VIRTUAL-PLACES

Name/CLI Keyword	virtual-places
Full Name	Virtual Places Chat
Description	Virtual Places Chat is software that uses the paradigm that any web page on the Internet is a chat room, a Virtual Place, if one or more people are viewing the page with the VPchat program. A web browser is an integral part of VPchat. Below the browser window there is a chat pane in which the conversation text is displayed. Below the chat pane is a box for entering text for the conversation. To the right of the browser window is a list of people in the room. In their haste to make money, they separated hundreds of friends who would not pay for chat.

VNC-HTTP

Name/CLI Keyword	vnc-http
Full Name	VNC over HTTP
Description	Virtual Network Computing (VNC) is a graphical desktop sharing system that uses the Remote FrameBuffer protocol (RFB protocol) to remotely control another computer. It transmits the keyboard and mouse events from one computer to another. VNC is platform-independent "a VNC viewer on one operating system may connect to a VNC server on the same or any other operating system". VNC-HTTP establishes a VNC session from a Java-capable browser .The underlying protocol is HTTP.

VPP

Name/CLI Keyword	vpp
Full Name	Virtual Presence Protocol

Description	The Virtual Presence Protocol (VPP) is used to enable the exchange of document based virtual presence information. Virtual presence information is the foundation for virtual neighborhood services which provide users with information about virtual neighbors, i.e. other users who are close within the virtual document space. VPP enables the creation of dynamic vicinities based on hypertext references. It is not meant to replace or supersede presence notification protocols, but it augments online presence with location information. The purpose of presence notification protocols is to tell whether another individual is online or arrives online, etc.
