

## 802.1X and Port Control Commands

---

This module describes the 802.1X and port control commands.

For detailed information about port control using MAC Authentication Bypass (MAB), the related configuration tasks, and examples, see the *Implementing MAC Authentication Bypass* chapter in the *System Security Configuration Guide for Cisco ASR 9000 Series Routers* and *System Security Configuration Guide for Cisco 8000 Series Routers*.

- [dot1x profile](#), on page 5
- [show mab](#), on page 7

# authenticator

To configure authenticator parameters and to enter the authenticator configuration sub mode, use the **authenticator** command in dot1x profile configuration sub mode. To remove this configuration, use the **no** form of this command.

```
authenticator { eap profile profile-name | host-mode { multi-auth | multi-host | single-host }
| server dead action { auth-fail | auth-retry } | timer { mab-retry-time retry-timer-value |
reauth-time { reauth-timer-value | server } } }
```

## Syntax Description

<b>eap</b>	Enables local Extensible Authentication Protocol (EAP) server for MACSec.
<i>profile-name</i>	Specifies the EAP profile name, in WORD.
<b>host-mode</b>	Sets the host mode for authentication. <b>Note</b> Only <b>single-host</b> mode is supported.
<b>server dead action</b>	Sets the action to be taken when the remote AAA server is unreachable. You can set it as either to retry the authentication or to consider it as authentication failure.
<b>timer</b>	Sets various timers for authentication.
<b>mab-retry-time</b>	Sets the interval, in seconds, after which the router re-initiates an authentication attempt for the MAC authentication bypass (MAB) clients, in scenarios where previous authentication failed or if the RADIUS server was unreachable.  Range is 60 to 300, default being 60.
<b>reauth-time</b>	Sets the interval, in seconds, after which the router automatically initiates re-authentication process with the RADIUS server.  Range is 60 to 5184000 (2 months).
<b>server</b>	Sets the re-authentication interval on the router as per the value specified by the RADIUS server.  Minimum expected value is 60 seconds, default being 1 hour.

## Command Default

None

## Command Modes

Dot1x profile configuration mode

## Command History

Release	Modification
Release 7.3.4 Release 7.5.2	This command was modified to include the <b>mab-retry-time</b> timer option as part of the MAB feature.
Release 7.0.12	This command was introduced.

**Usage Guidelines**

No specific guidelines impact the use of this command.

**Task ID**

Task ID	Operations
config-services	read, write

**Examples**

This example shows how to set the authenticator mode as **single-host**:

```
Router# configure
Router(config)# dot1x profile test_profile
Router(config-dot1x-test_profile)# authenticator host-mode single-host
Router(config-dot1x-test_profile)# commit
```

This example shows how to set the authenticator retry timer for MAB clients:

```
Router#configure
Router(config)#dot1x profile test_mab
Router(dot1xx-test_mab)#authenticator timer mab-retry-time 60
Router(dot1xx-test_mab)#commit
```

**Related Commands**

Command	Description
<a href="#">dot1x profile, on page 5</a>	Configures IEEE 802.1X profile parameters and enters dot1x profile configuration sub mode.

# clear mab

To clear the MAC authentication bypass (MAB) session or statistics, use the **clear mab** command in the EXEC modeXR EXEC mode.

```
clear mab { session intf-type if-name [ client mac-address ] | statistics { interface intf-type if-name | location node } }
```

## Syntax Description

**session** Clears MAB session related to a specific interface.

**statistics** Clears MAB statistics

## Command Default

None

## Command Modes

EXEC modeXR EXEC mode

## Command History

Release	Modification
Release 7.3.4	This command was introduced.
Release 7.5.2	

## Usage Guidelines

No specific guidelines impact the use of this command.

## Task ID

Task ID	Operation
interface	read

The following example shows how to clear MAB statistics on an interface:

```
Router#clear mab statistics interface gigabitEthernet 0/0/0/0
```

## dot1x profile

To configure IEEE 802.1X profile parameters and to enter dot1x profile configuration sub mode, use the **dot1x profile** command in Global Configuration modeXR Config mode. To remove this configuration, use the **no** form of this command.

```
dot1x profile profile-name { authenticator | mab | pae { authenticator | both | supplicant } |
supplicant eap [ profile profile-name ] }
```

<b>Syntax Description</b>	<i>profile-name</i> Specifies the dot1x profile name, in WORD, with a maximum of 63 characters.						
	<b>authenticator</b> Enters the sub mode for authenticator.						
	<b>mab</b> Enables MAC authentication bypass (MAB) feature.						
	<b>paes</b> Sets 802.1X PAE type						
	<b>supplicant</b> Enters the sub mode for supplicant.						
	<b>eap</b> Configures EAP supplicant parameters.						
<b>Command Default</b>	None						
<b>Command Modes</b>	Global ConfigurationXR Config						
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.3.4 Release 7.5.2</td> <td>This command was modified to include the <b>mab</b> option as part of MAC authentication bypass (MAB) feature.</td> </tr> <tr> <td>Release 7.0.12</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.3.4 Release 7.5.2	This command was modified to include the <b>mab</b> option as part of MAC authentication bypass (MAB) feature.	Release 7.0.12	This command was introduced.
Release	Modification						
Release 7.3.4 Release 7.5.2	This command was modified to include the <b>mab</b> option as part of MAC authentication bypass (MAB) feature.						
Release 7.0.12	This command was introduced.						
<b>Usage Guidelines</b>	<p>Prior to the introduction of MAB feature, the dot1x configuration in these routers was only a key-provider for MACSec functionality, and not a mechanism for port control on the router.</p> <p>See the <i>MACSec Using EAP-TLS Authentication</i> chapter and the <i>Implementing Port Control</i> chapter in the <i>System Security Configuration Guide for Cisco ASR 9000 Series Routers</i> and the <i>System Security Configuration Guide for Cisco 8000 Series Routers</i> respectively, for details of 802.1X profile and MAB feature.</p>						
<b>Task ID</b>	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>config-services</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	config-services	read, write		
Task ID	Operations						
config-services	read, write						

### Examples

This example shows how to configure 802.1X profile on the router:

```
Router# configure
```

```

Router(config)# dot1x profile test_profile
Router(config-dot1x-test_profile)# pae both
Router(config-dot1x-test_profile)# authenticator timer reauth-time 3600
Router(config-dot1x-test_profile)# supplicant eap profile test-eap-profile
Router(config-dot1x-test_profile)# commit

```

This example shows how to enable MAB feature to implement port controlling:

```

Router#configure
Router(config)#dot1x profile test_mab
Router(dot1xx-test_mab)#mab
Router(dot1xx-test_mab)#commit

```

#### Related Commands

Command	Description
<a href="#">authenticator, on page 2</a>	Configures authenticator parameters and enters the authenticator configuration sub mode.

# show mab

To display the MAC authentication bypass (MAB) feature status of the client, use the **show mab** command in the EXEC modeXR EXEC mode.

```
show mab { detail [ location node ] | interface intf-type if-name [detail] | statistics { interface intf-type if-name | location node } | summary [ location node ] }
```

## Syntax Description

<b>detail</b>	Displays detailed MAB information.
<b>interface</b>	Displays MAB information of the interface.
<b>statistics</b>	Displays MAB statistics
<b>summary</b>	Displays summary of the MAB information.

## Command Default

None

## Command Modes

EXEC modeXR EXEC mode

## Command History

Release	Modification
Release 7.3.4	This command was introduced.
Release 7.5.2	

## Usage Guidelines

Based on the client authorization status, the **show mab** command output displays one of these values in the authorization status field:

- Authorizing
- Authorized
- Authorized (Server unreachable)
- Authorized (Server send fail)
- Unauthorized (Server Reject)
- Unauthorized (Server unreachable)
- Unauthorized (Server send fail)

## Task ID

Task ID	Operation
interface	read

The following examples show how to verify client MAB information at various levels:

```

Router#show mab summary
Fri Apr 1 16:37:32.340 IST
