **summary** keyword permits the EIGRP stub routing feature to send summary routes. Summary routes can be created manually with the **ipv6 summary address eigrp** command or automatically at a major network border router with the **auto-summary** command enabled. This option is enabled by default.

The **redistributed** keyword permits the EIGRP stub routing feature to send other routing protocols and autonomous systems. Without the configuration of this option, EIGRP will not advertise redistributed routes.

Note

Multiaccess interfaces such as ATM, Ethernet, Frame Relay, ISDN PRI, and X.25 are supported by the EIGRP stub routing feature only when all routers on that interface, except the hub, are configured as stub routers.

```
Examples
```

stub

In the following example, the **stub** command is used to configure the router as a stub that advertises connected and summary routes:

```
ipv6 router eigrp 1
network 3FEE:12E1:2AC1:EA32::/64
stub
```

In the following example, the **stub** command is issued with the **connected** and **static** keywords to configure the router as a stub that advertises connected and static routes (sending summary routes will not be permitted):

```
ipv6 router eigrp 1
network 3FEE:12E1:2AC1:EA32::/64
stub connected static
```

In the following example, the **stub** command is issued with the **receive-only** keyword to configure the router as a receive-only neighbor (connected, summary, and static routes will not be sent):

```
ipv6 router eigrp 1
network 3FEE:12E1:2AC1:EA32::/64 eigrp
stub receive-only
```

In the following example, the **stub** command is issued with the **redistributed** keyword to configure the router to advertise other protocols and autonomous systems:

```
ipv6 router eigrp 1
network 3FEE:12E1:2AC1:EA32::/64 eigrp
stub redistributed
```

### **Related Commands**

nds	Command	Description
	auto-summary (EIGRP)	Allows automatic summarization of subnet routes into network-level routes.
	ipv6 summary-address eigrp	Configures a summary aggregate address for a specified interface.
	redistribute (IPv6)	Redistributes IPv6 routes from one routing domain into another routing domain.

### summary-address (EIGRP)

To configure a summary address for Enhanced Interior Gateway Routing Protocol (EIGRP), use the **summary-address**(EIGRP) command in address-family interface configuration mode. To remove an EIGRP summary address, use the **no** form of this command.

**summary-address** *ip-address mask* [*administrative-distance* [**leak-map** *leak-map-name*]] **no summary-address** *ip-address mask* [*administrative-distance* [**leak-map** *leak-map-name*]]

		The following is default behavior if an incomplete configuration is entered:			

• If the **leak-map** keyword is configured but the access list does not exist or the route map does not reference the access list, the summary address and all component routes are sent.

**Examples** The following example shows how to configure an EIGRP summary address:

```
Router(config)# router eigrp virtual-name
Router(config-router)# address-family ipv4 autonomous-system 4453
Router(config-router-af)# af-interface ethernet0/0
Router(config-router-af-interface)# summary-address 192.168.0.0 255.255.0.0 95
```

Related Commands	Command	Description
	address-family (EIGRP)	Enters address-family configuration mode to configure an EIGRP routing instance.
	af-interface	Enters address-family interface configuration mode to configure interface-specific EIGRP commands.
	auto-summary (EIGRP)	Allow automatic summarization of subnet routes into network-level routes.
	router eigrp	Configures the EIGRP address-family process.

# summary-metric

To configure a fixed metric for an Enhanced Interior Gateway Routing Protocol (EIGRP) summary aggregate address, use the **summary-metric** command in address family topology configuration mode. To remove a configured metric, use the **no** form of this command.

**summary-metric** *network-address subnet-mask* {*bandwidth delay reliability load mtu* [**distance** *administrative-distance*] | **distance** *administrative-distance*} **no summary-metric** *network-address subnet-mask* 

Syntax Description	network-address	IP summary aggregate address to apply to an interface.			
	subnet-mask	Subnet mask.			
	bandwidth	Minimum bandwidth of the router, in kilobits per second. Valid values are 0 or any positive integer.			
	delay	Route delay, in tens of microseconds. Valid values are 0 or any positive number that is a multiplier of 39.1 nanoseconds.			
	reliability	Likelihood of a successful packet transmission that is expressed as a number between 0 and 255, where 255 is 100 percent reliability and 0 is no reliability.			
	load	Effective load of the route that is expressed as a number from 0 to 255, where 255 is 100 percent load.			
	mtu	Maximum transmission unit (MTU) size of the route, in bytes. Valid values are 0 or any positive integer.			
	distance administrative-distance	Specifies the administrative distance. Valid range is 1 to 255.			
Command Default	EIGRP summary aggregate addresses do not have a fixed metric.				
Command Modes	Address family topology conf	iguration (config-router-af-topology)			
Command History	Release	Modification			
	12.2(33)SRE	This command was introduced.			
	Cisco IOS XE Release 2.5	This command was integrated into Cisco IOS XE Release 2.5.			
	15.0(1)M	This command was integrated into Cisco IOS Release 15.0(1)M.			
	Cisco IOS XE Release 3.2S	This command was modified. The <b>distance</b> keyword and <i>administrative-distance</i> argument were added.			
	12.2(33)SXJ	This command was modified. The summary address is not advertised to the peer if the administrative distance is configured as 255.			
		This command was integrated into Cisco IOS Release 15.1(1)SG.			

	Release	Modification			
	Cisco IOS XE Release 3.2SG	This command was integrated into Cisco IOS XE Release 3.3SG.			
Usage Guidelines	When EIGRP creates a summary route, it includes a metric with the route in order to advertise it. EIGRP searches for components of the summary to be suppressed and represented by the summary. EIGRP finds the component with the best metric and copies the metric from the component into the summary. Components of the summary may change often, which means that every time the best component metric changes, the summary needs to be readvertised to all its peers. Even if the best component metric is not the one that changed, EIGRP still has to search every topology entry to make sure the summary is not affected. This can add a significant processing overhead.				
	Use the <b>summary-metric</b> command to mitigate this metric churn and processing overhead. Rather than searching for the best component metric, EIGRP uses the values configured using the <b>summary-metric</b> command.				
	The summary address is not ad	lvertised to the peer if the administrative distance is configured as 255.			
	The administrative distance or a set of values with or without the administrative distance is required after the subnet mask. That is, you can configure bandwidth, delay, reliability, load, and MTU with or without the administrative distance, or you can configure only the administrative distance.				
Examples	The following example shows how to configure an EIGRP summary address and sets the bandwidth to 10000, the delay to 10, the reliability to 255, the load to 1, and the MTU to 1500 for the summary address 192.168.0.0/16:				
	Router(config-router-af)# Router(config-router-af-in Router(config-router-af-in Router(config-router-af)#	dress-family ipv4 autonomous-system 4453 af-interface ethernet0/0 nterface)# summary-address 192.168.0.0 255.255.0.0 nterface)# exit			
	In the following example, only 192.168.0.1/24:	the administrative distance is specified for summary address			
	router eigrp 1 summary-metric 192.168.0.1/24 distance 20 ! < Specify admin distance only for 192.168.0.0/24				
	In the following example, for summary address 192.168.1.0/24 a metric is specified, but not the administrative distance:				
	summary-metric 192.168.1 ! < Specify metric only	.0/24 10000 10 255 1 1500 y for 192.168.1.0/24			
	In the following example, for s specified:	summary address 192.168.2.0/24 both the metrics and distance are			

```
summary-metric 192.168.2.0/24 1 1 1 1 1 1 distance 20
! <-- metric and distance for 192.168.2.0/24</pre>
```

In the following example, for summary address 192.168.0.1/24 in VRF vrf1 a different distance is specified:

```
address-family ipv4 vrf vrf1 autonomous-system 2
summary-metric 192.168.0.1/24 distance 55
! <-- different distance for 192.168.0.1/24 in vrf vrf1
```

Related Commands	Command	Description
	address-family (EIGRP)	Enters address family configuration mode to configure an EIGRP routing instance.
	af-interface	Enters address family interface configuration mode to configure interface-specific EIGRP commands.
	ip summary-address	Configures a summary aggregate address for a specified interface.
	router eigrp	Configures the EIGRP address-family routing process.
	summary-address (EIGRP)	Configures a summary address for EIGRP.
	topology (EIGRP)	Configures an EIGRP process to route IP traffic under the specified topology instance and enters address-family topology configuration mode.

### timers active-time

To adjust Enhanced Interior Gateway Routing Protocol (EIGRP) routing wait time, use the **timers active-time** command in router configuration mode or address-family topology configuration mode. To disable this function, use the **no** form of the command.

timers active-time [{*time-limit* | disabled}] no timers active-time

Syntax Description	time-limit	(Optional) EI	GRP active-time limit (in minutes). Valid range is 1 to 65535.		
	disabled	(Optional) Disables the timers and permits the routing wait time to remain active indefinitely.			
Command Default	This comm	and is disabled	by default.		
Command Modes	Router cont	figuration (conf	ig-router) Address-family topology configuration (config-router-af-topology)		
Command History	Release		Modification		
	10.0		This command was introduced.		
	12.4(6)T		Support for IPv6 was added.		
	12.2(33)SH	RB	This command was integrated into Cisco IOS Release 12.2(33)SRB.		
	12.2SX		This command is supported in the Cisco IOS Release 12.2SX train. Support in a specific 12.2SX release of this train depends on your feature set, platform, and platform hardware.		
	15.0(1)M		This command was modified. Address-family topology configuration mode was added. You must enter this command in address-family topology configuration mode for EIGRP named configurations.		
	12.2(33)SF	RE	This command was modified. Address-family topology configuration mode was added. You must enter this command in address-family topology configuration mode for EIGRP named configurations.		
		This command was integrated into Cisco IOS Release 12.2(33)XNE.			
		XE Release 2.5	This command was integrated into Cisco IOS XE Release 2.5.		
Usage Guidelines		P, there are timers that control the time that the router waits (after sending a query) before declaring to be in the stuck in active (SIA) state.			
Examples	In the follo	In the following example, the routing wait time is 200 minutes on the specified route:			
		nfig)# <b>router</b> nfig-router)#	eigrp 5 timers active-time 200		

In the following example, the routing wait time is 200 minutes on the specified address-family route:

```
Router(config)# router eigrp virtual-name
Router(config-router)# address-family ipv4 autonomous-system 4453
Router(config-router-af)# network 10.0.0.0
Router(config-router-af)# topology base
Router(config-router-af-topology)# timers active-time 200
```

In the following example, the routing wait time is indefinite if a route becomes active:

```
Router(config)# router eigrp 5
Router(config-router)# timers active-time disabled
```

In the following example, the routing wait time is indefinite on the specified address-family route:

```
Router(config)# router eigrp virtual-name
Router(config-router)# address-family ipv4 autonomous-system 4453
Router(config-router-af)# network 10.0.0.0
Router(config-router-af)# topology base
Router(config-router-af-topology)# timers active-time disabled
```

In the following example, the routing wait time is 100 minutes on the specified route:

```
Router(config)# ipv6 router eigrp 1
Router(config-router)# timers active-time 100
```

In the following example, the routing wait time is 100 minutes on the specified address-family route:

```
Router(config)# router eigrp virtual-name
Router(config-router)# address-family ipv6 autonomous-system 4453
Router(config-router-af)# topology base
Router(config-router-af-topology)# timers active-time disabled
```

Related Commands	Command	Description
	address-family (EIGRP)	Enters address-family configuration mode to configure an EIGRP routing instance.
	ipv6 router eigrp	Configures the EIGRP IPv6 routing process.
	network (EIGRP)	Specifies the network for an EIGRP routing process.
	router eigrp	Configures the EIGRP address-family process.

	show ipv6 eigrp topology	Displays the IPv6 EIGRP topology table.
	topology (EIGRP)	Configures an EIGRP process to route IP traffic under the specified topology instance and enters address-family topology configuration mode.

### timers graceful-restart purge-time

To set the graceful-restart purge-time timer to determine how long a nonstop forwarding (NSF)-aware router that is running the Enhanced Interior Gateway Routing Protocol (EIGRP) must hold routes for an inactive peer, use the **timers graceful-restart purge-time** command in router configuration, address family configuration, or service-family configuration mode. To return the graceful-restart purge-time timer to the default value, use the **no** form of this command.

### timers graceful-restart purge-time seconds no timers graceful-restart purge-time

Syntax Description	<i>seconds</i> Time, in seconds, for which EIGRP must hold routes for an inactive peer. The range is from 20 to 300. The default is 240.			
Command Default	The defau	llt graceful-restart p	purge-time timer is 240 seconds.	
Command Modes	Router co	nfiguration (config	-router)	
	Address f	amily configuration	n (config-router-af)	
	Service-fa	amily configuration	(config-router-sf)	
Command History	Release		Modification	
	15.0(1)M	[	This command was introduced. This command replaces the <b>timers nsf route-hold</b> command.	
	12.2(33)	SRE	This command was integrated into Cisco IOS Release 12.2(33)SRE.	
	12.2(33)	XNE	This command was integrated into Cisco IOS Release 12.2(33)XNE.	
	Cisco IO	S XE Release 2.5	This command was integrated into Cisco IOS XE Release 2.5.	
	12.2(33)	SXI4	This command was integrated into Cisco IOS Release 12.2(33)SXI4.	
	Cisco IO	S XE Release 3.6S	This command was modified. Support for IPv6 and IPv6 VPN Routing and Forwarding (VRF) was added.	
	15.2(2)S		This command was modified. Support for IPv6 and IPv6 VRF was added.	
	15.2(1)E		This command was integrated into Cisco IOS Release 15.2(1)E.	

**Usage Guidelines** 

The graceful-restart purge-time timer sets the maximum period of time for which the NSF-aware router must hold known routes for an NSF-capable neighbor during a switchover operation or a well-known failure condition. The graceful-restart purge-time timer is configurable so that you can tune network performance and avoid undesired effects, such as null routes if the switchover operation takes too much time. When this timer expires, the NSF-aware router scans the topology table and discards any stale routes, allowing EIGRP peers to find alternate routes instead of waiting during a long switchover operation.

-	Note	The <b>timers nsf signal</b> command	The <b>timers nsf signal</b> command is supported only on platforms that support High Availability.			
Examples		following example shows how to F-aware IPv4 address family:	set the graceful-restart purge-time timer to 60 seconds for an			
	Dev		rtual-name family ipv4 autonomous-system 1 s graceful-restart purge-time 60			
		The following example shows how to set the graceful-restart purge-time timer to 300 seconds for an NSF-aware-service family configuration:				
	Device(config)# router eigrp virtual-name Device(config-router)# service-family ipv4 autonomous-system 4533 Device(config-router-sf)# timers graceful-restart purge-time 300					
	The following example shows how to set the graceful-restart purge-time timer to 200 seconds for an NSF-aware IPv6 address family configuration:					
	Dev		family ipv6 autonomous-system 4 s graceful-restart purge-time 300			
Related Commands	Co	nmand	Description			
		oug eigrp address-family ipv6 tifications	Displays information about EIGRP address family IPv6 event notifications.			
	del	oug eigrp nsf	Displays notifications and information about NSF events for an EIGRP routing process.			
	del	oug ip eigrp notifications	Displays EIGRP events and notifications in the console of the router.			
	nsf	(EIGRP)	Enables EIGRP NSF or EIGRP IPv6 NSF on an NSF-capable router.			

show eigrp neighbors	Displays the neighbors discovered by EIGRP.
show ip protocols	Displays the parameters and the current state of the active routing protocol process.
show ipv6 protocols	Displays the parameters and the current state of the active IPv6 routing protocol process.
timers nsf converge	Sets the maximum time that the restarting router must wait for the end-of-table notification from an NSF-capable or NSF-aware peer.
timers nsf signal	Sets the maximum time for the initial restart period.

### timers nsf converge

To adjust the maximum time that a restarting router must wait for the end-of-table (EOT) notification from a nonstop forwarding (NSF)-capable or NSF-aware peer, use the **timers nsf converge** command in router configuration or address family configuration mode. To return the signal timer to the default value, use the **no** form of this command.

timers nsf converge *seconds* no timers nsf converge

Syntax Description	<i>seconds</i> Time, in seconds, for which a restarting router must wait for an EOT notification. The range is from 60 to 180. The default is 120.					
Command Default	The default converge timer	The default converge timer is 120 seconds.				
Command Modes	Router configuration (config-router)         Address family configuration (config-router-af)					
Command History	Release	Modification				
	12.2(18)S	This command was introduced.				
	12.2(28)SB	This command was integrated into Cisco IOS Release 12.2(28)SB.				
	12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.				
	12.2(33)SXH	This command was integrated into Cisco IOS Release 12.2(33)SXH.				
	15.0(1)M	This command was modified. Support for Address family configuration mode was added.				
	12.2(33)SRE	This command was modified. Support for Address family configuration mode was added.				
	12.2(33)XNE	This command was integrated into Cisco IOS Release 12.2(33)XNE.				
	Cisco IOS XE Release 2.5	This command was integrated into Cisco IOS XE Release 2.5.				
	Cisco IOS XE Release 3.6S	This command was modified. Support for IPv6 and IPv6 VPN Routing and Forwarding (VRF) was added.				
	15.2(2)8	This command was modified. Support for IPv6 and IPv6 VRF was added.				

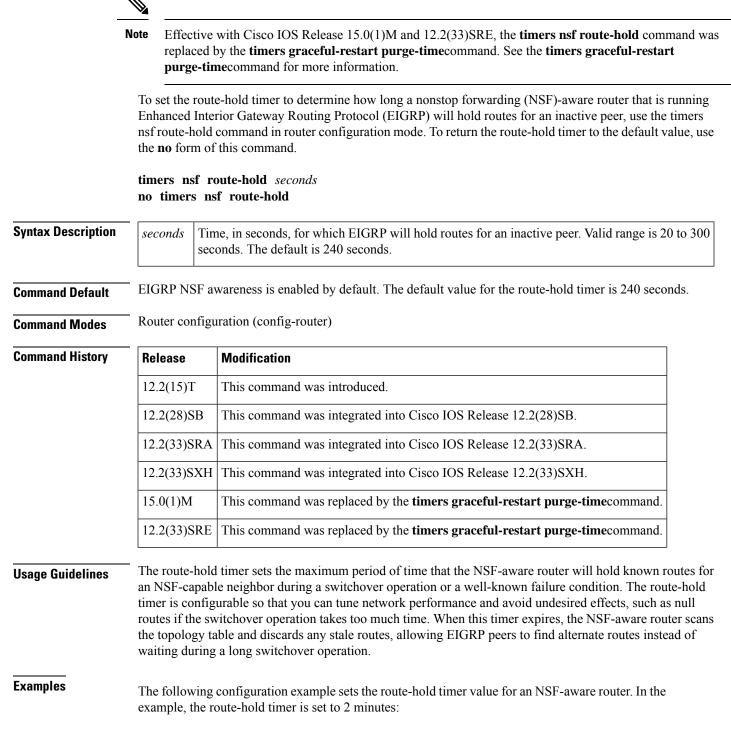

#### Usage Guidelines

The **timers nsf converge** command is entered only on an NSF-capable router to wait for the last EOT update if all startup updates have not been received within the signal timer period. If an EIGRP process discovers no neighbor, or if it has received all startup updates from its neighbor within the signal timer period, the converge timer will not be started.

I

	Note	<b>Note</b> The <b>timers nsf converge</b> command is supported only on platforms that support High Availability.					
Examples		The following example shows how to adjust the converge timer to 60 seconds on an NSF-capable router:					
	Dev	<pre>ice(config)# router eigrp virt ice(config-router)# address-fa ice(config-router-af)# timers</pre>	mily ipv4 autonomous-system 1				
	The	following example shows how to a	djust the converge timer for EIGRP IPv6 NSF:				
	Dev	<pre>ice(config)# router eigrp el ice(config-router)# address-fa ice(config-router-af)# timers</pre>					
Related Commands	Co	mmand	Description				
		bug eigrp address-family ipv6 tifications	Displays information about EIGRP address family IPv6 event notifications.				
	de	bug eigrp nsf	Displays notifications and information about NSF events for an EIGRP routing process.				
	de	bug ip eigrp notifications	Displays information and notifications for an EIGRP routing process.

	15.2(2)8	This command was modified. Support for IPv6 and IPv6 VRF was added.

#### **Usage Guidelines**

The **timers nsf signal** command is entered only on a nonstop forwarding (NSF)-capable router. The EIGRP process starts a signal timer when it is notified of a switchover event. Hello packets with the RS bit set are sent during this period.

The converge timer is used to wait for the last end-of-table (EOT) update if all startup updates have not been received within the signal timer period. If an EIGRP process discovers no neighbor, or if it has received all startup updates from its neighbor within the signal timer period, the converge timer will not be started.

I

-	<b>Note</b> The <b>timers nsf signal</b> command is supported only on platforms that support High Availability.				
Examples	The following example shows how to adjust the signal timer to 30 seconds on an NSF-capable router:				
	Device(config-router)# <b>address-f</b>	Device(config)# router eigrp virtual-name-1 Device(config-router)# address-family ipv4 autonomous-system 1 Device(config-router-af)# timers nsf signal 30			
	The following example shows how to	adjust the signal timer to 30 seconds for EIGRP IPv6 NSF:			
	Device(config)# router eigrp e1 Device(config-router)# address-family ipv6 autonomous-system 1 Device(config-router-af)# timers nsf signal 30				
Related Commands	Command	Description			
	debug eigrp address-family ipv6 notifications	Displays information about EIGRP address family IPv6 event notifications.			
	debug eigrp nsf	Displays notifications and information about NSF events for an EIGRP routing process.			
	debug ip eigrp notifications	Displays information and notifications for an EIGRP routing process.			
	nsf (EIGRP)	Enables EIGRP NSF or EIGRP IPv6 NSF on an NSF-capable router.			
	show eigrp neighbors	Displays the neighbors discovered by EIGRP.			
	show ip protocols	Displays the parameters and the current state of the active routing protocol process.			
	show ipv6 protocols	Displays the parameters and the current state of the active IPv6 routing protocol process.			
	timers graceful-restart purge-time	Sets the graceful-restart purge-time timer to determine how long an NSF-aware router that is running EIGRP must hold routes for an inactive peer.			
	timers nsf converge	Sets the maximum time that the restarting router must wait for the end-of-table notification from an NSF-capable or NSF-aware peer.			

## topology (EIGRP)

To configure an Enhanced Interior Gateway Routing Protocol (EIGRP) process to route IP traffic under the specified topology instance and to enter address-family topology configuration mode, use the **topology** command in address-family configuration mode. To disassociate the EIGRP routing process from the topology instance, use the **no** form of this command.

topology {base | topology-name tid number}
no topology topology-name

Syntax Description	base	Specifies the base topology.		
	topology-name	Topology name. The topology-name argument is case-sensitive.		
	tid number	Specifies	the topology ID number. The range is 1 to 65535.	
Command Default	EIGRP routing processes are not configured to route IP traffic under a topology instance.			
Command Modes	Address-family configuration (config-router-af)			
Command History	Release		Modification	
	12.2(33)SRB		This command was introduced.	
	15.0(1)M		This command was integrated into Cisco IOS Release	15.0(1)M.
	12.2(33)XNE		This command was integrated into Cisco IOS Release	12.2(33)XNE.
	Cisco IOS XE Release 2.5		This command was integrated into Cisco IOS XE Rele	ease 2.5.
Usage Guidelines	The <b>topology</b> command is used in a Multitopology Routing (MTR) configuration to enable an EIGRP process under the specified topology. The <b>topology</b> command is entered under address-family configuration mode. Command configurations are applied only to the topology instance. The topology must be defined globally with the <b>global-address-family</b> command in global address-family configuration mode before the topology can be configured under the EIGRP process.		nily configuration mode. must be defined globally	
	The <b>tid</b> keyword associates an ID with the topology instance. Each topology must be configured with a un topology ID. The topology ID is used to identify and group Network Layer Reachability Information (NI for each topology in EIGRP updates.			
The topology ID must be consistent across devices so that EIGRP can correctly asso			sociate topologies.	
Examples	The following example configures EIGRP process 1 to route traffic for the 192.168.0.0/16 network under the VOICE topology instance:			
	Device(config)# router eigrp 1 Device(config-router)# address-family ipv4 unicast autonomous-system 3 Device(config-router-af)# topology VOICE tid 100 Device(config-router-af-topology)# no auto-summary Device(config-router-af-topology)# network 192.168.0.0 0.0.255.255		3	

Device(config-router-af-topology) # end

### **Related Commands**

Command	Description
clear ip eigrp	Resets EIGRP process and neighbor session information.
global-address-family ipv4	Enters global address family configuration mode to configure MTR.
topology (interface)	Configures an MTR topology instance on an interface.

L

### traffic-share balanced

To c ontrol how traffic is distributed among routes when multiple routes for the same destination network have different costs, use the **traffic-share balanced** command in router configuration mode or address-family topology configuration mode. To disable this function, use the **no** form of the command.

traffic-share balanced no traffic-share balanced

**Syntax Description** This command has no arguments or keywords.

**Command Default** Traffic is distributed proportionately to the ratios of the metrics.

**Command Modes** Router configuration (config-router) Address-family topology configuration (config-router-af-topology)

Command History	Release	Modification
	10.0	This command was introduced.
	12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
	12.2SX	This command is supported in the Cisco IOS Release 12.2SX train. Support in a specific 12.2SX release of this train depends on your feature set, platform, and platform hardware.
	15.0(1)M	This command was modified. Address-family topology configuration mode was added.
	12.2(33)SRE	This command was modified. Address-family topology configuration mode was added.
	12.2(33)XNE	This command was integrated into Cisco IOS Release 12.2(33)XNE.
	Cisco IOS XE Release 2.5	This command was integrated into Cisco IOS XE Release 2.5.
Usage Guidelines		to Enhanced Interior Gateway Routing Protocol (EIGRP). With the default setting, trics represent less-preferable routes and get less traffic.
Examples	In the following example,	traffic is balanced across multiple routes:
	Router(config)# router	eigrp 5

Router(config)# router eigrp 5 Router(config-router)# traffic-share balanced Router(config-router)# variance 1

In the following EIGRP named configuration example, traffic is balanced across multiple routes:

```
Router(config)# router eigrp virtual-name
Router(config-router)# address-family ipv4 autonomous-system 4453
Router(config-router-af)# network 10.0.0.0
Router(config-router-af)# topology base
```

I

Router(config-router-af-topology)# traffic-share balanced
Router(config-router-af-topology)# variance 1

Related Commands	Command	Description
	variance (EIGRP)	Controls load balancing in an EIGRP network.

## variance (EIGRP)

To control load balancing in an internetwork based on the Enhanced Interior Gateway Routing Protocol (EIGRP), use the **variance** command in router configuration mode or address-family topology configuration mode. To reset the variance to the default value, use the **no** form of this command.

variance *multiplier* no variance

Syntax Description	· ·	Metric value used for load balancing. It can be a value from 1 to 128. The default is 1, which means equal-cost load balancing.

**Command Default** EIGRP uses equal-cost load balancing.

**Command Modes** Router configuration (config-router) Address-family topology configuration (config-router-af-topology)

Command History	Release	Modification
	10.0	This command was introduced.
	12.4(6)T	Support for IPv6 was added.
	12.2(33)SRB	This command was integrated into Cisco IOS Release 12.2(33)SRB.
	12.2SX	This command is supported in the Cisco IOS Release 12.2SX train. Support in a specific 12.2SX release of this train depends on your feature set, platform, and platform hardware.
	15.0(1)	This command was modified. Address-family topology configuration mode was added.
	12.2(33)SRE	This command was modified. Address-family topology configuration mode was added.
	12.2(33)XNE	This command was integrated into Cisco IOS Release 12.2(33)XNE.
	Cisco IOS XE Release 2.5	This command was integrated into Cisco IOS XE Release 2.5.

#### **Usage Guidelines**

Setting a variance value enables EIGRP to install multiple loop-free routes with unequal cost in a local routing table. A route learned through EIGRP must meet two criteria to be installed in the local routing table:

- The route must be loop- free. This condition is satisfied when the reported distance is less than the total distance or when the route is a feasible successor.
- The metric of the route must be lower than the metric of the best route (the successor) multiplied by the variance configured on the router.

Thus, if the variance is set to 1, only routes with the same metric as the successor are installed in the local routing table. If the variance is set to 2, any EIGRP-learned route with a metric less than 2 times the successor metric will be installed in the local routing table.

I

	Note	EIGRP does not load-share between multiple routes; it only installs the routes in the local routing table. Then, the local routing table enables switching hardware or software to load-share between the multiple paths.	
Examples	The	e following example sets a variance value of 4:	
		ater(config)# <b>router eigrp 109</b> ater(config-router)# <b>variance 4</b>	
	The	e following example sets a variance value of 4 in address-family topology configuration mode:	
	Router(config)# router eigrp virtual-name Router(config-router)# address-family ipv4 autonomous-system 4453 Router(config-router-af)# network 10.0.0.0 Router(config-router-af)# topology base Router(config-router-af-topology)# variance 4		

### vnet

To override interface configurations on a per-virtual routing and forwarding (VRF) basis, use the **vnet** command in the appropriate configuration mode. To remove VRF-specific configurations, use the **no** form of this command.

vnet {global | name vrf-name}
no vnet {global | name vrf-name}

Syntax Description	helpful wł		e parent interface and subinterfaces to have different configurations. This is hen you have untagged packets arriving on the parent interface; <b>vnet global</b> tions are applied to such packets.	
		Note	Every router has a predefined virtual Network (vNET) known as "vNET global," which refers to the global routing context, corresponds to the default Routing Information Base (RIB), is the default routing table, and carries untagged traffic. By default, interfaces belong to vNET global.	
	name vrf-name	name         vrf-name         Specifies a VRF that is included in the list of VRFs assigned to the interface by the trunk command.		
Command Default	Only vNET global	exists.		
Command Modes	Interface configuration (config-if)			
	Virtual network interface configuration (config-if-vnet)			
	Address family interface configuration (config-router-af-interface)			
Command History	Release		Modification	
	Cisco IOS XE Rel	ease 3.2S	This command was introduced.	
	Cisco IOS XE Release 3.5S		This command was modified. The command was made available in address family interface configuration mode in EIGRP-named mode configurations.	
	15.2(1)8		This command was integrated into Cisco IOS Release 15.2(1)S. and modified. The command was made available in address family interface configuration mode in EIGRP-named mode configurations.	
	15.0(1)SY		This command was integrated into Cisco IOS Release 15.0(1)SY.	
	15.1(1)SG		This command was integrated into Cisco IOS Release 15.1(1)SG.	
	Cisco IOS XE Release 3.3SG		This command was integrated into Cisco IOS XE Release 15.1(1)SG.	
	15.3(2)T		This command was integrated into Cisco IOS Release 15.3(2)T.	

I

Usage Guidelines	This command can be used in interface configuration mode to configure vNET commands on the interface only if the interface is configured as a trunk interface. Any commands entered after the <b>vnet</b> command will be disabled on any interface that does not have the <b>vnet trunk</b> command configured.				
	VRF subinterfaces inherit certain configurations from the parent interface. An example is the <b>ip ospf cost</b> command.				
	Use the <b>vnet</b> command if you want to configure a VRF-specific command that is different from a command configured on the parent interface. Use this command to enter virtual network interface mode and then configure commands that will apply to a specified VRF.				
Examples	The following example using the <b>vnet</b> command shows how to define a VRF instance named vrfl on Gigabit Ethernet interface 1/1/1. The system then enters virtual network interface mode and the user configures the Open Shortest Path First (OSPF) value to 30 that overrides the value inherited by the VRFs on the trunk interface, which had an OSPF cost of 20.				
	<pre>Router(config)# interface gigabitethernet 1/1/1 Router(config-if) vnet trunk Router(config-if) ip address 10.1.2.1 255.255.255.0 Router(config-if) ! Set OSPF cost for all vNETs on this interface to 20. Router(config-if) ip ospf cost 20 Router(config-if) vnet name vrf1 Router(config-if) ! Set OSPF cost for vrf1 to 30. Router(config-if-vnet) ip ospf cost 30 Router(config-if-vnet) exit-if-vnet</pre>				
	The following example using the <b>vnet</b> command shows how to define vrf1 on Gigabit Ethernet interface 1/1/1. The system then enters virtual network interface mode and the user configures the OSPF cost value to 40, which applies to <b>vnet global</b> only.				
	<pre>Router(config)# interface gigabitethernet1/1/1 Router(config-if) vnet trunk Router(config-if) ip address 10.1.2.1 255.255.255.0 Router(config-if) vnet global Router(config-if-vnet) ! Set OSPF cost for global to 40. Router(config-if-vnet) ip ospf cost 40 Router(config-if-vnet) exit-if-vnet</pre>
