

Configure a Basic Policy

Configure licensing and add onto your default configuration using ASDM wizards.

- (Optional) Change the IP Address, on page 1
- Log Into ASDM, on page 2
- Configure Licensing, on page 3
- Configure the ASA with the Startup Wizard, on page 6

(Optional) Change the IP Address

By default, you can launch ASDM from the following interfaces:

- Ethernet 1/2-192.168.1.1
- Management 1/1—IP address from DHCP

If you cannot use the default IP address, you can set the IP address of the Ethernet 1/2 interface at the ASA CLI.

Procedure

Step 1 Connect to the console port and access global configuration mode. See Access the ASA CLI.

Step 2 Restore the default configuration with your chosen IP address.

configure factory-default [*ip_address* [*mask*]]

Example:

ciscoasa(config)# configure factory-default 10.1.1.151 255.255.255.0 Based on the management IP address and mask, the DHCP address pool size is reduced to 103 from the platform limit 256

WARNING: The boot system configuration will be cleared. The first image found in disk0:/ will be used to boot the system on the next reload. Verify there is a valid image on disk0:/ or the system will not boot.

Begin to apply factory-default configuration:

```
Clear all configuration

Executing command: interface ethernet1/2

Executing command: nameif inside

INFO: Security level for "inside" set to 100 by default.

Executing command: ip address 10.1.1.151 255.255.255.0

Executing command: security-level 100

Executing command: no shutdown

Executing command: exit

Executing command: http server enable

Executing command: http 10.1.1.0 255.255.255.0 management

Executing command: http 10.1.1.0 255.255.255.0 management

Executing command: dhcpd address 10.1.1.152-10.1.1.254 management

Executing command: logging asdm informational

Factory-default configuration is completed

ciscoasa(config)#
```

Step 3 Save the default configuration to flash memory.

write memory

Log Into ASDM

Launch ASDM so you can configure the ASA.

Procedure

Enter one of the following URLs in your browser. • https://192.168.1.1—Inside (Ethernet 1/2) interface IP address.						
						• https://mar
Note	Be sure to specify https://.					
	M web page appears. You may see browser security warnings because the ASA does not have a certificate in safely ignore these warnings and visit the web page.					
Click Install AS	SDM Launcher.					
Follow the onsci	reen instructions to launch ASDM.					
The Cisco ASD	The Cisco ASDM-IDM Launcher appears.					
Leave the username and password fields empty, and click OK .						

Configure Licensing

Register the firewall with the Smart Software Manager.

Before you begin

Obtain licenses for your firewall according to Obtain Licenses.

Procedure

Step 1 In the Cisco Smart Software Manager, request and copy a registration token for the virtual account to which you want to add this device.

a) Click Inventory.

Cisco Software Central > Smart Software Licensing Smart Software Licensing

b) On the General tab, click New Token.

Product Instance Registration Tokens The registration tokens below can be used to register new product instances t New Token.

Token	Expiration Date	Uses
OWFINTZiYTatY2Ew	2024-May-18 17:41:53 (in 30 days)	0 of 10

c) On the **Create Registration Token** dialog box enter the following settings, and then click **Create Token**:

Create Registration Token						
		ices, so that they can use licenses from th ducts and enter the token, to register them				
Virtual Account:						
Description:	Description					
* Expire After:	365	Days				
Max. Number of Uses:	Between 1 - 365, 30 day	rs recommended	ım uses is reached			
Allow export-controlled fur	nctionality on the products re	egistered with this token 🕧				
		(Create Token Cano	cel		

• Description

- Expire After—Cisco recommends 30 days.
- Max. Number of Uses
- Allow export-controlled functionaility on the products registered with this token—Enables the export-compliance flag.

The token is added to your inventory.

d) Click the arrow icon to the right of the token to open the **Token** dialog box so you can copy the token ID to your clipboard. Keep this token ready for later in the procedure when you need to register the ASA.

Figure 1: View Token

General Licenses		Product Instances Ever	t Log

OWFINTZIYT Ire 2: Copy 1 Öken		2024-May-18 17:41:53 (in 30 days)	U of 10		Allowed	

Step 2 In ASDM, choose **Configuration** > **Device Management** > **Licensing** > **Smart Licensing**.

Step 3 Set the licensing entitlements.

- a) Check Enable Smart license configuration.
- b) From the **Feature Tier** drop-down list, choose **Essentials**.

MjM3ZjlhYTItZGQ4OS00Yjk2LT... 2017-Aug-16

Only the Essentials tier is available.

c) (Optional) For the **Context** license, enter the number of contexts.

You can use 2 contexts without a license. The maximum number of contexts depends on your model:

• Secure Firewall 4200-100 contexts

For example, to use the maximum of 100 contexts on the Secure Firewall 4215, enter 98 for the number of contexts; this value is added to the default of 2.

- d) (Optional) Check Enable Carrier for Diameter, GTP/GPRS, SCTP inspection.
- e) Click Apply.
- f) Click the **Save** icon in the toolbar.

Step 4 Click Register.

To configure an HTTP proxy for Smart Lice	ensing using Call Home, go to <u>Smart Call-Home</u> .	If you are using Smart Transport, o

Step 5 Enter the registration token from the Cisco Smart Software Manager in the **ID Token** field.

	Smart License Registration			
ID Token:	MzV8eHpYY05EMGg2aDRYak0ybmZNVnRaSW5sbm5XVXVIZkk2RTdGTWJ6%0AZVBVWT0%3D%0A			
Force registration				
	Help Cancel Register			

ASDM refreshes the page when the license status is updated. You can also choose **Monitoring** > **Properties** > **Smart License** to check the license status, particularly if the registration fails.

Registration Status: REGISTERED							
Unregister	Renew ID Certificate	Renew Authorization					

Step 7 Quit ASDM and relaunch it.

When you change licenses, you need to relaunch ASDM to show updated screens.

Configure the ASA with the Startup Wizard

Using ASDM, you can use wizards to configure basic and advanced features. The Startup Wizard builds on the default configuration:

- inside→outside traffic flow
- Interface PAT for all traffic from inside to outside.

The Startup Wizard walks you through configuring:

- · The enable password
- Interfaces, including setting the inside and outside interface IP addresses and enabling interfaces.
- Static routes
- · The DHCP server
- And more...

Procedure

Step 1 Choose Wizards > Startup Wizard, and click the Modify existing configuration radio button.
