

Configure a Basic Policy

Configure a basic security policy with the following settings:

- Inside and outside interfaces—Assign a static IP address to the inside interface, and use DHCP for the outside interface.
- DHCP server—Use a DHCP server on the inside interface for clients.
- Default route—Add a default route through the outside interface.
- NAT—Use interface PAT on the outside interface.
- Access control—Allow traffic from inside to outside.

You can also ccustomize your security policy to include more advanced inspections.

- Configure Interfaces, on page 1
- Configure the DHCP Server, on page 6
- Add the Default Route, on page 8
- Configure NAT, on page 10
- Configure an Access Control Rule, on page 13
- Deploy the Configuration, on page 15

Configure Interfaces

When you use the device manager for initial setup instead of using the CLI, the following interfaces are preconfigured:

- Ethernet 1/1-outside, IP address from DHCP, IPv6 autoconfiguration
- VLAN1— inside, 192.168.95.1/24
- Default route—Obtained through DHCP on the outside interface

If you performed additional interface-specific configuration within device manager before registering with the management center, then that configuration is preserved.

If you used the CLI for initial setup, there is no preconfiguration of your device.

In both cases, you need to perform additional interface configuration after you register the device. For CLI initial setup, you must add the VLAN1 interface for the inside switch ports. Additional configuration includes

converting switch ports to firewall interfaces as desired, assigning interfaces to security zones, and changing IP addresses.

The following example configures a routed-mode inside interface (VLAN1) with a static address and a routed-mode outside interface using DHCP (Ethernet1/1). It also adds a DMZ interface for an internal web server.

Procedure

Step 1 Choose **Devices** > **Device Management**, and click **Edit** (\Diamond) for the device.

Step 2 Click Interfaces.

Figure 1: Interfaces

Device Routing Interfaces	Inline Sets	DHCP VTEP	SNMP							
Interfaces Virtual Tunnels					Q	Search by nar	ne	Sync	Device Add In	nterfaces ~
Interface	Logical Name	Туре	Security Zones	MAC Address (Active/Standby) IP Address	Path Monitorin	Port Mode	VLAN Usage	SwitchPo	Virtual Router	
Management1/1	management	Physical			Disabled				Global	Q -¢
Ethernet1/1	outside	Physical	outside	10.89.5.29/255.255.255.192(Disabled				Global	D
Ethernet1/2		Physical			Disabled	Access	1			Ø
Ethernet1/3		Physical			Disabled	Access	1			Ø
Ethernet1/4		Physical			Disabled	Access	1			Ø

- **Step 3** If you used the CLI for initial setup, enable the switch ports.
 - a) Click **Edit** (\Diamond) for the switch port.

Figure 2: Enable Switch Port

Edit Physical Interface
General Hardware Configuration
Interface ID: Ethernet1/2
Enabled
Port Mode:
Access ~
VLAN ID:
(1 - 4070) Protected:

b) Enable the interface by checking the **Enabled** check box.

- c) (Optional) Change the VLAN ID; the default is 1. You will next add a VLAN interface to match this ID.
- d) Click OK.
- **Step 4** Add (or edit) the **inside** VLAN interface.
 - a) Click Add Interfaces > VLAN Interface, or if this interface already exists, click Edit (2) for the interface. Figure 3: Add VLAN Interface

Add VLAN Interface	0
General IPv4 IPv6 Advanced	
Name: inside Inside Description: Mode:	
None Security Zone: inside_zone MTU:	
(1500 (64 - 9198) Priority: 0	(0 - 65535)
VLAN ID *: 1 (1 - 4070) Disable Forwarding on Interface Vlan:	
None V Associated Interface	Port Mo
<u> </u> N	o records to display

- b) From the Security Zone drop-down list, choose an existing inside security zone or add a new one by clicking New.
 For example, add a zone called inside_zone. You apply your security policy based on zones or groups.
 If VLAN1 was preconfigured, the rest of these fields are optional.
- c) Enter a Name up to 48 characters in length.

For example, name the interface inside.

- d) Check the **Enabled** check box.
- e) Leave the Mode set to None.

f) Set the VLAN ID to 1.

By default, all of the switchports are set to VLAN 1; if you choose a different VLAN ID here, you need to also edit each switchport to be on the new VLAN ID.

You cannot change the VLAN ID after you save the interface; the VLAN ID is both the VLAN tag used, and the interface ID in your configuration.

- g) Click the IPv4 and/or IPv6 tab.
 - IPv4—Choose Use Static IP from the drop-down list, and enter an IP address and subnet mask in slash notation.

For example, enter 192.168.1.56/24

Figure 4: Set Inside IP Address

Add VLAN Interface

General	IPv4	IPv6	Advanced

Ethernet" MTU: 1500 (64 - 9198) Priority: 0 Propagate NVE Only:	I/1	Group Ta	ag:	(0 - 65535)

a) From the Security Zone drop-down list, choose an existing outside security zone or add a new one by clicking New.
 For example, add a zone called outside_zone.

If VLAN1 was pre-configured, the rest of these fields are optional.

b) Enter a Name up to 48 characters in length.

For example, name the interface outside.

- c) Check the Enabled check box.
- d) Leave the Mode set to None.
- e) Click the IPv4 and/or IPv6 tab.
 - IPv4—Choose Use DHCP, and configure the following optional parameters:
 - Obtain default route using DHCP—Obtains the default route from the DHCP server.
 - **DHCP route metric**—Assigns an administrative distance to the learned route, between 1 and 255. The default administrative distance for the learned routes is 1.

Figure 6: Set Outside IP Address

Edit Physical Interface

General	IPv4	IPv6	Path Monito	oring

1				
(1 - 255)				

• IPv6—Check the Autoconfiguration check box for stateless autoconfiguration.

f) Click OK.

- **Step 6** Configure a DMZ interface to host a web server, for example.
 - a) Disable switch-port mode for the switch port you want to use for the DMZ by clicking the slider in the **SwitchPort** column so it shows as disabled (...).
 - b) Click **Edit** (\Diamond) for the interface.
 - c) From the Security Zone drop-down list, choose an existing DMZ security zone or add a new one by clicking New.
 For example, add a zone called dmz_zone.
 - d) Enter a Name up to 48 characters in length.

For example, name the interface **dmz**.

- e) Check the Enabled check box.
- f) Leave the Mode set to None.
- g) Click the IPv4 and/or IPv6 tab and configure the IP address as desired.
- h) Click **OK**.
- Step 7 Click Save.

Configure the DHCP Server

Enable the DHCP server if you want clients to use DHCP to obtain IP addresses from the firewall.

Procedure

- **Step 1** Choose **Devices** > **Device Management**, and click **Edit** (\Diamond) for the device.
- **Step 2** Choose **DHCP** > **DHCP Server**.

	Figure	7:	DHCP	Serve
--	--------	----	------	-------

Device Routing Interfac	ces Inline Sets DHCP VTEP	SNMP	
DHCP Server DHCP Relay DDNS	Ping Timeout 50 Lease Length 3600 Auto-Configuration Interface) (10 - 10000 ms) (300 - 10,48,575 sec)	
	Override Auto Configured Sett	ings:	
	Primary DNS Server Secondary DNS Server	Primary WINS Server	+
	Server) +	+
	Interface	Address Pool	+ Add
		No records to di	splay

Step 3 In the **Server** area, click **Add** and configure the following options.

Figure 8: Add Server

Add Server		(?)
Interface*

192.168.1.2-192.168.1.55		
(2.2.2.10-2.2.2.20)		
Enable DHCP Server		
	Cancel	ок

- Interface—Choose the interface name from the drop-down list.
- Address Pool—Set the range of IP addresses. The IP addresses must be on the same subnet as the selected interface and cannot include the IP address of the interface itself.
- Enable DHCP Server—Enable the DHCP server on the selected interface.

Step 4 Click OK.

Step 5 Click Save.

Add the Default Route

The default route normally points to the upstream router reachable from the outside interface. If you obtained the outside address from DHCP, your device might have already received a default route. If you need to manually add the route, complete this procedure.

Procedure

- **Step 1** Choose **Devices** > **Device Management**, and click **Edit** (\Diamond) for the device.
- **Step 2** Choose **Routing** > **Static Route**.

Figure 9: Static Route

Device Routing Interfaces	Inline Sets DH	CP VTEP	SNMP				
Manage Virtual Routers							+ Add Route
Global ~							
	Network 🔺	Interface	Virtual Router	Gateway	Tunneled	Metric	Tracked

EIGRP							
RIP							
Policy Based Routing							
✓ BGP							
IPv4							
IPv6							
Static Route							
✓ Multicast Routing							

If you received a default route from the DHCP server, it will show in this table.

Step 3 Click Add Route, and set the following options.

Figure 10: Add Static Route Configuration

Add Static Route Configuration	?
Type: Interface*	
outside ~	
(Interface starting with this icon kignifies it is available for route leak)	
Available Network C + Selected Network	
Q Search Add any-ipv4	ū
any-ipv4 gateway	
IPv4-Benchmark-Tests	
IPv4-Link-Local	
IPv4-Multicast	
Gateway* +	
Metric:	
1	
(1 - 254)	
Tunneled: Used only for default Route)	
Route Tracking:	
Cancel	ок

- Type—Click the IPv4 or IPv6 radio button depending on the type of static route that you are adding.
- Interface—Choose the egress interface; typically the outside interface.
- Available Network—Choose any-ipv4 for an IPv4 default route, or any-ipv6 for an IPv6 default route, and click Add to move it to the Selected Network list.
- Gateway or IPv6 Gateway—Enter or choose the gateway router that is the next hop for this route. You can provide an IP address or a Networks/Hosts object.

Step 4 Click OK.

The route is added to the static route table.

Step 5 Click Save.

Configure NAT

This procedure creates a NAT rule for internal clients to convert the internal addresses to a port on the outside interface IP address. This type of NAT rule is called *interface Port Address Translation (PAT)*.

Procedure

New Policy			(?)	
Name:				
FTD_policy				
Description:				
Targeted Devices				
Select devices to which you want to ap	ply this policy.	Selected Devices an	d Templates	
Q Search by name or value		192.168.0.124		
192168.0.124		192.168.0.155	Ū	
192.168.0.155				
	Add to Policy			
			J	

The policy is added the management center. You still have to add rules to the policy.

Figure 12: NAT Policy

l	J					

Step 6 On the **Translation** page, configure the following options:

Figure 15: Translation

Interface Objects	Translation	PAT Pool	Advanced
Original Packet			Translated Packet
Original Source:* all-ipv4	~ +		Translated Source:
Original Port:	~		Destination Interface Objects in 'Interface Objects' tab will be used
			Translated Port:

• Original Source—Click Add (+) to add a network object for all IPv4 traffic (0.0.0.0/0). *Figure 16: New Network Object*

New Network Object		0
Name all-ipv4		
Description		
Network Host Range Network	O FQDN	
0.0.0/0		
	Cancel	Save

Note You cannot use the system-defined **any-ipv4** object, because Auto NAT rules add NAT as part of the object definition, and you cannot edit system-defined objects.

• Translated Source—Choose Destination Interface IP.

Step 7 Click **Save** to add the rule.

The rule is saved to the **Rules** table.

Step 8 Click **Save** on the **NAT** page to save your changes.

L

Configure an Access Control Rule

If you created a basic **Block all traffic** access control policy when you registered the device, then you need to add rules to the policy to allow traffic through the device. The access control policy can include multiple rules that are evaluated in order.

This procedure creates an access control rule to allow all traffic from the inside zone to the outside zone.

Procedure

Choose Policy > Access Policy > Access Policy, and click Edit (\Diamond) for the access control policy assigned to the device. Step 1 2

Cton	1
Slep	4

Click Add Rule, and set the following parameters. Figure 17: Source Zone

1	0 Add Rule	e							
Name	inside-to-outside	•						Action S Allow	Lc

		📥 inside		
				Any
+ Create Security Zone Object		Add Source Zon	е	5 Add Destination Zone

4. Select the outside zone from Zones.

5. Click Add Destination Zone.

Leave the other settings as is.

Step 3 (Optional) Customize associated policies by clicking on the policy type in the packet flow diagram.

Prefilter, Decryption, Security Intelligence, and Identity policies are applied before an access control rule. Customizing these policies is not required, but after you know your network's needs, they let you improve network performance by either fastpathing trusted traffic (bypassing processing) or blocking traffic so no further processing is required.

Figure 19: Policies Applied Before Access Control

🖵 Packets 🔸 🥑	Prefilter Rules \rightarrow \bigcirc	Decryption → €	Security Intelligence	→ 🔿 Identity → 🄇	Access Control
---------------	--	----------------	-----------------------	------------------	----------------

• **Prefilter Rules**—The Default Prefilter Policy passes all traffic for the other rules to act on (analyzes). The only change to the default policy you can make is to **block** tunnel traffic. Otherwise, you can create a new prefilter policy to associate with the access control policy that can analyze (pass on), fastpath (bypass further checks) or block.

Prefiltering lets you improve performance by dealing with traffic before it gets any further, by either blocking or fastpathing. In a new policy, you can add *tunnel* rules and *prefilter* rules. A tunnel rule lets you fastpath, block, or rezone plaintext (non-encrypted), passthrough tunnels. A prefilter rule lets you fastpath or block non-tunneled traffic identified by IP address, port, and protocol.

For example, if you know you want to block all FTP traffic on your network, but fastpath SSH traffic from an administrator, you can add a new prefilter policy.

- **Decryption**—Decryption is not applied by default. Decryption is a way to expose network traffic to deep inspection. In most cases, you don't want to decrypt traffic, and can only do so if it is legally allowed. For maximum network protection, a decryption policy might be a good idea for traffic going to critical servers or coming from untrusted network segments.
- Security Intelligence—(Requires the IPS license) Security Intelligence is enabled by default. Security Intelligence is another early defense against malicious activity applied before passing connections to the access control policy for further processing. Security Intelligence uses reputation intelligence to quickly block connections to or from IP addresses, URLs, and domain names provided by Talos, the threat intelligence organization at Cisco. You can add or delete additional IP addresses, URLs, or domains if desired.
- **Note** If you do not have the IPS license, this policy will not be deployed even though it shows in your access control policy as enabled.
- **Identity**—Identity is not applied by default. You can require a user to authenticate before allowing traffic to be processed by the access control policy.
- **Step 4** (Optional) Add an Intrusion policy that is applied after the access control rule.

The Intrusion policy is a defined set of intrusion detection and prevention configurations that inspects traffic for security violations. The management center includes many system-provided policies you can enable as-is or that you can customize. This step enables a system-provided policy.

a) Click the **Intrusion Policy** drop-down list.

L

🛡 Int	rusion Policy	None ^
ags		System-Provided Policies
Selected	d Sources: 1	Balanced Security and Conne
Collaps	e All	Connectivity Over Security
ZONE	🗸 1 Object	Maximum Detection
📫 inside_		Security Over Connectivity
		User-Created Policies

- b) Choose one of the system-provided policies from the list.
- **Step 5** (Optional) Add a File policy that is applied after the access control rule.
 - a) Click the **File Policy** drop-down list and choose either an existing policy or add one by choosing the **Open File Policy** List.

Figure 21: File Policy

File Policy	None	^
	No options	
ns and Applicatio	Open File Policy List [↗]	

For a new policy, the **Policies** > **Malware & File** page opens in a separate tab.

- b) See the Cisco Secure Firewall Device Manager Configuration Guide for details on creating the policy.
- c) Return to the Add Rule page and select the newly created policy from the drop-down list.

Step 6 Click Apply.

The rule is added to the **Rules** table.

Step 7 Click Save.

Deploy the Configuration

Deploy the configuration changes to the device; none of your changes are active on the device until you deploy them.

Procedure

Step 1 Click **Deploy** in the upper right.

Figure 22: Deploy

Step 2 For a quick deployment, check specific devices and then click **Deploy**.
