

Data Structure Mapping

This appendix provides information about the data objects that are migrated, partially migrated, and not migrated from Cisco Secure ACS, Release 5.5 or later to Cisco ISE, Release 2.7.

- Data Structure Mapping, on page 1
- Supported Data Objects for Migrating from Cisco Secure ACS 4.2, on page 1
- Migrated Data Objects, on page 2
- Partially Migrated Data Objects, on page 3
- Data Objects Not Migrated, on page 4
- Data Information Mapping, on page 4

Data Structure Mapping

Data structure mapping is the process by which data objects are analyzed and validated in the migration tool during the export phase.

Supported Data Objects for Migrating from Cisco Secure ACS 4.2

Following are the data objects supported for migrating from Cisco Secure ACS 4.2 to Cisco ISE 2.7

- Users
- User Groups
- User Attributes
- Network Devices
- Network Device Group (NDG) Nodes
- NDG Root type

Migrated Data Objects

The following data objects are migrated from Cisco Secure ACS, Release 5.5 or above to Cisco ISE, Release 2.7:

- Network device group (NDG) types and hierarchies
- Network devices with IPv4 or IPv6 address
- · Default network device
- Network device ranges (in all octets)
- External RADIUS servers
- External TACACS+ servers
- TACACS+ server sequence
- TACACS+ settings
- Stateless session resume capability settings
- · Identity groups
- · Internal users
- · Internal users authorization cache
- Internal users with enable password change
- Internal users with password type configured as external Identity store
- Disable user account if date exceeds
- Global option for disabling user account after n days of inactivity
- Internal endpoints (hosts)
- Lightweight Directory Access Protocol (LDAP)
- Common Name and Distinguished name for Group Name attribute in LDAP Identity Store
- Microsoft Active Directory (AD)
- RSA
- RADIUS token
- Certificate authentication profiles
- Date and time conditions (Partial support, see Unsupported Rule Elements)
- Network conditions (end station filters, device filters, device port filters)
- Maximum user sessions
- RADIUS attribute and vendor-specific attributes (VSA) values
- RADIUS vendor dictionaries

- · Internal users attributes
- · Internal endpoint attributes
- TACACS+ Profiles
- Downloadable access control lists (DACLs)
- Identity (authentication) policies
- Authentication, Authorization, and Authorization exception polices for TACACS+ (for policy objects)
- Date and time conditions
- TACACS+ Command Sets
- Authorization exception policies (for network access)
- Service selection policies (for network access)
- RADIUS proxy service
- TACACS+ proxy service
- · User password complexity
- Identity sequence and RSA prompts
- UTF-8 data
- EAP authentication protocol—PEAP-TLS
- User check attributes
- · Dial-in attributes
- Crypto binding attributes
- Weak ciphers support for allowed protocols
- Identity sequence advanced option
- Additional attributes available in policy conditions—AuthenticationIdentityStore
- Additional string operators—Start with, Ends with, Contains, Not contains
- RADIUS identity server attributes
- Length included flag (L-bit) in EAP-MD5, EAP-TLS, LEAP, PEAP, and EAP-FAST authentication

Partially Migrated Data Objects

The following data objects are partially migrated from Cisco Secure ACS, Release 5.5 or above to Cisco ISE, Release 2.7:

- Host attributes that are of type IP address and Date are not migrated.
- RSA sdopts.rec file and secondary information are not migrated.
- Multi-Active Directory domain (only Active Directory domain joined to the primary) is migrated.

 LDAP configuration defined for primary ACS instance is migrated. Secondary ACS instance specific configurations are not migrated.

Data Objects Not Migrated

The following data objects are not migrated from Cisco Secure ACS, Release 5.5 or above to Cisco ISE:

- Monitoring reports
- · Scheduled backups
- Repositories
- Administrators, roles, and administrators settings
- Customer/debug log configurations
- Deployment information (secondary nodes)
- Certificates (certificate authorities and local certificates)

You must manually import your certificates because they are not migrated. For identity stores that use certificates, you must map the imported certificate to the ID store. If you were using identity source sequences, you must create new sequences that duplicate the originals.

- Trustsec related configuration
- Display RSA node missing secret
- Additional attribute available in a policy condition—NumberOfHoursSinceUserCreation
- · Wildcards for hosts
- OCSP service
- Syslog messages over SSL/TCP
- Configurable copyright banner

Data Information Mapping

This section lists the data that is mapped during the export process. The tables include object categories from Cisco Secure ACS, Release 5.5 or above and its equivalent in Cisco ISE, Release 2.7. The data-mapping tables in this section list the status of valid or not valid data objects mapped when migrating data during the export stage of the migration process.

Network Device Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Name	Migrates as is
Description	Migrates as is

Cisco Secure ACS Properties	Cisco ISE Properties
Network device group	Migrates as is
Single IP address	Migrates as is
Single IP and subnet address	Migrates as is
IP ranges	IP ranges in all the octets with Exclude IP option, are migrated
TACACS information	Migrates as is
RADIUS shared secret	Migrates as is
TACACS+ shared secret	Migrates as is
CTS	Migrates as is
SNMP	SNMP data is available only in Cisco ISE; therefore, there is no SNMP information for migrated devices.
Model name	This property is available only in Cisco ISE (and its value is the default, which is "unknown").
Software version	This property is available only in Cisco ISE (and its value is the default, which is "unknown").

NDG Types Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Name	Name
Description	Description

Note

Cisco Secure ACS, Release 5.5 or above can support more than one network device group (NDG) with the same name. Cisco ISE, Release 2.7 does not support this naming scheme. Therefore, only the first NDG type with any defined name is migrated.

NDG Hierarchy Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Name	Name
Description	Description

Cisco Secure ACS Properties	Cisco ISE Properties
Parent	No specific property is associated with this property because this value is entered only as part of the NDG hierarchy name. In addition, the NDG type is the prefix for this object name.

Default Network Devices Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Default network device status	Default network device status
Network device group	Not migrated
TACACS+ Shared Secret	Shared Secret
TACACS+ Single Connect Device	Enable Single Connect Mode
Legacy TACACS+ Single Connect Support	Legacy Cisco Device
TACACS+ Draft Compliant Single Connect Support	TACACS+ Draft Compliance Single Connect Support
RADIUS - shared secret	Shared Secret
RADIUS - CoA port	Not migrated
RADIUS - Enable keywrap	Enable keywrap
RADIUS - Key encryption key	Key encryption key
RADIUS - Message authenticator code key	Message authenticator code key
RADIUS - Key input format	Key input format

Identity Group Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Name	Name
Description	Description
Parent	This property is migrated as part of the hierarchy details.

Note

Cisco ISE, Release 2.7 contains user and endpoint identity groups. Identity groups in Cisco Secure ACS, Release 5.5 or above are migrated to Cisco ISE, Release 2.7 as user and endpoint identity groups because a user needs to be assigned to a user identity group and an endpoint needs to be assigned to an endpoint identity group.

User Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Name	Name
Description	Description
Status	No need to migrate this property. This property does not exist in Cisco ISE.
Identity group	Migrates to identity groups in Cisco ISE
Password	Password
Enable password	Password
Change password on next login	Not migrated
User attributes list	User attributes are imported from the Cisco ISE and are associated with users
Expiry days	Supported

Hosts (Endpoints) Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
MAC address	Migrates as is
Status	Not migrated
Description	Migrates as is
Identity group	Migrates the association to an endpoint group.
Attribute	Endpoint attribute is migrated.
Authentication state	This is a property available only in Cisco ISE (and its value is a fixed value, "Authenticated").
Class name	This is a property available only in Cisco ISE (and its value is a fixed value, "TBD").

Cisco Secure ACS Properties	Cisco ISE Properties
Endpoint policy	This is a property available only in Cisco ISE (and its value is a fixed value, "Unknown").
Matched policy	This is a property available only in Cisco ISE (and its value is a fixed value, "Unknown").
Matched value	This is a property available only in Cisco ISE (and its value is a fixed value, "0").
NAS IP address	This is a property available only in Cisco ISE (and its value is a fixed value, "0.0.0.0").
OUI	This is a property available only in Cisco ISE (and its value is a fixed value, "TBD").
Posture status	This is a property available only in Cisco ISE (and its value is a fixed value, "Unknown").
Static assignment	This is a property available only in Cisco ISE (and its value is a fixed value, "False").

LDAP Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Name	Name
Description	Description
Server connection information	Migrates as is
Directory organization information	Migrates as is
Directory groups	Migrates as is
Directory attributes	Migration is done manually (using the Cisco Secure ACS to Cisco ISE migration tool).

Note

Only the LDAP configuration defined for the primary ACS instance is migrated.

Active Directory Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Domain name	Migrates as is
User name	Migrates as is

Cisco Secure ACS Properties	Cisco ISE Properties
Password	Migrates as is
Allow password change	Migrates as is
Allow machine access restrictions	Migrates as is
Aging time	Migrates as is
User attributes	Migrates as is
Groups	Migrates as is
Multiple domain support	Only domains joined to primary ACS instance migrated

Certificate Authentication Profile Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Name	Name
Description	Description
Principle user name (X.509 attribute)	Principle user name (X.509 attribute).
Binary certificate comparison with certificate from LDAP or AD	Binary certificate comparison with certificate from LDAP or AD.
AD or LDAP name for certificate fetching	AD or LDAP name for certificate fetching.

Identity Store Sequences Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Name	Name
Description	Description
Certificate based, certificate authentication profile	Certificate based, certificate authentication profile
Password based	Authentication search list
Advanced options > if access on current IDStore fails than break sequence	Do not access other stores in the sequence and set the "AuthenticationStatus" attribute to "ProcessError."
Advanced options > if access on current IDStore fails then continue to next	Treated as "User Not Found" and proceed to the next store in the sequence.
Attribute retrieval only > exit sequence and treat as "User Not Found"	Not supported (should be ignored)

Authorization Profile Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Name	Name
Description	Description
DACLID (downloadable ACL ID)	Migrates as is
Attribute type (static and dynamic)	 Migrates as is if static attribute. Migrated as is if dynamic attribute.
Attributes (filtered for static type only)	RADIUS attributes

Shell Profile Attributes Mapping

Cisco Secure ACS	Cisco ISE	
Common Task Attributes		
Name	Name	
Description	Description	
Default Privilege (Static and Dynamic)	Default Privilege (0 to 15)	
Maximum Privilege (Static)	Maximum Privilege (0 to 15)	
Access Control List (Static and Dynamic)	Access Control List (Static and Dynamic)	
Auto Command (Static and Dynamic)	Auto Command (Static and Dynamic)	
No Callback Verify (Static and Dynamic)	_	
No Escape (Static and Dynamic)	No Escape (True or False)	
No Hang up (Static and Dynamic)	_	
Timeout (Static and Dynamic)	Timeout (Static and Dynamic)	
Idle Time (Static and Dynamic)	Idle Time (Static and Dynamic)	
Callback Line (Static and Dynamic)	_	
Callback Rotary (Static and Dynamic)	_	
Custom Attributes		
Attribute	Name	
Requirement (Mandatory and Optional)	Type (Mandatory and Optional)	
Value (Static and Dynamic)	Value (Static and Dynamic)	

Command Sets Attributes Mapping

Cisco Secure ACS	Cisco ISE
Name	Name
Description	Description
Permit any command that is not in the table below	Permit any command that is not listed below
Grant (Permit, Deny, Deny Always)	Grant (Permit, Deny, Deny Always)
Command	Command
Arguments	Arguments

Downloadable ACL Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Name	Name
Description	Description
DACL content	DACL content

RADIUS Dictionary (Vendors) Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Name	Name
Description	Description
Vendor ID	Vendor ID
Attribute prefix	No need to migrate this property.
Vendor length field size	Vendor attribute type field length.
Vendor type field size	Vendor attribute size field length.

Note

The migration tool supports migration of vendor and its attributes based on the ID of the vendor and its attributes.

If the vendor name is user-defined in Cisco Secure ACS and predefined in Cisco ISE and their IDs are different, the export process succeeds but the import process fails. If the vendor name is predefined in Cisco Secure ACS and Cisco ISE and their IDs are same, you will receive a warning message. If the vendor name is user-defined in Cisco Secure ACS and predefined in Cisco ISE and their IDs are same, the export process fails.

RADIUS Dictionary (Attributes) Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Name	Name
Description	Description
Attribute ID	No specific property associated with this because this value is entered only as part of the NDG hierarchy name (NDG type is the prefix for this object name).
Direction	Not supported in Cisco ISE
Multiple allowed	Not supported in Cisco ISE
Attribute type	Migrates as is
Add policy condition	Not supported in Cisco ISE
Policy condition display name	Not supported in Cisco ISE

Note

Only the user-defined RADIUS attributes that are not part of Cisco Secure ACS, Release 5.5 or above installation need to be migrated.

Identity Dictionary Mapping

Cisco Secure ACS Properties	Cisco ISE Properties	
Attribute	Attribute name	
Description	Description	
Internal name	Internal name	
Attribute type	Data type	
Maximum length	Not migrated	

Cisco Secure ACS Properties	Cisco ISE Properties
Default value	Not migrated
Mandatory fields	Not migrated
User	The dictionary property accepts this value ("user").

Identity Attributes Dictionary Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Attribute	Attribute name
Description	Internal name
Name	Migrates as is
Attribute type	Data type
No such property	Dictionary (Set with the value "InternalUser" if it is a user identity attribute, or "InternalEndpoint" if it is a host identity attribute.)
Not exported or extracted yet from the Cisco Secure ACS	Allowed value = display name
Not exported or extracted yet from the Cisco Secure ACS	Allowed value = internal name
Not exported or extracted yet from the Cisco Secure ACS	Allowed value is default
Maximum length	None
Default value	None
Mandatory field	None
Add policy condition	None
Policy condition display name	None

External RADIUS Server Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Name	Name
Description	Description
Server IP address	Hostname

Cisco Secure ACS Properties	Cisco ISE Properties
Shared secret	Shared secret
Authentication port	Authentication port
Accounting port	Accounting port
Server timeout	Server timeout
Connection attempts	Connection attempts

External TACACS+ Server Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Name	Name
Description	Description
IP address	Host IP
Connection Port	Connection Port
Network Timeout	Timeout
Shared secret	Shared secret

RADIUS Token Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Name	Name
Description	Description
Safeword server	Safeword server
Enable secondary appliance	Enable secondary appliance
Always access primary appliance first	Always access primary appliance first
Fallback to primary appliance in minutes	Fallback to primary appliance in minutes
Primary appliance IP address	Primary appliance IP address
Primary shared secret	Primary shared secret
Primary authentication port	Primary authentication port
Primary appliance TO (timeout)	Primary appliance TO
Primary connection attempts	Primary connection attempts

Cisco Secure ACS Properties	Cisco ISE Properties
Secondary appliance IP address	Secondary appliance IP address
Secondary shared secret	Secondary shared secret
Secondary authentication port	Secondary authentication port
Secondary appliance TO	Secondary appliance TO
Secondary connection attempts	Secondary connection attempts
Advanced > treat reject as authentication flag fail	Advanced > treat reject as authentication flag fail.
Advanced > treat rejects as user not found flag	Advanced > treat rejects as user not found flag.
Advanced > enable identity caching and aging value	Advanced > enable identity caching and aging value.
Shell > prompt	Authentication > prompt
Directory attributes	Authorization > attribute name (In cases where the dictionary attribute lists in Cisco Secure ACS includes the attribute "CiscoSecure-Group-Id," it is migrated to this attribute; otherwise, the default value is "CiscoSecure-Group-Id".)

RSA Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Name	Name is always RSA
Description	Not migrated
Realm configuration file	Realm configuration file
Server TO	Server TO
Reauthenticate on change to PIN	Reauthenticate on change to PIN
RSA instance file	Not migrated
Treat rejects as authentication fail	Treat rejects as authentication fail
Treat rejects as user not found	Treat rejects as user not found
Enable identity caching	Enable identity caching
Identity caching aging time	Identity caching aging time

RSA Prompts Mapping

Cisco Secure ACS Properties	Cisco ISE Properties
Passcode prompt	Passcode prompt
Next Token prompt	Next Token prompt
PIN Type prompt	PIN Type prompt
Accept System PIN prompt	Accept System PIN prompt
Alphanumeric PIN prompt	Alphanumeric PIN prompt
Numeric PIN prompt	Numeric PIN prompt
