

## Caveats

---

Caveats describe unexpected behavior in a product. The Open Caveats section lists open caveats that apply to the current release and may apply to previous releases. A caveat that is open for a prior release and is still unresolved applies to all future releases until it is resolved.

To view the details of the software bugs pertaining to your product, perform the following task:

- Click the Caveat ID/Bug ID number in the table.

The corresponding **Bug Search Tool** window is displayed with details of the Caveat ID/Bug ID.

The Bug Search Tool (BST), which is the online successor to the Bug Toolkit, is designed to improve the effectiveness in network risk management and device troubleshooting. The BST allows partners and customers to search for software bugs based on product, release, and keyword, and aggregates key data, such as bug details, product, and version. The tool has a provision to filter bugs based on credentials to provide external and internal bug views for the search input.

To view the details of a caveat whose ID you do not have, perform the following procedure:

- 1 Access the BST using your Cisco user ID and password at:  
<https://tools.cisco.com/bugsearch/>
- 2 In the **Bug Search** window that is displayed, enter the necessary information in the corresponding fields.

For more information about how to use the Cisco Bug Search Tool effectively, including how to set email alerts for bugs and to save bugs and searches, see [Bug Search Tool Help & FAQ](#).

This chapter lists the Open and Resolved Caveats in Cisco DCNM, and contains the following section:

- [Cisco DCNM, Release 10.3\(1\), page 1](#)

## Cisco DCNM, Release 10.3(1)

### Resolved Caveats

The following table lists the Resolved bugs for Cisco DCNM, Release 10.3(1).

Caveat ID Number	Description
<a href="#">CSCvd73750</a>	Performance data is not shown for HIF interfaces.
<a href="#">CSCve06563</a>	The <b>appmgr restore all</b> command is not restoring the webUI Media Controller menus.
<a href="#">CSCve14402</a>	The voap.py script is getting replaced with the file that is there in backup file with upgrade.

## Open Caveats

The following table lists the Open bugs for Cisco DCNM, Release 10.3(1).

Caveat ID Number	Description
<a href="#">CSCvf22408</a>	Inconsistency in the display of graph and table data in the Performance Monitoring pages.
<a href="#">CSCvf35701</a>	Temperature report throws error when clicked on the email link that has csv format.
<a href="#">CSCvf39437</a>	Issue with PM collection on OVA federated upgraded setup.
<a href="#">CSCvf39678</a>	The OVA upgrade script will not terminate normally; it gets stuck on error.
<a href="#">CSCvf41732</a>	The Temperature screen times out after Endpoint Locator database clean up.
<a href="#">CSCve25345</a>	Cisco DCNM password is visible in plain text.
<a href="#">CSCvf41787</a>	VLAN reusability issue after DCNM restart.
<a href="#">CSCvf46667</a>	The Partitions drop-down options are not sorted in the Configure > LAN Fabric Auto-Configuration > Networks list screen.
<a href="#">CSCvf66656</a>	Unable to start the Endpoint Locator feature for fabric switch sending color characters
