## **Pseudo Random Binary Sequence**

Pseudo Random Binary Sequence (PRBS) feature allows users to perform data integrity checks on their encapsulated packet data payloads using a pseudo-random bit stream pattern. PRBS generates a bit pattern and sends it to the peer router that uses this feature to detect if the sent bit pattern is intact or not.

The Pseudo Random Binary Sequence (PRBS) feature allows you to perform data integrity checks between the NCS1014 trunk links and client links without enabling the actual client traffic.

### PRBS supports:

- Trunk PRBS(coherentDSPCtrl)
- Client PRBS(HundredGigECtrlr and FourHundredGigECtrlr)

You need to enable PRBS feature on both the transmitting and receiving NCS 1014 trunk ports. The transmitting trunk port generates a bit pattern and sends it to the peer NCS 1014 device. The device detects if the sent bit pattern is received.

You can configure PRBS on the NCS 1014 trunk port and client port for the NCS1K4-2.4T-K9 card.

- **Source mode** The NCS 1014 at trunk port generates PRBS signal on the line continuously as per the configured PRBS pattern.
- Sink mode The NCS 1014 at trunk port gets locked to the ingress signal according to the configured pattern, analyzes and reports the errors.
- Source-Sink mode The NCS 1014 at trunk port acts as both the PRBS transmitter and receiver, that is, it generates PRBS signal as per the configured pattern, and also gets locked to the ingress signal with the same pattern, and reports the errors.

#### **Trunk PRBS**

NCS 1014 trunk port supports the following PRBS patterns:

- PRBS31 Sequence length is from 2^31 -1 bits
- PRBS23 Sequence length is from 2^23 -1 bits
- PRBS15 Sequence length is from 2<sup>15</sup> -1 bits
- **PRBS7** Sequence length is from 2<sup>7</sup> -1 bits.

Note

NCS1K4-2.4T-K9 Interoperability for ethernet PRBS PN23 pattern is not supported.

## Configuring Trunk PRBS on NCS1K4-2.4T-K9

Use the following sample configuration to configure PRBS trunk mode on the NCS1K4-2.4T-K9:

```
RP/0/RP0/CPU0:ios(config) #controller CoherentDSP0/0/0/7
RP/0/RP0/CPU0:ios(config-CoDSP) #secondary-admin-state maintenance
RP/0/RP0/CPU0:ios(config-CoDSP) #prbs mode source-sink pattern pn15
RP/0/RP0/CPU0:ios(config-CoDSP) #commit
Wed Nov 15 18:11:55.450 UTC
```

Use the following sample configuration to display trunk controllers details:

Use the following sample configuration to display cumulative count of PRBS bit errors in the 15-min sampling interval:

```
RP/0/RP0/CPU0:ios#show controllers coherentDSP 0/0/0/7 pm current 15-min prbs
Wed Nov 15 18:19:10.308 UTC
PRBS in the current interval [18:15:00 - 18:19:10 Wed Nov 15 2023]
 PRBS current bucket type : Valid
            : 0
                         Threshold : 0
                                             TCA(enable) : NO
 FOUND-COUNT : 0
                        Threshold : 0
                                             TCA(enable) : NO
LOST-COUNT : 0
                         Threshold : 0
                                              TCA(enable) : NO
FOUND-AT-TS : NULL
LOST-AT-TS : NULL
CONFIG-PTRN : PRBS PATTERN PN15
STATUS : LOCKED
Last clearing of "show controllers OTU" counters never
```

#### **Client PRBS**

NCS 1014 client port supports the following PRBS patterns:

- PRBS31 Sequence length is from 2<sup>3</sup>1 -1 bits
- **PRBS23** Sequence length is from 2<sup>23</sup> -1 bits

## Configuring Client PRBS on NCS1K4-2.4T-K9

Use the following sample configuration to configure PRBS client mode on the NCS1K4-2.4T-K9:

```
RP/0/RP0/CPU0:ios(config)#controller fourHundredGigECtrlr 0/0/0/4
RP/0/RP0/CPU0:ios(config-eth-ctrlr) #prbs mode source-sink pattern pn23
RP/0/RP0/CPU0:ios(config-eth-ctrlr) #sec-admin-state maintenance
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#commit
```

Use the following sample configuration to display four hundred gigabit client controllers details:

```
RP/0/RP0/CPU0:ios#show controllers fourHundredGigEctrlr 0/0/0/4
Wed Nov 15 18:39:29.478 UTC
