Supported Cellular PIMs in Routers

Note Always check the IOS-XE release notes to understand the minimum software release supporting a given PIM on a given platform.

Important The Pluggable Module is not hot swappable. The router must be reloaded after a new module is installed.

This section describes which cellular pluggable modules are supported in each router.

Supported Modem Technology

This section describes the details of each modem used in the cellular pluggable modules.

The cellular PIMs use Sierra Wireless series modems, and Telit modems. The software download page can be found here:

Cisco pluggable modules do not support mmW (FR2) bands at this time.

Cellular Pluggable Module Firmware

The following command is the most common one used for updating the modem firmware.

```
Router#microcode reload cellular <subinterface> <slot> modem-provision flash:<modem firmware version>
```

Note This command may not be appropriate for your particular modem. Consult the [Cisco Firmware Upgrade Guide for 4G LTE and 5G Cellular Modems](#) before updating.

The following table lists the modem and firmware for the pluggable modules.

Cellular Pluggable Module Dimensions

The physical dimensions of the PIM are shown in the following graphic. All values are in inches.

Cellular PIM LEDs

Cellular PIM LED status can be obtained through the `show led` CLI, or visually on the pluggable modem card. The following is an example of the `show led` CLI from an IR1800:
