Document Organization

This document is organized into the following chapters:

Chapter	Description
Node Reference	Explains the DWDM node types available for the Cisco NCS 2000 Series shelf assemblies. The DWDM node type is determined by the type of amplifier and filter cards that are installed. Also explains the DWDM automatic power control (APC), reconfigurable optical add/drop multiplexing (ROADM) power equalization, span loss verification, and automatic node setup (ANS) functions.
Turning Up a Node	Explains how to provision a single Cisco NCS node and turn it up for service.
Performing Node Acceptance Tests	Provides test procedures to verify that installed cards are operating correctly in a Cisco NCS node.
Network Reference	Explains the DWDM network applications and topologies. Also provides network-level optical performance references.
Turning Up a Network	Explains how to turn up and test a Cisco NCS network.
Creating Optical Channel Circuits and Provisionable Patchcords	Explains how to create Cisco NCS optical channel client connections (OCHCCs), optical channel network connections (OCHNCs), and optical trail circuits.
Monitoring Performance	Explains how to enable and view performance monitoring (PM) statistics for the Cisco NCS.
Managing the Node	Explains how to modify node provisioning for the Cisco NCS and perform common management tasks such as monitoring the DWDM automatic power control (APC) and span loss values.
Changing DWDM Card Settings	Explains how to change line, performance monitoring (PM), and threshold settings on Cisco NCS cards.
Alarm and TCA Monitoring and Management	Contains the procedures for viewing and managing the alarms and conditions on a Cisco NCS.
Managing Network Connectivity	Provides an overview of Cisco NCS data communications network (DCN) connectivity. The chapter shows common Cisco NCS IP network configurations and includes detailed data communications network (DCN) case studies.
