New and Changed Information

The following table provides an overview of the significant changes to this guide up to this current release. The table does not provide an exhaustive list of all changes made to the guide or of the new features up to this release.

Cisco APIC Release Version	Feature	Description
4.2(1)	A new avread command was added. This command provides the same information as the acidiag avread command but in a tabular format.	acidiag Command
	The <code>cluster_health</code> command was added to verify the cluster health.	<i>Verifying the Cisco APIC Cluster Using the CLI</i>
	The show discoveryissues command was added for troubleshooting switch discovery issues.	Troubleshooting Switch Discovery Issues
	This release adds an option to the Embedded Logic Analyzer Module (ELAM) tool that changes the output to a human-readable format, which enables you to find key information quickly and more efficiently. In addition, hexadecimal values have been converted to decimal values in some instances for improved readability. For backward compatibility, the existing usage of ELAM is kept intact.	Generating an ELAM Report in the Simplified Output for Fixed Form-Factor Switches Generating an ELAM Report in the Simplified Output for Modular Switches
