Licensing on the Cisco IR807 Industrial Integrated Services Router

Licensing

This document provides details on the security licensing for the Cisco IR807 Industrial Integrated Services Router.

The IOS feature set is aligned with the IOT 15.x M/T release strategy. They are:

- IR800IUK9-15703M Cisco IR800L Series UNIVERSAL
- IR800INPEK9-15703M Cisco IR800L Series UNIVERSAL NO PAYLOAD ENCRYPTION

Software License PIDs

The Software License PIDs are shown in the following table:

Table 1: Software License PIDs

Software PID	Name	Description
SL-810-AIS	Cisco 800 Series Industrial Routers IP Base License	Routing (BGP, OSPF, RIP, EIGRP, ISIS,), PBR, IGMP/MLD, Multicast, QoS, AAA, Raw Sockets, Manageability
SL-810-ADVSEC	Cisco 800 Series Industrial Routers Security License	SSL, VPN, IPSec, DMVPN, FlexVPN, IOS Firewall

Install Licenses

To enable the RightToUse license, perform the following steps:

Before you begin

Licenses are installed at manufacturing. If the advsecurity technology-package is not installed, the crypto related functions will not work. See additional information under Hardware Crypto Support.

Step 1 Check the current version of the license.

Step 2	Install the license.							
	Router# license	install flash:	FCW2132001S	_2017100308081	72450.lic			
Step 3	Accept the EULA.							
	Router# license	accept end use	er agreement					
Step 4	Enable the technology-packages.							
	Router# license boot module ir800l level advsecurity Router# license boot module ir800l level advipservices							
Step 5	Reload the IR800 router.							
	Router# reload							
Step 6	Verify the licensing status on the router.							
	Router# show license feature							
	Feature name	Enforcement	Evaluation	Subscription	Enabled	RightToUse		
	advipservices	no	yes	no	yes	yes		
	advsecurity	no	no	no	no	no		
	ios-ips-update	yes	yes	yes	no	yes		

Hardware Crypto Support

A security license must be installed to enable hardware based crypto support.

To check which version of cryptographic support is being used on a device, use the following commands:

Use the **show crypto engine configuration** command to find details about the cryptographic engines being used. This command helps to understand the current crypto support status, including acceleration type and configuration.

```
Router# show crypto engine configuration
```

```
crypto engine name: Virtual Private Network (VPN) Module
   crypto engine type: hardware
                State: Enabled
             Location: onboard 0
         Product Name: Onboard-VPN
HW Version: 1.0
          Compression: No
                 DES: Yes
                3 DES: Yes
              AES CBC: Yes (128,192,256)
                        No
             AES CNTR:
Maximum buffer length: 4096
    Maximum DH index: 0000
     Maximum SA index: 0000
  Maximum Flow index: 0256
Maximum RSA key size: 0000
crypto lib version: 22.0.0
crypto engine in slot: 0
            platform: VPN hardware accelerator
   crypto lib version: 22.0.0
```

Use the **show crypto engine brief** command to get a high-level summary of the cryptographic engines on a router. This is useful for quickly determining the status and type of cryptographic acceleration (software or hardware) that is being used.

Router# show crypto engine brief

```
crypto engine name: Virtual Private Network (VPN) Module
   crypto engine type: hardware
State: Enabled
               Location: onboard 0
          Product Name: Onboard-VPN
             FW Version: 1
          Time running: 1335 seconds
Compression: Yes
                     DES: Yes
                   3 DES: Yes
                AES CBC: Yes (128,192,256)
               AES CNTR: No
Maximum buffer length: 4096
Maximum DH index: 0500
     Maximum SA index: 0500
   Maximum Flow index: 1000
 Maximum RSA key size: 0000
   crypto engine name: Cisco VPN Software Implementation
crypto engine type: software
serial number: FF98383A
  crypto engine state: installed
  crypto engine in slot: N/A
```

Use the **show crypto engine config** command to view the configuration settings related to cryptographic features and modules.

Router# show crypto engine config

```
crypto engine name: Virtual Private Network (VPN) Module
   crypto engine type: hardware
State: Enabled
             Location: onboard 0
         Product Name: Onboard-VPN
            FW Version: 1
         Time running: 1358 seconds
Compression: Yes
          Compression:
                  DES: Yes
                 3 DES: Yes
               AES CBC: Yes (128,192,256)
             AES CNTR: No
Maximum buffer length: 4096
Maximum DH index: 0500
     Maximum SA index: 0500
   Maximum Flow index: 1000
 Maximum RSA key size: 0000
   crypto lib version: 22 421.0.0
crypto engine in slot: 0
              platform: VPN hardware accelerator
   crypto lib version: 22 421.0.0
```

Use the **show crypto engine accelerator stat** command to view the status and statistics of the cryptographic accelerators.

```
Router# show crypto engine accelerator stat
Device: Onboard VPN
Location: Onboard: O
:Statistics for encryption device since the last clear
of counters 1404 seconds ago
```

```
0 packets in
      0 bytes in
      0 paks/sec in
      0 Kbits/sec in
      0 packets decrypted
      0 bytes before decrypt
      0 bytes decrypted
      0 packets decompressed
      0 bytes before decomp
      0 bytes after decomp
      0 packets bypass decompr
     0 bytes bypass decompres
0 packets not decompress
0 bytes pot
      0 bytes not decompressed
  1.0:1 compression ratio
Last 5 minutes:
     0 packets in
      0 paks/sec in
      0 bits/sec in
      0 bytes decrypted
 0 Kbits/sec decrypted 0 Kbits/se
1.0:1 compression ratio 1.0:1 overall
```
