

Configuration Examples

This chapter provides examples of configuring common networking tasks on the router. The examples in this chapter are provided for illustrative purposes only; little or no context is given with these examples. For more information, see [Installing the Software](#).

When reading this section, also be aware that networking configurations are complex and can be configured in many ways. The examples in this section show one method of accomplishing a configuration.

This chapter contains the following examples:

- [Copying the Consolidated Package from the TFTP Server to the Router, on page 1](#)
- [Configuring the Router to Boot Using the Consolidated Package Stored on the Router, on page 2](#)
- [Extracting the Subpackages from a Consolidated Package into the Same File System, on page 4](#)
- [Extracting the Subpackages from a Consolidated Package into a Different File System, on page 6](#)
- [Configuring the Router to Boot Using Subpackages, on page 7](#)
- [Backing Up Configuration Files, on page 13](#)
- [Displaying Digitally Signed Cisco Software Signature Information, on page 14](#)
- [Obtaining the Description of a Module or Consolidated Package, on page 18](#)

Copying the Consolidated Package from the TFTP Server to the Router

The following example shows how to copy the consolidated package from the TFTP server to the router:

```
Router# dir bootflash:
Directory of bootflash:/

   11  drwx       16384   Jul 2 2012 15:25:23 +00:00  lost+found

Extracting the Subpackages from a Consolidated Package into the Same File System

The following example shows how to extract the subpackages from a consolidated package into the same file system.

After entering the **request platform software package expand file bootflash:isr4400.bin** command (note that the **to** option is not used) the subpackages are extracted from the consolidated package into **bootflash:**

```

Router> enable
Router# dir bootflash:
Directory of bootflash:/

Extracting the Subpackages from a Consolidated Package into a Different File System

The following example shows how to extract the subpackages from a consolidated package into a different file system.

The initial **dir usb0:** command shows that there are no subpackages in the **bootflash:** directory.

After the **request platform software package expand file usb0:isr4400.bin to bootflash:** command is entered, the subpackages are displayed in the **bootflash:** directory. The isr4400.bin consolidated package file is in the **usb0:** directory.

```
Router# dir usb0:

Configuring the Router to Boot Using Subpackages

After placing the provisioning file and subpackage files in a directory and booting the router, we recommend that you do not rename, delete, or alter any of these files. Renaming, deleting, or altering the files can lead to unpredictable router problems and behaviors. Each version of a consolidated package contains subpackages that are similar to those shown in the following table. However, each version of a consolidated package may contain different versions of each subpackage.

Table 1: Subpackages

Subpackage	Description
RPBBase	Provides the operating system software for the Route Processor. This is the only bootable package.
RPCControl	Controls the control plane processes that act as the interface between the Cisco IOS process and the rest of the platform.
RPAccess	Exports processing of restricted components, such as Secure Socket Layer (SSL), Secure Shell (SSH), and other security features.
RPIOS	Provides the Cisco IOS kernel, where Cisco IOS XE features are stored and run. Each consolidated package has a different version of RPIOS.
ESPBBase	Provides the Embedded Services Processor (ESP) operating system and control processes, and ESP software.
SIPBase	Provides control processes.
SIPSPA	Provides Input/Output (I/O) drivers.
Firmware	Firmware subpackage. The name of the subpackage includes the module type, which either refers to a Network Information Module (NIM) or Cisco Enhanced Service Module.

The following example shows how to configure the router to boot using subpackages:

The **dir bootflash:** command confirms that all subpackages and the provisioning file are in the same file system, as shown in the following example:

```
Router# dir bootflash:
Directory of bootflash:/

Obtaining the Description of a Module or Consolidated Package

In this example, internal details of the consolidated package are displayed on the screen:

```
router# request platform software package describe file
bootflash:isr4400-rpbase.BLD_MCP_DEV_LATEST_20130114_162711.SSA.pkg
Package: isr4400-rpbase.BLD_MCP_DEV_LATEST_20130114_162711.SSA.pkg
Size: 79755832
Timestamp: 2013-01-15 15:46:59 UTC
Canonical path: /bootflash/isr4400-rpbase.BLD_MCP_DEV_LATEST_20130114_162711.SSA.pkg

Raw disk-file SHA1sum:
    5cd5916a216b147e3d9e33c0dc5afb18d86bda94

Digital Signature Verified
Computed SHA1sum:
    de80d5920819d224113b81a1d64b17449859952e
Contained SHA1sum:
    de80d5920819d224113b81a1d64b17449859952e
Hashes match. Package is valid.

Header size:      760 bytes
Package type:     30001
Package flags:    0
Header version:   1

Internal package information:
Name: rp_base
BuildTime: 2013-01-14_14.55
ReleaseDate: Mon-14-Jan-13-16:27
BootArchitecture: i686
RouteProcessor: overlord
Platform: ISR
User: mcpre
PackageName: rpbase
Build: BLD_MCP_DEV_LATEST_20130114_162711
CardTypes:

Package is bootable on RP when specified
by packages provisioning file.
```
