

Configuring IP SLAs ICMP Echo Operations

Last Updated: July 18, 2011

This module describes how to configure an IP Service Level Agreements (SLAs) Internet Control Message Protocol (ICMP) Echo operation to monitor end-to-end response time between a Cisco router and devices using IPv4 or IPv6. ICMP Echo is useful for troubleshooting network connectivity issues. This module also demonstrates how the results of the ICMP Echo operation can be displayed and analyzed to determine how the network IP connections are performing.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the Feature Information Table at the end of this document.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Restrictions for IP SLAs ICMP Echo Operations

We recommend using a Cisco networking device as the destination device although any networking device that supports RFC 862, Echo protocol, can be used.

Information About IP SLAs ICMP Echo Operations

- [ICMP Echo Operation, page 2](#)

ICMP Echo Operation

The ICMP Echo operation measures end-to-end response time between a Cisco router and any devices using IP. Response time is computed by measuring the time taken between sending an ICMP Echo request message to the destination and receiving an ICMP Echo reply.

In the figure below ping is used by the ICMP Echo operation to measure the response time between the source IP SLAs device and the destination IP device. Many customers use IP SLAs ICMP-based operations, in-house ping testing, or ping-based dedicated probes for response time measurements.

Figure 1

The IP SLAs ICMP Echo operation conforms to the same IETF specifications for ICMP ping testing and the two methods result in the same response times.

How to Configure IP SLAs ICMP Echo Operations

- [Configuring an ICMP Echo Operation, page 2](#)
- [Scheduling IP SLAs Operations, page 8](#)

Configuring an ICMP Echo Operation

Note

There is no need to configure an IP SLAs responder on the destination device.

Perform one of the following tasks:

- [Configuring a Basic ICMP Echo Operation on the Source Device, page 3](#)
- [Configuring an ICMP Echo Operation with Optional Parameters, page 4](#)

Configuring a Basic ICMP Echo Operation on the Source Device

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **ip sla *operation-number***
4. **icmp-echo** { *destination-ip-address* | *destination-hostname* } [**source-ip** { *ip-address* | *hostname* } | **source-interface** *interface-name*]
5. **frequency *seconds***
6. **end**

DETAILED STEPS

Command or Action	Purpose
<p>Step 1 enable</p> <p>Example:</p> <pre>Router> enable</pre>	<p>Enables privileged EXEC mode.</p> <ul style="list-style-type: none"> • Enter your password if prompted.
<p>Step 2 configure terminal</p> <p>Example:</p> <pre>Router# configure terminal</pre>	<p>Enters global configuration mode.</p>
<p>Step 3 ip sla <i>operation-number</i></p> <p>Example:</p> <pre>Router(config)# ip sla 6</pre>	<p>Begins configuration for an IP SLAs operation and enters IP SLA configuration mode.</p>
<p>Step 4 icmp-echo { <i>destination-ip-address</i> <i>destination-hostname</i> } [source-ip { <i>ip-address</i> <i>hostname</i> } source-interface <i>interface-name</i>]</p> <p>Example:</p> <pre>Router(config-ip-sla)# icmp-echo 172.29.139.134</pre>	<p>Defines an ICMP Echo operation and enters IP SLA ICMP Echo configuration mode.</p>
<p>Step 5 frequency <i>seconds</i></p> <p>Example:</p> <pre>Router(config-ip-sla-echo)# frequency 300</pre>	<p>(Optional) Sets the rate at which a specified IP SLAs operation repeats.</p>

Command or Action	Purpose
Step 6 end Example: Router(config-ip-sla-echo)# end	Exits to privileged EXEC mode.

To add proactive threshold conditions and reactive triggering for generating traps, or for starting another operation, to an IP SLAs operation, see the "Configuring Proactive Threshold Monitoring" section.

Configuring an ICMP Echo Operation with Optional Parameters

Perform this task on the source device.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **ip sla** *operation-number*
4. **icmp-echo** { *destination-ip-address* | *destination-hostname* } [**source-ip** { *ip-address* | *hostname* } | **source-interface** *interface-name*]
5. **history buckets-kept** *size*
6. **history distributions-of-statistics-kept** *size*
7. **history enhanced** [**interval** *seconds*] [**buckets** *number-of-buckets*]
8. **history filter** { **none** | **all** | **overThreshold** | **failures** }
9. **frequency** *seconds*
10. **history hours-of-statistics-kept** *hours*
11. **history lives-kept** *lives*
12. **owner** *owner-id*
13. **request-data-size** *bytes*
14. **history statistics-distribution-interval** *milliseconds*
15. **tag** *text*
16. **threshold** *milliseconds*
17. **timeout** *milliseconds*
18. Do one of the following:
 - **tos** *number*
 - **traffic-class** *number*
19. **flow-label** *number*
20. **verify-data**
21. **vrf** *vrf-name*
22. **end**

DETAILED STEPS

	Command or Action	Purpose
Step 1	<p>enable</p> <p>Example:</p> <pre>Router> enable</pre>	<p>Enables privileged EXEC mode.</p> <ul style="list-style-type: none"> Enter your password if prompted.
Step 2	<p>configure terminal</p> <p>Example:</p> <pre>Router# configure terminal</pre>	<p>Enters global configuration mode.</p>
Step 3	<p>ip sla <i>operation-number</i></p> <p>Example:</p> <pre>Router(config)# ip sla 6</pre>	<p>Begins configuration for an IP SLAs operation and enters IP SLA configuration mode.</p>
Step 4	<p>icmp-echo {<i>destination-ip-address</i> <i>destination-hostname</i>} [source-ip {<i>ip-address</i> <i>hostname</i>} source-interface <i>interface-name</i>]</p> <p>Example:</p> <pre>Router(config-ip-sla)# icmp-echo 172.29.139.134 source-ip 172.29.139.132</pre>	<p>Defines an Echo operation and enters IP SLA Echo configuration mode.</p>
Step 5	<p>history buckets-kept <i>size</i></p> <p>Example:</p> <pre>Router(config-ip-sla-echo)# history buckets-kept 25</pre>	<p>(Optional) Sets the number of history buckets that are kept during the lifetime of an IP SLAs operation.</p>
Step 6	<p>history distributions-of-statistics-kept <i>size</i></p> <p>Example:</p> <pre>Router(config-ip-sla-echo)# history distributions- of-statistics-kept 5</pre>	<p>(Optional) Sets the number of statistics distributions kept per hop during an IP SLAs operation.</p>

Command or Action	Purpose
<p>Step 7 history enhanced [<i>interval seconds</i>] [<i>buckets number-of-buckets</i>]</p> <p>Example:</p> <pre>Router(config-ip-sla-echo)# history enhanced interval 900 buckets 100</pre>	<p>(Optional) Enables enhanced history gathering for an IP SLAs operation.</p>
<p>Step 8 history filter { <i>none</i> <i>all</i> <i>overThreshold</i> <i>failures</i> }</p> <p>Example:</p> <pre>Router(config-ip-sla-echo)# history filter failures</pre>	<p>(Optional) Defines the type of information kept in the history table for an IP SLAs operation.</p>
<p>Step 9 frequency <i>seconds</i></p> <p>Example:</p> <pre>Router(config-ip-sla-echo)# frequency 30</pre>	<p>(Optional) Sets the rate at which a specified IP SLAs operation repeats.</p>
<p>Step 10 history hours-of-statistics-kept <i>hours</i></p> <p>Example:</p> <pre>Router(config-ip-sla-echo)# history hours-of- statistics-kept 4</pre>	<p>(Optional) Sets the number of hours for which statistics are maintained for an IP SLAs operation.</p>
<p>Step 11 history lives-kept <i>lives</i></p> <p>Example:</p> <pre>Router(config-ip-sla-echo)# history lives-kept 5</pre>	<p>(Optional) Sets the number of lives maintained in the history table for an IP SLAs operation.</p>
<p>Step 12 owner <i>owner-id</i></p> <p>Example:</p> <pre>Router(config-ip-sla-echo)# owner admin</pre>	<p>(Optional) Configures the Simple Network Management Protocol (SNMP) owner of an IP SLAs operation.</p>
<p>Step 13 request-data-size <i>bytes</i></p> <p>Example:</p> <pre>Router(config-ip-sla-echo)# request-data-size 64</pre>	<p>(Optional) Sets the protocol data size in the payload of an IP SLAs operation's request packet.</p>

Command or Action	Purpose
<p>Step 14 history statistics-distribution-interval <i>milliseconds</i></p> <p>Example:</p> <pre>Router(config-ip-sla-echo)# history statistics-distribution-interval 10</pre>	<p>(Optional) Sets the time interval for each statistics distribution kept for an IP SLAs operation.</p>
<p>Step 15 tag <i>text</i></p> <p>Example:</p> <pre>Router(config-ip-sla-echo)# tag TelnetPollServer1</pre>	<p>(Optional) Creates a user-specified identifier for an IP SLAs operation.</p>
<p>Step 16 threshold <i>milliseconds</i></p> <p>Example:</p> <pre>Router(config-ip-sla-echo)# threshold 10000</pre>	<p>(Optional) Sets the upper threshold value for calculating network monitoring statistics created by an IP SLAs operation.</p>
<p>Step 17 timeout <i>milliseconds</i></p> <p>Example:</p> <pre>Router(config-ip-sla-echo)# timeout 10000</pre>	<p>(Optional) Sets the amount of time an IP SLAs operation waits for a response from its request packet.</p>
<p>Step 18 Do one of the following:</p> <ul style="list-style-type: none"> • tos <i>number</i> • traffic-class <i>number</i> <p>Example:</p> <pre>Router(config-ip-sla-jitter)# tos 160</pre> <p>Example:</p> <pre>Router(config-ip-sla-jitter)# traffic-class 160</pre>	<p>(Optional) In an IPv4 network only, defines the ToS byte in the IPv4 header of an IP SLAs operation.</p> <p>or</p> <p>(Optional) In an IPv6 network only, defines the traffic class byte in the IPv6 header for a supported IP SLAs operation.</p>
<p>Step 19 flow-label <i>number</i></p> <p>Example:</p> <pre>Router(config-ip-sla-echo)# flow-label 112233</pre>	<p>(Optional) In an IPv6 network only, defines the flow label field in the IPv6 header for a supported IP SLAs operation.</p>

Command or Action	Purpose
Step 20 <code>verify-data</code> Example: <pre>Router(config-ip-sla-echo)# verify-data</pre>	(Optional) Causes an IP SLAs operation to check each reply packet for data corruption.
Step 21 <code>vrf vrf-name</code> Example: <pre>Router(config-ip-sla-echo)# vrf vpn-A</pre>	(Optional) Allows monitoring within Multiprotocol Label Switching (MPLS) Virtual Private Networks (VPNs) using IP SLAs operations.
Step 22 <code>end</code> Example: <pre>Router(config-ip-sla-echo)# end</pre>	Exits to privileged EXEC mode.

To add proactive threshold conditions and reactive triggering for generating traps, or for starting another operation, to an IP SLAs operation, see the "Configuring Proactive Threshold Monitoring" section.

Scheduling IP SLAs Operations

Note

- All IP SLAs operations to be scheduled must be already configured.
- The frequency of all operations scheduled in a multioperation group must be the same.
- List of one or more operation ID numbers to be added to a multioperation group is limited to a maximum of 125 characters, including commas (,).

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. Do one of the following:
 - **ip sla schedule** *operation-number* [**life** {**forever** | *seconds*}] [**start-time** {*hh : mm[: ss]* [*month day* | *day month*] | **pending** | **now** | **after** *hh : mm : ss*}] [**ageout** *seconds*] [**recurring**]
 - **ip sla group schedule** *group-operation-number* *operation-id-numbers* **schedule-period** *schedule-period-range* [**ageout** *seconds*] [**frequency** *group-operation-frequency*] [**life**{**forever** | *seconds*}] [**start-time**{*hh:mm[:ss]* [*month day* | *day month*] | **pending** | **now** | **after** *hh:mm:ss*}]
4. **exit**
5. **show ip sla group schedule**
6. **show ip sla configuration**

DETAILED STEPS

Command or Action	Purpose
<p>Step 1 enable</p> <p>Example:</p> <pre>Router> enable</pre>	<p>Enables privileged EXEC mode.</p> <ul style="list-style-type: none"> Enter your password if prompted.
<p>Step 2 configure terminal</p> <p>Example:</p> <pre>Router# configure terminal</pre>	<p>Enters global configuration mode.</p>
<p>Step 3 Do one of the following:</p> <ul style="list-style-type: none"> ip sla schedule <i>operation-number</i> [life {forever <i>seconds</i>}] [start-time {<i>hh : mm[: ss]</i> [<i>month day</i> <i>day month</i>] pending now after <i>hh : mm : ss</i>}] [ageout <i>seconds</i>] [recurring] ip sla group schedule <i>group-operation-number</i> <i>operation-id-numbers</i> schedule-period <i>schedule-period-range</i> [ageout <i>seconds</i>] [frequency <i>group-operation-frequency</i>] [life{forever <i>seconds</i>}] [start-time{<i>hh:mm[:ss]</i> [<i>month day</i> <i>day month</i>] pending now after <i>hh:mm:ss</i>}] <p>Example:</p> <pre>Router(config)# ip sla schedule 10 start-time now life forever</pre> <p>Example:</p> <pre>Router(config)# ip sla group schedule 1 3,4,6-9</pre>	<p>For individual IP SLAs operations only:</p> <p>Configures the scheduling parameters for an individual IP SLAs operation.</p> <p>or</p> <p>For multioperation scheduler only:</p> <p>Specifies an IP SLAs operation group number and the range of operation numbers to be scheduled in global configuration mode.</p>
<p>Step 4 exit</p> <p>Example:</p> <pre>Router(config)# exit</pre>	<p>Exits to privileged EXEC mode.</p>
<p>Step 5 show ip sla group schedule</p> <p>Example:</p> <pre>Router# show ip sla group schedule</pre>	<p>(Optional) Displays the IP SLAs group schedule details.</p>

Command or Action	Purpose
Step 6 <code>show ip sla configuration</code> Example: Router# <code>show ip sla configuration</code>	(Optional) Displays the IP SLAs configuration details.

- [Troubleshooting Tips, page 10](#)
- [What to Do Next, page 10](#)

Troubleshooting Tips

- If the IP SLAs operation is not running and generating statistics, add the **verify-data** command to the configuration of the operation (while configuring in IP SLA configuration mode) to enable data verification. When enabled, each operation response is checked for corruption. Use the **verify-data** command with caution during normal operations because it generates unnecessary overhead.
- Use the **debugipsla trace** and **debug ip sla error** commands to help troubleshoot issues with an IP SLAs operation.

What to Do Next

To add proactive threshold conditions and reactive triggering for generating traps, or for starting another operation, to an IP SLAs operation, see the "Configuring Proactive Threshold Monitoring" section.

To view and interpret the results of an IP SLAs operation use the **show ip sla statistics** command. Checking the output for fields that correspond to criteria in your service level agreement will help you determine whether the service metrics are acceptable.

Configuration Examples for IP SLAs ICMP Echo Operations

- [Example Configuring an ICMP Echo Operation, page 10](#)

Example Configuring an ICMP Echo Operation

The following example shows how to configure an IP SLAs operation type of ICMP Echo that will start immediately and run indefinitely.

```
ip sla 6
icmp-echo 172.29.139.134 source-ip 172.29.139.132
frequency 300
request-data-size 28
tos 160
timeout 2000
tag SFO-RO
ip sla schedule 6 life forever start-time now
```

Feature Information for IP SLAs ICMP Echo Operations

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Table 1 Feature Information for IP SLAs ICMP Echo Operations

Feature Name	Releases	Feature Information
IP SLAs ICMP Echo Operation	12.2(31)SB2	The Cisco IOS IP SLAs Internet Control Message Protocol (ICMP) echo operation allows you to measure end-to-end network response time between a Cisco device and other devices using IP.
	12.2(33)SRB1	
	12.2(33)SXH	
	12.3(14)T	
	15.0(1)S	
	Cisco IOS XE 3.1.0SG	
IPv6 - IP SLAs (UDP Jitter, UDP Echo, ICMP Echo, TCP Connect)	12.2(33)SB	Support was added for operability in IPv6 networks.
	12.2(33)SRC	
	12.4(20)T	
	Cisco IOS XE 3.1.0SG	
	12.2(50)SY
