

Installation

- [Procedure with the Cisco Cyber Vision sensor management extension, on page 1](#)
- [Procedure with the Local Manager, on page 11](#)
- [Procedure with the CLI, on page 29](#)

Procedure with the Cisco Cyber Vision sensor management extension

After the [Initial configuration](#), proceed to the steps described in this section.

Note To be able to use the Cisco Cyber Vision sensor management extension, an IP address reachable by the Center Collection interface must be set on the Collection VLAN.

Note Since the extension deployment based on HTTPS, we should allow the flow to proceed as follows:

- For IEXxxx/CAT9k /IRxx : port TCP 443
- For IC3k : port TCP 8443

We can use an Access Control List (ACL) on IOS XE devices to limit access from the Cyber Vision.

Configuration example for IOS XE devices: [Filter Traffic Destined to Cisco IOS XE Devices WebUI Using an Access List - Cisco](#)

```
ip http access-class SOME_ID
```

```
ip http secure-server
```

```
!
```

```
access-list SOME_ID permit CENTER_ETH0_IP CENTER_ETH0_WILDCARDMASK
```

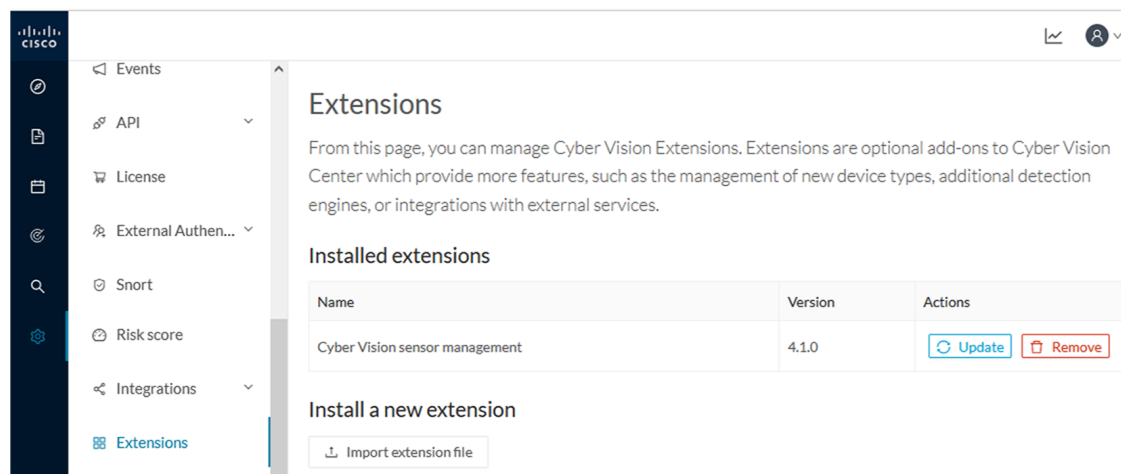

Where CENTER_ETH0_IP is the administration IP address of your Cyber Vision center (eth0).

Install the sensor management extension

To install the sensor management extension, you must:

Procedure

- Step 1** Retrieve the extension file (i.e. CiscoCyberVision-sensor-management-<version>.ext) from cisco.com.
- Step 2** Access the Extension administration page in Cisco Cyber Vision.
- Step 3** Import the extension file.

Once the sensor management extension is installed, you will find a new management job under the sensor administration menu ([Management jobs, on page 2](#)), and the **Install via extension** button will be enabled in the Sensor Explorer page.

Management jobs

As some deployment tasks on sensors can take several minutes, this page shows the jobs execution status and advancement for each sensor deployed with the sensor management extension.

This page is only visible when the sensor management extension is installed in Cisco Cyber Vision.

The screenshot shows the 'Management jobs' page in the Cisco management console. The page title is 'Management jobs' and the subtitle is 'Jobs execution for sensor management tasks.' The interface includes a left-hand navigation menu with categories like System, Data Management, Network Organization, Sensors, Users, Events, API, License, LDAP Settings, Snort, and Risk score. The 'Sensors' category is expanded, showing sub-items like Sensors, Capture, Management jobs (highlighted), and PCAP Upload. The main content area displays a table of job execution results.

Jobs	Steps	Duration
Single redeployment (FCW2435P3KW)	✓ — ✓ — ✓ — ✓	1m 11s
Single redeployment (FCW23500HDC)	✓ — ✓ — ✗ —	41s
Single redeployment (FOC2337LOCW)	✓ — ✓ — ✓ — ✓	1m 33s
Single redeployment (FCW23500HDC)	✓ — ✓ — ✗ —	35s
Single redeployment (FCW23500HDC)	✓ — ✓ — ✗ —	39s
Single redeployment (FCW23500HDC)	✓ — ✓ — ✗ —	43s
Single redeployment (FOC2334V045)	✓ — ✓ — ✓ — ✓	6m 52s

You will find the following jobs:

- Single deployment

This job is launched when clicking the Deploy Cisco device button in the sensor administration page, that is when a new IOx sensor is deployed.

- Single redeployment

This job is launched when clicking the Reconfigure Redeploy button in the sensor administration page, that is when deploying on a sensor that has already been deployed. This option is used for example to change the sensor's parameters like enabling active discovery.

- Single removal

This job is launched when clicking the Remove button from the sensor administration page.

- Update all devices

This job is launched when clicking the Update Cisco devices button from the sensor administration page. A unique job is created for all managed sensors that are being updated.

If a job fails, you can click on the error icon to view detailed logs.

```

Create a sensor in the sensor management extension

Procedure

Step 1 In Cisco Cyber Vision, navigate to Admin > Sensors > Sensor Explorer and click **Install sensor**, then **Install via extension**.

Step 2 Fill the requested fields so Cisco Cyber Vision can reach the device:

- IP address: admin address of the device.
- Port: management port (443).
- Login: user with the admin rights of the device.

- Password: password of the admin user.
- Capture Mode: Optionally, select a capture mode.

Install via extension

Reach Cisco device

Please fill the fields below to enable Cisco Cyber Vision to reach your device.

IP address*	Port*
<input type="text" value="192.168.49.20"/>	<input type="text" value="443"/>

For example 443 or 8443

Center collection IP

leave blank to use current collection IP

Credentials

Login*

Password*

Capture mode

Optimal (default): analyze the most relevant flows

All: analyze all the flows

Industrial only: analyze industrial flows

Custom: you set your filter using a packet filter in tcpdump-compatible syntax

[Exit](#)

[Connect](#)

Step 3 Click **Connect**.

The Center will join the device and the second parameter list will be displayed. For this step to succeed, the device needs to be reachable by the Center on its eth1 connection.

Configure a sensor in the sensor management extension

If the Center can join the switch, the following form appears:

Form for the Cisco IE3x00 and the Cisco IE9x00:

Install via extension

Configure Cyber Vision IOx sensor app

The device requires additional parameters. Some parameters have been pre-filled. Please complete the remaining fields.

Cisco device: IE-3400-8T2S

Capture IP address*

169.254.1.2

Capture prefix length*

30

Like 24, 16 or 8

Capture VLAN number*

2508

Collection IP address*

192.168.49.21

Collection prefix length*

24

Like 24, 16 or 8

Collection gateway

Collection VLAN number*

507

[Exit](#)[Next](#)**Form for the Cisco Catalyst 9x00 with RSPAN configuration available:**

Cisco device: C9300L-48T-4X

Monitor session type:

- ERSPAN: recommended choice
 RSPAN: use it only when using ERSPAN is not possible

Capture IP address*

169.254.1.2

Capture prefix length*

30

Like 24, 16 or 8

Capture VLAN number*

2508

Collection IP address*

192.168.0.248

Collection prefix length*

24

Like 24, 16 or 8

Collection gateway

Collection VLAN number*

4

[Exit](#)[Next](#)

While some parameters are filled automatically, you can still change them if necessary.

Procedure

Step 1

Fill the following parameters for the Collection interface:

- Capture IP address: IP address destination of the monitor session in the sensor
- Capture prefix length: mask of the capture IP address
- Capture VLAN number: VLAN of the monitor session in the sensor
- Collection IP address: IP address of the sensor in the device
- Collection prefix length: mask of the Collection IP address
- Collection gateway: gateway of the Collection IP address
- Collection VLAN number: VLAN of the sensor

Step 2

Click **Next**.

Step 3

Active Discovery:

If you want to enable Active Discovery on the sensor, select **Passive and Active Discovery**.

You can:

- use the sensor Collection interface by selecting it:

Install via extension

Configure Active Discovery

Please select an application type. If you want to enable Active Discovery on the application, select "Passive and Active Discovery". You will have to add some network interfaces parameters.

Passive only
 Passive and Active Discovery

Add Active Discovery configuration	Network interfaces
<input checked="" type="checkbox"/> Use collection interface + New network interface	<ul style="list-style-type: none"> • 192.168.49.21/24 VLAN#1 (collection interface)

- add new network interfaces filling the following parameters to set dedicated network interfaces and clicking Add:
 - IP address
 - Prefix length
 - VLAN number

Add Active Discovery configuration

Use collection interface

+ New network interface

IP address*

IP address interface used to do Active Discovery

VLAN number*

Use 1 by default

Add

Cancel

Network interfaces

- 192.168.50.21/24 VLAN#50

delete

Back

Deploy

Step 4 Click **Deploy**.

The Center starts deploying the sensor application on the target equipment. This can take a few minutes. You can go to the Management jobs page to check the deployment advancements.

Management jobs

Jobs execution for sensor management tasks.

Jobs	Steps
Single deployment (FCW2445P6X5)	<div style="display: flex; align-items: center; gap: 10px;"> <div style="width: 20px; height: 20px; background-color: #0070c0; border-radius: 50%;"></div> <div style="width: 20px; height: 20px; background-color: #ccc; border-radius: 50%;"></div> <div style="width: 20px; height: 20px; background-color: #ccc; border-radius: 50%;"></div> </div>

Once the deployment is finished, a new sensor appears in the sensors list.

The sensor's status will eventually turn to connected.

<input type="checkbox"/>	FCW2445P6X5	192.168.49.21	4.1.0+202202151440	Connected	Pending data	Enabled	4 days
--------------------------	-------------	---------------	--------------------	-----------	--------------	---------	--------

If the Active Discovery has been enabled and set -that is if the option **Passive and Active Discovery** was selected when configuring the sensor in the sensor management extension- the sensor is displayed as below with Active Discovery's status as Enabled.

<input type="checkbox"/>	Label	IP Address	Version	Location	Health status	Processing status	Active Discovery	Uptime
<input type="checkbox"/>	FCW2445P6X5			USA	Disconnected	Disconnected		Not
<input type="checkbox"/>	FCW2445P6X5			USA				Not
<input type="checkbox"/>	FCW2445P6X5	192.168.49.21	4.1.0+202202151440		Connected	Pending data	Enabled	4 days

Configure Active Discovery

Once the sensor is connected, you can change the Active Discovery's network interface so it uses the Collection network interface instead, and add several network interfaces for the sensor to perform Active Discovery on several subnetworks at the same time.

Procedure

Step 1 Click the sensor to configure and click the **Active Discovery** button on its right side panel.

The screenshot shows the 'Sensor Explorer' interface for sensor FCW2445P6X5. The main panel displays a table of folders and sensors, with the selected sensor FCW2445P6X5 highlighted. The right-hand configuration panel shows the following details:

- Label: FCW2445P6X5
- Serial Number: FCW2445P6X5
- IP address: 192.168.49.21
- Version: 4.1.0+202202151440
- System date: Feb 24, 2022 4:13:06 PM
- Deployment: Sensor Management Extension
- Active Discovery: Enabled
- Capture mode: All
- System Health Status: Connected
- Processing status: Normally processing
- Uptime: a day

At the bottom of the configuration panel, several buttons are visible: 'Move to', 'Capture mode', 'Redeploy', 'Uninstall', and 'Active Discovery'. The 'Active Discovery' button is highlighted with a red box.

The Active Discovery configuration appears with the interface currently set.

Step 2 Select **Use collection interface** for the Active Discovery to use the Collection network interface.

ACTIVE DISCOVERY CONFIGURATION

From here you can configure Active Discovery

Add Active Discovery configuration

- Use collection interface
- + New network interface

Network interfaces

- 192.168.49.21/24 VLAN#1 (collection interface)

Configure Cancel

To add a network interface to Active Discovery for the sensor to perform active monitoring on another subnetwork:

Step 3 Add a new network interface by clicking the corresponding button.

Step 4 Fill the following parameters to set dedicated network interfaces:

- IP address
- Prefix length
- VLAN number

Step 5 Click **Add**.

ACTIVE DISCOVERY CONFIGURATION

From here you can configure Active Discovery

+ New network interface

IP address*

192.168.52.24

Prefix length*

24

VLAN number*

52

Add Cancel

Configure Cancel

You can add as many network interfaces as needed.

Step 6 When you are done, click **Configure**.

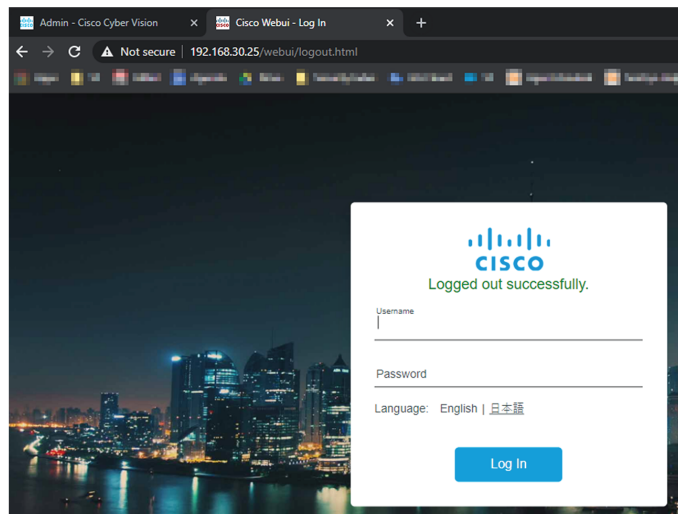

A message saying that the configuration has been applied successfully appears.

Procedure with the Local Manager

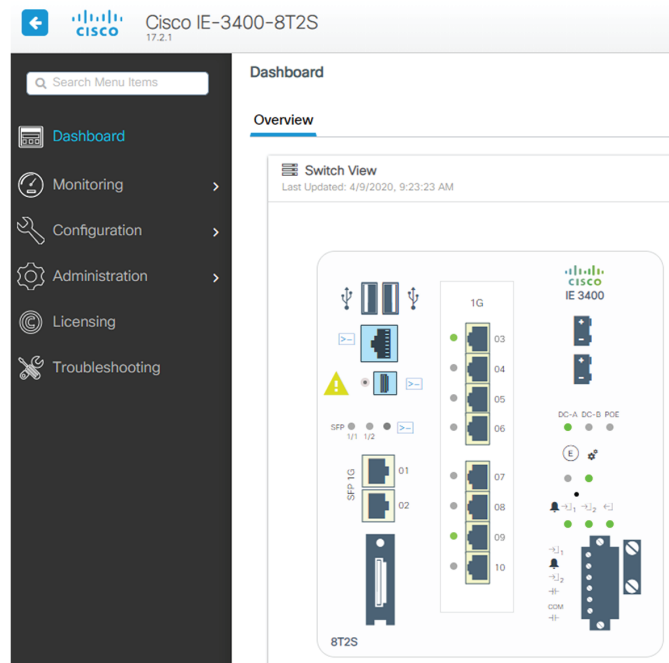

After the [Initial configuration](#), proceed to the steps described in this section.

Access the Local manager

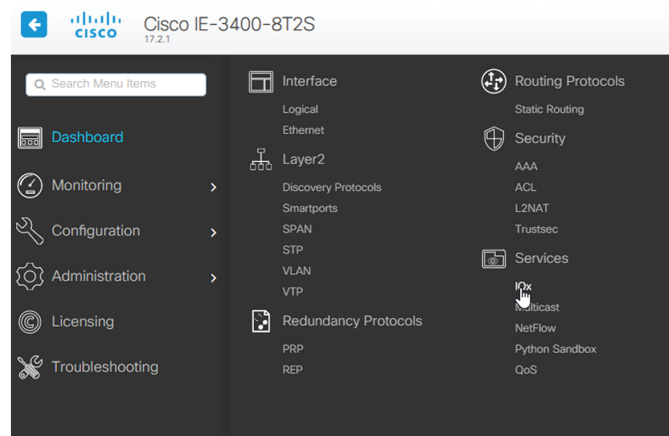

1. Open a browser and navigate to the IP address you configured on the interface you are connected to.
2. Log in using the Local Manager user account and password.

For example: Cisco IE3300 10G/IE3400

- Once logged into the Local Manager, navigate to Configuration > Services > IOx.
For example: Cisco IE3300 10G/IE3400

- Log in using the user account and password.

Install the sensor virtual application

Once logged in, the following menu appears:

1. Click **Add New**.
2. Add an Application id name (e.g. CCVSensor).
3. Select the application archive file
 - "CiscoCyberVision-IOx-aarch64-xxx.tar" for the Cisco IE3300/IE3400/IE9300
 - "CiscoCyberVision-IOx-Active-Discovery-aarch64.tar" for the Cisco IE3300/IE3400/IE9300 with Active Discovery
 - "CiscoCyberVision-IOx-x86-64-xxx.tar" for the Cisco Catalyst 9300
 - "CiscoCyberVision-IOx-Active-Discovery-x86-64.tar" for the Cisco Catalyst 9300

The installation takes a few minutes.

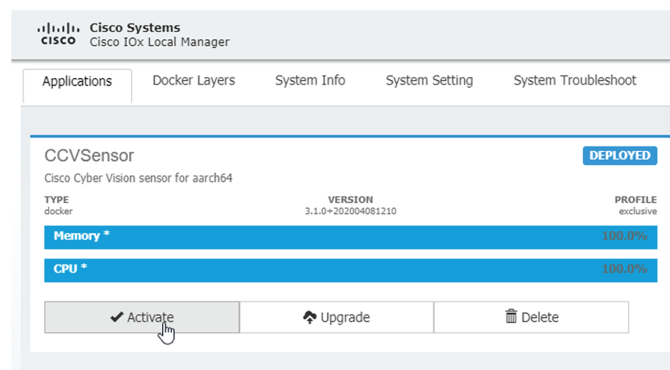

When the application is installed, the following message is displayed:

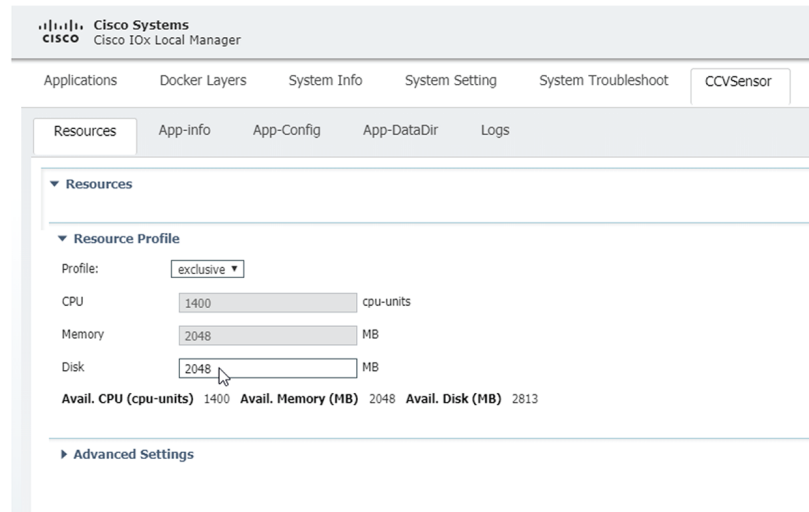

Configure the sensor virtual application (IE3x00/IE9x00)

1. Click **Activate** to launch the configuration of the sensor application.

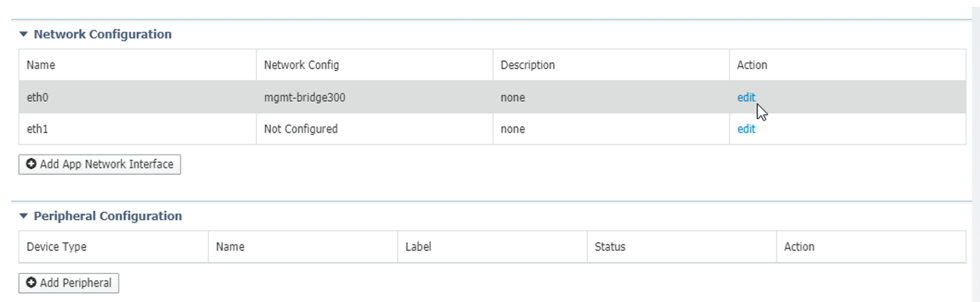

2. Change the disk size from the default size to **1248 MB**. The disk size must **not** be larger than this.

If the field is grayed out, change the profile to **custom** to change the disk value.

3. Bind the interfaces in the container to an interface on the host in Network Configuration. Start with eth0 by clicking **edit** in the eth0 line.

4. Click **Interface Setting**.

▼ Network Configuration

Name	Network Config	Description	Action
eth0	mgmt-bridge300	none	edit

14. Click **Applications** to display the application status:

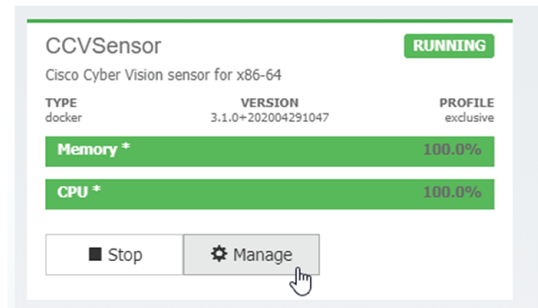

15. The application is activated and needs to be started. To do so, click the **Start** button.

The operation takes several seconds.

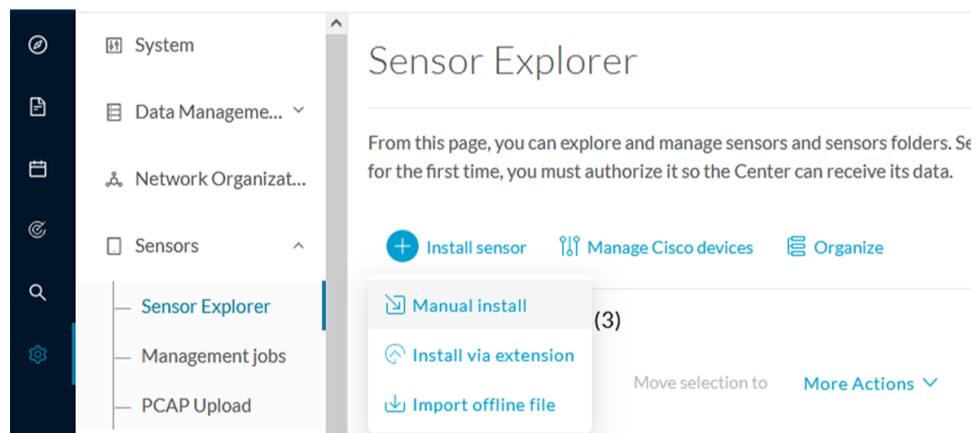

The application status changes to "RUNNING".

Generate the provisioning package

1. In Cisco Cyber Vision, navigate to Admin > Sensors > Sensor Explorer and click **Install sensor**, then **Manual install**.

The manual install wizard appears.

2. Select **Cisco IOx Application** and click **Next**.

The screenshot shows a web interface titled "Manual install". On the left is a dark sidebar with navigation icons. The main content area has the heading "Select hardware model". Below the heading is a paragraph: "The manual installation is provided to deploy Cisco IOx Sensor, Cisco IC3000 Industrial Compute Gateway and Sentryo sensors. Please select an hardware below to start configuration." There are five radio button options: "Cisco IC3000", "Cisco IOx Application" (which is selected), "Sentryo SENSOR3", "Sentryo SENSOR5", and "Sentryo SENSOR7". At the bottom left is an "Exit" button with a back arrow, and at the bottom right is a "Next" button.

3. Fill the fields to configure the sensor provisioning package:

- The serial number of the hardware.
- Center IP: leave blank.
- Gateway: add if necessary.
- Optionally, select a capture mode.
- Optionally, select RSPAN (only with Catalyst 9x00 and if using ERSPAN is not possible).

Configure provisioning package

Please fill in the fields below to add configuration to the provisioning package to install.

Sensor Application

Serial number*

Center collection IP

leave blank to use current collection IP

Gateway

Capture mode

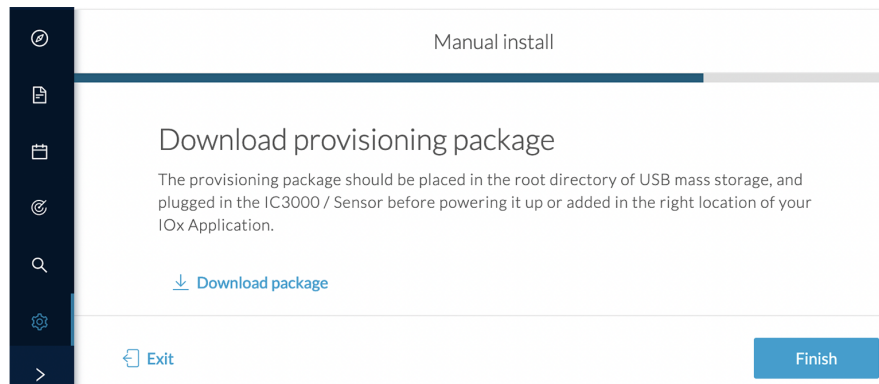

- Optimal (default): analyze the most relevant flows
- All: analyze all the flows
- Industrial only: analyze industrial flows
- Custom: set your filter using a packet filter in tcpdump-compatible syntax

Monitor session type

- ERSPAN: recommended choice for all devices
- RSPAN: use it only with Catalyst 9X00 and when using ERSPAN is not possible

4. Click **Create sensor**.

- Click the link to download the provisioning package.

This will download the provisioning package which is a zip archive file with the following name structure: sbs-sensor-config- \langle serialnumber \rangle .zip (e.g. "sbs-sensor-configFCW23500HDC.zip").

- Click **Finish**.
- A new entry for the sensor appears in the Sensor Explorer list.

The sensor status will switch from Disconnected to New.

erial Number	IP Address	Version	Location	Health status	Processing status	Active Discovery	Uptime	Templ:
FOC27203WMJ				New	Not enrolled	Unavailable	N/A	Di

Import the provisioning package

- In the Local manager, in the IOx configuration menu, click **Manage**.

Cisco IE3400:

Cisco Catalyst 9300:

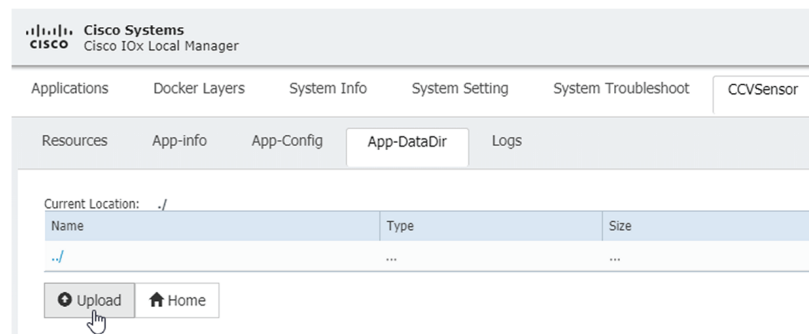

2. Navigate to **App_DataDir**.

For example Cisco IE3400:

3. Click **Upload**.

4. Choose the provisioning package downloaded (i.e. "sbs-sensor-config-FOC2334V01X.zip") and add the exact file name in the path field (i.e. "sbs-sensor-config-FOC2334V01X.zip").

5. Click **OK**.

A popup indicating that Cisco Cyber Vision has been deployed successfully appears.

6. Click **OK**.

Procedure with the CLI

After the [Initial configuration](#), proceed to the steps described in this section.

Configure the sensor application

Note In this section, "CCVSensor" is used as the appid.

1. Connect to the device through SSH or a console.
2. Configure the application payload by typing the following commands.

To enable **Active Discovery**, you must add `guest-interface 2` (in bold in the examples below).

Cisco IE3300 10G/IE3400:

```
enable
configure terminal
app-hosting appid CCVSensor
app-vnic AppGigabitEthernet trunk
guest-interface 2
vlan 507 guest-interface 0
guest-ipaddress 192.168.69.208 netmask 255.255.255.0
vlan 2508 guest-interface 1
guest-ipaddress 169.254.1.2 netmask 255.255.255.0
app-default-gateway 192.168.69.1 guest-interface 0
app-resource profile custom
persist-disk 2048
cpu 1400
memory 1248
vcpu 2
end
```

```

IE3400esc00#
IE3400esc00#enable
IE3400esc00#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
IE3400esc00(config)#app-hosting appid CCVSensor
IE3400esc00(config-app-hosting)#app-vnic AppGigabitEthernet trunk
IE3400esc00(config-config-app-hosting-trunk)#guest-interface 2
IE3400esc00(config-config-app-hosting-trunk-guest)#vlan 507 guest-interface 0
IE3400esc00(config-config-app-hosting-vlan-access-ip)#guest-ipaddress 192.168.69.208 netmask 255.255.255.0
IE3400esc00(config-config-app-hosting-vlan-access-ip)#vlan 2508 guest-interface 1
IE3400esc00(config-config-app-hosting-vlan-access-ip)#guest-ipaddress 169.254.1.2 netmask 255.255.255.0
IE3400esc00(config-config-app-hosting-vlan-access-ip)#app-default-gateway 192.168.69.1 guest-interface 0
IE3400esc00(config-app-hosting)#app-resource profile custom
IE3400esc00(config-app-resource-profile-custom)#persist-disk 2048
IE3400esc00(config-app-resource-profile-custom)#cpu 1400
IE3400esc00(config-app-resource-profile-custom)#memory 1248
IE3400esc00(config-app-resource-profile-custom)#vcpu 2
IE3400esc00(config-app-resource-profile-custom)#end
IE3400esc00#
IE3400esc00#
IE3400esc00#

```

When using l3nat-iox you need to fill in collection information with L3 NAT information, and the **app-default-gateway** is the switch SVI address on the collection vlan. For example,

```
app-default-gateway 169.254.0.1 guest-interface 0
```

Cisco IE9300:

```

enable
configure terminal
app-hosting appid CCVSensor
  app-vnic AppGigabitEthernet trunk
guest-interface 2
  vlan 507 guest-interface 0
    guest-ipaddress 192.168.69.90 netmask 255.255.255.0
  vlan 2508 guest-interface 1
    guest-ipaddress 169.254.1.2 netmask 255.255.255.252
  app-default-gateway 192.168.69.190 guest-interface 0
  app-resource docker
    run-opts 1 --rm
  app-resource profile custom
    cpu 1000
    memory 862
    persist-disk 4000
end

```

```

IE9300_1#
IE9300_1#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
IE9300_1(config)#app-hosting appid CCVSensor
IE9300_1(config-app-hosting)#app-vnic AppGigabitEthernet trunk

CAT9KCCV(config-app-resource-profile-custom)#cpu 7400
CAT9KCCV(config-app-resource-profile-custom)#memory 2048
CAT9KCCV(config-app-resource-profile-custom)#vcpu 2
CAT9KCCV(config-app-resource-profile-custom)#end
CAT9KCCV#

```

For the app-resource profile's custom values, refer to the result of the show app-hosting resource command.

In this example, all maximum values are used for:

- the CPU (CPU available units, here 1400 for the Cisco IE3300 10G/IE3400, 1000 for the Cisco IE9300, and 7400 for the Cisco Catalyst 9300)
- the VCPU (here 2), the memory (Memory available, here 2048)
- the disk (only 2048 MB and 8192 MB respectively are used to let space for application updates)

Install the sensor application

The sensor package is to be retrieved on cisco.com. The file has the following name structure:

- CiscoCyberVision-IOx-aarch64-<VERSION>.tar (Cisco IE3300 10G/IE3400/IE9300).
- CiscoCyberVision-IOx-x86-64-<VERSION>.tar (Cisco Catalyst 9300).

1. Copy the package to a USB key or in the flash memory.
2. Type the following commands on the CLI:

```

enable
app-hosting install appid CCVSensor package usbflash0:<FILENAME>.tar

```

Cisco IE3300 10G/IE3400/IE9300:

```

IE340CCV#app-hosting install appid CCVSensor package usbflash0:CiscoCyberVision-IOx-aarch64-3.1.0-RC4.tar
Installing package 'usbflash0:CiscoCyberVision-IOx-aarch64-3.1.0-RC4.tar' for 'CCVSensor'. Use 'show app-hosting list' f
or progress.
IE340CCV#

```

Cisco Catalyst 9300:

```
CAT9KCCV#
CAT9KCCV#enable
CAT9KCCV#app-hosting install appid CCVSensor package usbflash0:CiscoCyberVision-IOx-x86-64-3.1.0-RC4.tar
Installing package 'usbflash0:CiscoCyberVision-IOx-x86-64-3.1.0-RC4.tar' for 'CCVSensor'. Use 'show app-hosting list' fo
r progress.
CAT9KCCV#
```

Note Adjust "usbflash0:" in accordance with the sensor package's localization (USB port or flash memory).

Note Replace "CiscoCyberVision-IOx-aarch64-<VERSION>.tar" with the right filename.

3. Check that the application is in "DEPLOYED" state:

```
show app-hosting list
```

For example: Cisco IE3400

```
IE340CCV#
IE340CCV#show app-hosting list
App id                               State
-----
CCVSensor                             DEPLOYED
IE340CCV#
```

4. Activate the application using the following command:

```
app-hosting activate appid CCVSensor
```

For example: Cisco IE3400

```
IE340CCV#app-hosting activate appid CCVSensor
CCVSensor activated successfully
Current state is: ACTIVATED
IE340CCV#
```

5. Start the application using the following command:

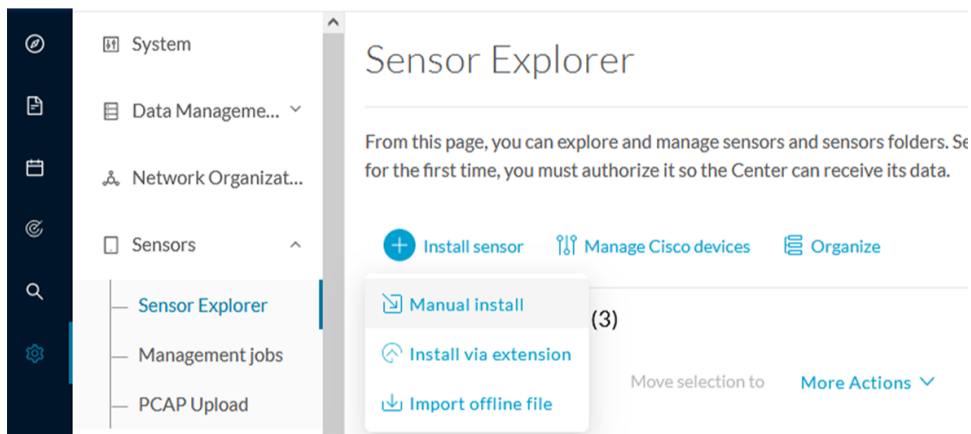

```
app-hosting start appid CCVSensor
```

For example: Cisco IE3400:

```
IE340CCV#
IE340CCV#app-hosting start appid CCVSensor
CCVSensor started successfully
Current state is: RUNNING
IE340CCV#
```

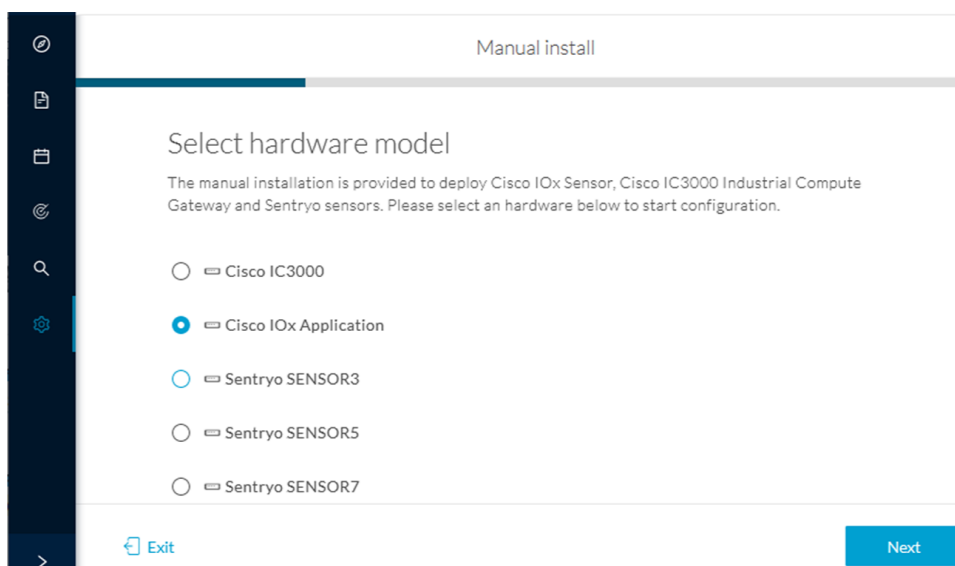

Generate the provisioning package

1. In Cisco Cyber Vision, navigate to Admin > Sensors > Sensor Explorer and click **Install sensor**, then **Manual install**.

The manual install wizard appears.

2. Select **Cisco IOx Application** and click **Next**.

3. Fill the fields to configure the sensor provisioning package:
 - The serial number of the hardware.
 - Center IP: leave blank.
 - Gateway: add if necessary.
 - Optionally, select a capture mode.
 - Optionally, select RSPAN (only with Catalyst 9x00 and if using ERSPAN is not possible).

Configure provisioning package

Please fill in the fields below to add configuration to the provisioning package to install.

Sensor Application

Serial number*

Center collection IP

leave blank to use current collection IP

Gateway

Capture mode

- Optimal (default): analyze the most relevant flows
- All: analyze all the flows
- Industrial only: analyze industrial flows
- Custom: set your filter using a packet filter in tcpdump-compatible syntax

Monitor session type

- ERSPAN: recommended choice for all devices
- RSPAN: use it only with Catalyst 9X00 and when using ERSPAN is not possible

4. Click **Create sensor**.

5. Click the link to download the provisioning package.

Manual install

Download provisioning package

The provisioning package should be placed in the root directory of USB mass storage, and plugged in the IC3000 / Sensor before powering it up or added in the right location of your IOx Application.

[Download package](#)

[Exit](#) [Finish](#)

This will download the provisioning package which is a zip archive file with the following name structure: sbs-sensor-config-<serialnumber>.zip (e.g. "sbs-sensor-configFCW23500HDC.zip").

6. Click **Finish**.

7. A new entry for the sensor appears in the Sensor Explorer list.

The sensor status will switch from Disconnected to New.

erial Number	IP Address	Version	Location	Health status	Processing status	Active Discovery	Uptime	Templ:
FOC27203WMJ				New	Not enrolled	Unavailable	N/A	Di

Copy the sensor application provisioning package

- Copy the provisioning package from the USB key to the application using the following command:

```
app-hosting data appid CCVSensor copy usbflash0:sbs-sensor-config-<SERIAL-NUMBER>.zip
sbs-sensor-config-<SERIAL-NUMBER>.zip
```

For example: Cisco IE3400

```
IE340CCV#
IE340CCV#$ data appid CCVSensor copy usbflash0:sbs-sensor-config-FOC2334V01X.zip sbs-sensor-config-FOC2334V01X.zip
Successfully copied file /usbflash0/sbs-sensor-config-FOC2334V01X.zip to CCVSensor as sbs-sensor-config-FOC2334V01X.zip
IE340CCV#
```

- A new entry for the sensor appears in the Sensor Explorer list.

The sensor status will switch from Disconnected to Connected.

<input type="checkbox"/>	Label	IP Address	Version	Location	Health status	Processing status	Active Discovery	Uptime
<input type="checkbox"/>					Disconnected	Disconnected		NA
<input type="checkbox"/>								NA
<input type="checkbox"/>	FCW2445P6X5	192.168.49.21	4.1.0+202202151440		Connected	Pending data	Enabled	4 days

Final step

In the sensor's CLI save the product's configuration by typing the following command:

```
write mem
```
