## Preface

---

This command reference describes the Cisco IOS XR licensing commands.

From Release 6.1.2 onwards, Cisco introduces support for the 64-bit Linux-based IOS XR operating system. Extensive feature parity is maintained between the 32-bit and 64-bit environments. Unless explicitly marked otherwise, the contents of this document are applicable for both the environments. For more details on Cisco IOS XR 64 bit, refer to the [Release Notes](#) for Cisco IOS XR Series Routers.

# Smart Licensing Commands

---

This module describes the commands used to configure Smart Licensing.

For detailed information about Smart Licensing concepts, configuration tasks, and examples, see the *Implementing Smart Licensing on Cisco IOS XR Software* .

# crypto ca http-proxy

To enable communication with the certification authority to retrieve the Certificate Revocation List (CRL) use the **crypto ca http-proxy** command in the Global Configuration mode. Use the **no** form of this command to disable the proxy.

**crypto ca http-proxy** *server-IP-Address* **portnumber**  
**no****crypto ca http-proxy** *server-IP-Address* **portnumber**

Syntax Description	Parameter	Description
	<b>http-proxy</b> <i>server-IP-address</i>	Specifies the host IP address.
	<b>portnumber</b>	http-proxy server port number. The range is from 1-65535.

**Command Default** No default.

**Command Modes** Global configuration

Command History	Release	Modification
	Release 7.0.2	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	pkg-mgmt	Read, Write, Execute

## Example

This example shows how to run the command to enable communication with the certification authority to retrieve the Certificate Revocation List (CRL).

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# crypto ca http-proxy 10.10.10.1 port 1
```

# license smart deregister

To cancel device registration from Cisco Smart Software Manager (CSSM), use the **license smart deregister** command in the EXEC mode.

## license smart deregister

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC mode

Command History	Release	Modification
	Release 7.11.1	This command was introduced.
		This command is not applicable to smart licensing protocol (SLP).

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

**Note** This command is not applicable to smart licensing protocol (SLP).

Task ID	Task ID	Operation
	pkg-mgmt	Execute

## Example

The following example shows output for the **license smart deregister** command on Cisco IOS XR:

```
RP/0/RP1/CPU0:router#license smart deregister
```

# license smart enable

To enable Smart Licensing for your product, use the **license smart enable** command in the Administration Configuration mode. Use the **no** form of this command to disable Smart Licensing and return to the default traditional mode of licensing.

**license smart enable**  
**no license smart enable**

**Syntax Description** This command has no keywords or arguments.

**Command Default** By default, traditional licensing mode is on.

**Command Modes** Administration configuration

Command History	Release	Modification
	Release 5.2.0	This command was introduced on ASR 9000 routers.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Smart Licensing components are packaged into the asr9k mini image. By default, traditional licensing mode is on. Use the **license smart enable** command to switch to the Smart Licensing model.

Task ID	Task ID	Operation
	pkg-mgmt	Read, Write, Execute

## Example

This example shows how to run the command to enable Smart Licensing, and the configuration with Smart Licensing enabled.

```
RP/0/RSP0/CPU0:router(admin)# configure
RP/0/RSP0/CPU0:router(admin-config)#license smart enable
RP/0/RSP0/CPU0:router(admin-config)#show config
Building configuration...
!! IOS XR Configuration 5.2.0.19I
license smart enable
end
```

# license smart factory reset

To clear all licensing information from the trusted store and memory, except the evaluation period count down and the Specific License Reservation (SLR) sequence number, use the **license smart factory reset** command in EXEC mode.

## license smart factory reset

<b>Syntax Description</b>	<b>reset</b>	Clears all saved smart licensing information.
<b>Command Default</b>	None	
<b>Command Modes</b>	EXEC mode	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 24.1.1	This command was introduced.
<b>Usage Guidelines</b>	Restart the Smart License server after a factory reset to ensure the Smart Agent functions properly.	
<b>Task ID</b>	<b>Task ID</b>	<b>Operation</b>
	pkg-mgmt	execute

### Example

The following example shows output for the **license smart factory reset** command on Cisco IOS XR:

```
RP/0/RP1/CPU0:router#license smart factory reset
```

# license smart import

To import Smart Licensing authorization codes, policies, trust codes and other licensing elements, use the **license smart import** command in EXEC mode.

## license smart import word

<b>Syntax Description</b>	<b>word</b>	Specifies the complete path to a file, including the filename.
<b>Command Default</b>	None	
<b>Command Modes</b>	EXEC mode	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 24.1.1	This command was introduced.
<b>Task ID</b>	<b>Task ID</b>	<b>Operation</b>
	pkg-mgmt	execute

### Example

The following example shows output for the **license smart import** command on Cisco IOS XR:

```
RP/0/RP1/CPU0:router#license smart import word
```

```
Mon May 6 11:12:05.761 IST
Failed to read file content
Error : Null pointer Error
```

# license smart proxy

To configure the smart licensing proxy settings, use the **license smart proxy** command in XR Config mode.

```
license smart proxy { hostname <address/ hostname> | port <0-65535> }
```

<b>Syntax Description</b>	<b>hostname</b> <address/ hostname>	Enter the IP Address or hostname of the proxy server.
	<b>port</b> <0-65535>	Specifies the proxy port. Enter the proxy port number.

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** XR Config mode

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 24.1.1	This command was introduced.

**Usage Guidelines** Configures a proxy for the Smart transport mode. When a proxy is configured, licensing messages are sent to the proxy along with the final destination URL (CSSM). The proxy sends the message on to CSSM. Provide the address and port information.

<b>Task ID</b>	<b>Task ID</b>	<b>Operation</b>
	pkg-mgmt	read, write

## Example

The following example shows output for the **license smart proxy** command on Cisco IOS XR:

```
RP/0/RP1/CPU0:router (config)#license smart proxy hostname address
```

# license smart renew

To manually renew your device's ID or authorization with Cisco Smart Software Manager (CSSM), use the **license smart renew** command in the EXEC mode.

**license smart deregister** { **auth** | **id** }

<b>Syntax Description</b>	<b>auth</b>	Renews your authorization.
	<b>id</b>	Renews your ID.
<b>Command Default</b>	None	
<b>Command Modes</b>	EXEC mode	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 7.11.1	This command was introduced.
<b>Usage Guidelines</b>	Renew your token ID or authorization with Cisco smart licensing.	
<b>Task ID</b>	<b>Task ID</b>	<b>Operation</b>
	pkg-mgmt	Execute

## Example

The following example shows output for the **license smart renew** command on Cisco IOS XR:

```
RP/0/RP1/CPU0:router#license smart renew auth
```

# license smart reservation

To enable or disable the license reservation, use the **license smart reservation** command in Global configuration mode.

**license smart reservation**  
**no license smart reservation**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Global configuration mode

Command History	Release	Modification
	Release 24.1.1	This command was introduced.

**Usage Guidelines** First, enable Flexible Consumption Model (FCM) of licensing. To enable FCM for your hardware, use the **license smart flexible-consumption enable** command in the global configuration mode.

Then, enable Specific License Reservation feature of licensing. In order to enable SLR feature, license reservation must be configured in the global configuration mode:

Task ID	Task ID	Operation
	pkg-mgmt	read, write

## Example

The following example shows output for the **license smart reservation** command on Cisco IOS XR:

```
RP/0/RP1/CPU0:router(config)#license smart reservation
```

The following example shows output for the **no license smart reservation** command on Cisco IOS XR:

```
RP/0/RP1/CPU0:router(config)#no license smart reservation
```

# license smart register idtoken

To register a device with the token generated from Cisco Smart Software Manager (CSSM), use the **license smart register idtoken** command in EXEC mode.

```
license smart register idtoken token_ID { force }
```

Syntax Description		
	<i>token_ID</i>	Device with the token generated from CSSM.
	<b>force</b>	(Optional) Forcefully registers your device irrespective of whether the device is registered or not.

**Command Default** None

**Command Modes** EXEC mode

Command History	Release	Modification
	Release 7.11.1	This command was introduced.
		This command is not applicable to smart licensing protocol (SLP).

## Usage Guidelines

**Note** This command is not applicable to smart licensing protocol (SLP).

Use the existing token in place of token\_ID attribute.

If you do not have a token, then generate a new token from the CSSM portal.

For information on how to generate a new token, see Generate Product Registration Token from the Portal topic in the latest release of System Management Configuration Guide for respective platform in Cisco.com

Task ID	Task ID	Operation
	pkg-mgmt	execute

## Example

The following example shows output for the **license smart register idtoken** command on Cisco IOS XR:

```
RP/0/RP1/CPU0:router#license smart register idtoken <token_ID>
```

# license smart sync

To synchronize the Smart Licensing status, use the **license smart sync** command in the EXEC mode.

## license smart sync all

<b>Syntax Description</b>	<b>all</b>	Specifies codes for all devices in HA config.
<b>Syntax Description</b>	This command has no keywords or arguments.	
<b>Command Default</b>	None	
<b>Command Modes</b>	EXEC mode	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 24.1.1	This command was introduced.
<b>Usage Guidelines</b>	<p>To manually trigger the first RUM report, you can enter the <b>license smart sync</b> command in privileged EXEC mode. Normally, the product instance automatically sends this report at the scheduled time, according to the policy. Along with this first report, if applicable, it sends a request for a UDI-tied trust code.</p> <p>If the utility mode is enabled on the product instance, the RUM report that the product instance sends to CSLU is flagged accordingly.</p>	
<b>Task ID</b>	<b>Task ID</b>	<b>Operation</b>
	pkg-mgmt	execute

### Example

The following example shows output for the **license smart sync all** command on Cisco IOS XR:

```
RP/0/RP1/CPU0:router#license smart sync all
```

# license smart transport

To configure Smart Licensing communication message transport, use the **license smart transport** command in the XR Config mode.

**license smart transport** { **callhome** | **cslu** | **off** | **smart** }

Syntax Description	callhome	Use call home as transport.
	<b>cslu</b>	Use CSLU as transport.
	<b>off</b>	It disables the transport functionality.
	<b>smart</b>	Use smart transport.

**Syntax Description** This command has no keywords or arguments.

**Command Default** The cslu transport is default.

**Command Modes** XR Config mode

Command History	Release	Modification
	Release 24.1.1	This command was introduced.

Task ID	Task ID	Operation
	pkg-mgmt	read, write

## Example

The following example shows output for the **license smart transport callhome** command on Cisco IOS XR:

```
RP/0/RP1/CPU0:router(config)#license smart transport callhome
```

# license smart url

To configure the transport URL for Smart Licensing communication, use the **license smart url** command in XR Config mode.

```
license smart url { cslu | smart } <url>
```

Syntax Description	Parameter	Description
	<b>cslu</b>	Set the CSLU URL.
	<b>smart</b>	Set the smart transport URL.

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** XR Config mode

Command History	Release	Modification
	Release 24.1.1	This command was introduced.

Task ID	Task ID	Operation
	pkg-mgmt	read, write

## Example

The following example shows output for the **license smart url** command on Cisco IOS XR:

```
RP/0/RP1/CPU0:router(config)#license smart url smart
```

# license smart trust idtoken

To establish trust between a Cisco device and the Smart Software Manager (SSM) On-Prem, use the **license smart trust idtoken <ID Token>** command in EXEC mode.

**license smart trust idtoken <s0> all { force }**

<b>Syntax Description</b>	<s0>	Provide id token received from backend.
	<b>all</b>	Establish trust with backend for all CSLU.
	<b>force</b>	(Optional) Force backend to re-establish trust.

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC mode

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 24.1.1	This command was introduced.

<b>Task ID</b>	<b>Task ID</b>	<b>Operation</b>
	pkg-mgmt	execute

## Example

The following example shows output for the **license smart trust idtoken <ID Token>** command on Cisco IOS XR:

```
RP/0/RP1/CPU0:router#license smart trust idtoken <s0> all
```

# show license all

To display all entitlements in use the **show license all** command in the Administration mode, and on Cisco IOS XR 64-bit, it runs in EXEC mode.

**show license all**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Administration for Cisco IOS XR  
EXEC for Cisco IOS XR 64-bit

Command History	Release	Modification
	Release 5.2.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	pkg-mgmt	Read

## Example

This example displays the use of the **show license all** command.

```
RP/0/RSP0/CPU0:router(admin)#show license all
```

This example displays the use of the **show license all** command in the EXEC mode.

```
RP/0/RSP0/CPU0:router#show license all
Thu May 9 09:41:05.800 UTC
```

```
Smart Licensing Status
=====
```

```
Smart Licensing is ENABLED
```

```
License Conversion:
  Automatic Conversion Enabled: True
```

```
Export Authorization Key:
  Features Authorized:
    <none>
```

```
Utility:
```

Status: DISABLED

Smart Licensing Using Policy:

Status: ENABLED

Account Information:

Smart Account: <none>

Virtual Account: <none>

# show license certificate

To display details of the licensing certificate use the **show license certificate** command in the Administration mode.

## show license certificate

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Administration

Command History	Release	Modification
	Release 5.2.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	pkg-mgmt	Read

## Example

This example shows the output of the **show license certificate** command.

```
RP/0/RSP0/CPU0:router(admin)#show license cert
Licensing Certificates:
ID Cert Info:
Start Date: Mon Mar10 2014 05:58:28 UTC.
Expiry Date:Tue Mar10 2015 05:58:28 UTC
Serial Number: 34506
Version: 3
Subject/SN: 144a76ed-75de-4a8e-969e-30cf683c
Common Name: 5daab5111895b37e21e164dacc::1,2
ID Cert Info:
Start Date: Fri Jun14 2013 20:18:52 UTC.
Serial Number: 3
Expiry Date:Sun Apr24 2033 21:55:42 UTC
Version: 3
```

# show license entitlement

To display the details of the various entitlements you own use the **show license entitlement** command in the Administration mode.

## show license entitlement

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Administration

Command History	Release	Modification
	Release 5.2.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	pkg-mgmt	Read

## Example

This example shows the output of the **show license entitlement** command.

```
RP/0/RSP0/CPU0:router(admin)#show license entitlement
Entitlement:Tag: regid.2014-04.com.cisco.S-A9K-IVRF-LIC,1.0_0bb7,
Version: 1.0, Enforce Mode: Authorized
Requested Time : Mon May 19 2014 16:59:24 PST,
Requested Count: 1 Vendor String:
Tag: S-A9K-iVRF-LIC, Version: 1.0, Enforce Mode: Waiting
Requested Time : Mon Mar 10 2014 11:33:12 UTC,
Requested Count: 1 Vendor String:
Tag: regid.2014-04.com.cisco.S-A9K-IVRF-LIC,1.0_1bealf,
Version: 1.0, Not In Use
Requested Time : NA, Requested Count: NA
Vendor String:
Tag:S-A9K-9001-AIP-LIC,Version:1.0,Enforce Mode:Eval period
```

## show license features (chassis)

To display the licenses that are supported on a given chassis, use the **show license features** command in the Administration mode.

**show license features**

<b>Syntax Description</b>	This command has no keywords or arguments.
---------------------------	--

<b>Command Default</b>	None
------------------------	------

<b>Command Modes</b>	Administration
----------------------	----------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 5.2.0	This command was introduced.

<b>Usage Guidelines</b>	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

<b>Task ID</b>	<b>Task ID</b>	<b>Operation</b>
	pkg-mgmt	Read

### Example

This example shows the output for the **show license features** command.

```
RP/0/RSP0/CPU0:router(admin)#show license features
Platform Feature ID:
A9K-iVRF-LIC
A9K-9001-AIP-LIC
A9K-9001-OPT-LIC
A9K-9001-VID-LIC
A9K-NVSAT1-LIC
A9K-NVSAT5-LIC
A9K-NVSAT20-LIC
A9K-NVSAT1S-LIC
A9K-NVSAT5S-LIC
A9K-NVSAT20S-LIC
A9K-NV-CLUSTR-LIC
A9K-9001-MOB-LIC
```

# show license ha

To display the Smart Licensing high availability status, whether it is in active or standby mode, use the **show license ha** command in the Administration mode.

**show license ha**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Administration

Command History	Release	Modification
	Release 5.2.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	pkg-mgmt	Read

## Example

This example shows the output of the **show license ha** command.

```
RP/0/RSP0/CPU0:router(admin)#show license ha
HA Info:
RP Role: Active
Chassis Role: Active
HA Sudi:
Role: Active PID:ASR-9001,SN:FOC1741NC0Z
```

# show license pool

To display the pool to which the device belongs, use the **show license pool** command in the Administration mode.

## show license pool

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Administration

Command History	Release	Modification
	Release 5.2.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	pkg-mgmt	Read

## Example

This example shows the output of the **show license pool** command.

```
RP/0/RSP0/CPU0:router(admin)#show license pool
Assigned Pool Info: IMC0_POOL
```

## show license rum

To display information about Resource Utilization Measurement reports (RUM report) available on the product instance, including report IDs, the current processing state of a report, error information (if any), and to save the detailed or summarized view that is displayed, use the **show license rum** command in the EXEC mode.

**show license rum id all [detail]**

Syntax Description	id	Displays RUM report information based on the license name.
	<b>all</b>	Specify a particular license name to display all RUM reports for that license, or use the <b>all</b> keyword to display all RUM reports available on the product instance.
	<b>detail</b>	Displays detailed RUM report information.  You can use this to display detailed information by license name and detailed information by RUM report ID.

**Command Default** None

**Command Modes** EXEC mode

Command History	Release	Modification
	Release 24.1.1	This command was introduced.

**Usage Guidelines** A RUM report is a license usage report, which the product instance generates, to fulfil reporting requirements as specified by the policy. An acknowledgement (ACK) is a response from CSSM and provides information about the status of a RUM report. Once the ACK for a report is available on the product instance, it indicates that the corresponding RUM report is no longer required and can be deleted. You can use the **show license rum** command to:

Display information about the available RUM reports on the product instance - filtered by ID or license name.

Display a short summary of the information or display a detailed view of the information.

Track a RUM report throughout its lifecycle (from the time it is first generated until its acknowledgement from CSSM). By displaying the current processing state and condition of a report you can ascertain if and when there is a problem in the reporting workflow.

Save the displayed information. The CLI displays information about up to 200 reports. If there are more than 200 reports on the product instance and you want to view information about all of them, save the displayed info in a .txt file and export to the desired location to view.

To display a statistical view of RUM report information (the total number of reports on the product instance, the number of reports that have a corresponding ACK, the number of reports waiting for an ACK etc.) refer

to the Usage Report Summary: section of the show license all and show license tech privileged EXEC commands.

The show license tech command also provides RUM report related information that the Cisco technical support team can use to troubleshoot, if there are problems with RUM reporting.

Task ID	Task ID	Operation
	pkg-mgmt	Execute

### Example

The following example shows output for the **show license rum id all** command on Cisco IOS XR:

```
Router# show license rum id all
Tue Jun 18 00:27:40.389 UTC
Smart Licensing Usage Report:
=====
Report Id,           State,   Flag,  Feature Name
1718664968          ACK     N      8KSW_B_SIA
1718664969          ACK     N      8KSW_C_SIA
1718664970          ACK     N      8KSW_D_SIA
1718664971          ACK     N      8KE_PRM_100G_RTU

# show license register-status

To display the Smart Licensing registration status, use the **show license register-status** command in the Administration mode.

**show license register-status**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Administration

Command History	Release	Modification
	Release 5.2.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	pkg-mgmt	Read

## Example

This example shows the output for the **show license register-status** command.

```
RP/0/RSP0/CPU0:router(admin)#show license register-status
Registration Status: Completed
Step 3
for connectivity issues with the Cisco license
manager or register the device with a new token
ID.
Registration Start Time: Fri May 02 2014 17:19:53 PST
Next ID Cert Renew Time: Wed Oct 29 2014 17:21:55 PST
Next ID Cert Expiration Time: May02 2015 17:18:50 PST
Last Response Time: Fri May 02 2014 17:20:11 PST
Last Response Message: OK
```

## show license status (compliance)

To display the compliance status of Smart Licensing, use the **show license status** command in the Administration mode.

**show license status**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Administration

Command History	Release	Modification
	Release 5.2.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	pkg-mgmt	Read

### Example

This example shows you to use show license status command to display the current status of your license.

```
RP/0/RSP0/CPU0:router(admin)#show license status
Compliance Status: Eval period
```

# show license scheduler

To display the Smart Licensing scheduler information use the **show license scheduler** command in the Administration mode.

## show license scheduler

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Administration

Command History	Release	Modification
	Release 5.2.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	pkg-mgmt	Read

## Example

This example shows how to use the **show license scheduler** command, and its output.

```
RP/0/RSP0/CPU0:router(admin)#show license scheduler
Upcoming Scheduled Jobs:
  Job Name: Daily Job
    Recurring: Yes,      Cancelled: No
    Next Run Time : Sat May 31 2014 03:58:02 PST
  Job Name: Authorization Renewal Job
    Recurring: No,      Cancelled: Yes
    Next Run Time : NA
  Job Name: Init Flag Check Job
    Recurring: No,      Cancelled: Yes
    Next Run Time : NA
  Job Name: Evaluation Expiration Check Job
    Recurring: No,      Cancelled: No
    Next Run Time : Wed Aug 20 2014 11:18:42 PST
  Job Name: Register Period Expiration Check Job
    Recurring: No,      Cancelled: No
    Next Run Time : Fri May 30 2014 04:15:06 PST
```

## show license udi (smart)

To display the Smart Licensing UDI, use the **show license udi** command in the Administration mode, and on Cisco IOS XR 64-bit, it runs in EXEC mode.

**show license udi**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Administration for Cisco IOS XR  
EXEC for Cisco IOS XR 64-bit

Command History	Release	Modification
	Release 5.2.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	pkg-mgmt	Read

### Example

This example shows you how to use the **show license udi** command, and a sample output.

```
RP/0/RSP0/CPU0:router#admin
RP/0/RSP0/CPU0:router(admin)#show license udi
UDI:
PID:ASR-9001, SN:FOC1741NC0Z
```

# show license version

To display the Smart Licensing version information, use the **show license version** in the Administration mode.

**show license version**

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** Administration

Command History	Release	Modification
	Release 5.2.0	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	pkg-mgmt	Read

## Example

This example displays how to use the **show license version** command, and the output.

```
RP/0/RSP0/CPU0:router(admin)#show license version
Cisco Smart Licensing Agent, Version 1.1.0_dev/240
```

# show license platform detail

To display smart license detail, use the **show license platform detail** command in the EXEC mode.

## show license platform detail

**Syntax Description** This command has no keywords or arguments.

**Command Default** None

**Command Modes** EXEC mode

Command History	Release	Modification
	Release 7.11.1	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	pkg-mgmt	Read

## Example

The following example shows output for the **show license platform detail** command on Cisco IOS XR:

```
RP/0/RP1/CPU0:router#show license platform detail

# show license platform trace

To display trace logs for platform-specific licensing operations, use the **show license platform trace** command in EXEC mode.

**show license platform trace** { **all** | **detail** | **error** | **info** }

Syntax Description		
<b>all</b>		Displays all trace logs.
<b>detail</b>		Displays detail trace logs.
<b>error</b>		Displays error messages in the trace logs.
<b>info</b>		Displays detailed informational messages in the trace logs.

**Command Default** None

**Command Modes** EXEC mode

Command History	Release	Modification
	Release 7.11.1	This command was introduced.

**Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	pkg-mgmt	Read

## Example

The following example shows output for the **show license platform trace** command with the **all** keyword:
