## **Information About Port Blocking**

By default, the switch floods packets with unknown destination MAC addresses out of all ports. If unknown unicast and multicast traffic is forwarded to a protected port, there could be security issues. To prevent unknown unicast or multicast traffic from being forwarded from one port to another, you can block a port (protected or nonprotected) from flooding unknown unicast or multicast packets to other ports.

### **Blocking Flooded Traffic on an Interface**

To block flooded traffic on n interface, perform this procedure:

#### Before you begin

The interface can be a physical interface or an EtherChannel group. When you block multicast or unicast traffic for a port channel, it is blocked on all ports in the port-channel group.

#### **Procedure**

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	Enter your password if prompted.
	Device> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Device configure terminal	

	Command or Action	Purpose
Step 3	<pre>interface interface-id Example:  Device(config) # interface gigabitethernet 1/0/2  Or Device(config) # interface fastethernet 1/0/2</pre>	Specifies the interface to be configured, and enter interface configuration mode.
Step 4	<pre>switchport block multicast  Example: Device(config-if) # switchport block multicast</pre>	Blocks unknown multicast forwarding out of the port.  Note Pure Layer 2 multicast traffic as well as multicast packets that contain IPv6 information in the header are blocked.
Step 5	<pre>switchport block unicast  Example: Device(config-if) # switchport block unicast</pre>	Blocks unknown unicast forwarding out of the port.
Step 6	<pre>end Example: Device(config-line)# end</pre>	Returns to privileged EXEC mode.
Step 7	show interfaces interface-id switchport  Example:  Device# show interfaces gigabitethernet 1/0/2 switchport  Or Device# show interfaces fastethernet 1/0/2 switchport	Verifies your entries.
Step 8	<pre>show running-config Example: Device# show running-config</pre>	Verifies your entries.
Step 9	copy running-config startup-config  Example:  Device# copy running-config startup-config	(Optional) Saves your entries in the configuration file.

# **Monitoring Port Blocking**

**Table 1: Commands for Displaying Port Blocking Settings** 

Command	Purpose
show interfaces [interface-id] switchport	Displays the administrative and operational status of all switching (nonrouting) ports or the specified port, including port blocking and port protection settings.

## **Feature History for Port Blocking**

This table provides release and related information for features explained in this module.

These features are available on all releases subsequent to the one they were introduced in, unless noted otherwise.

Release	Feature	Feature Information
Cisco IOS Release 15.2(7)E1	Port Blocking	To prevent unknown unicast or multicast traffic from being forwarded from one port to another, you can block a port (protected or nonprotected) from flooding unknown unicast or multicast packets to other ports.

Use Cisco Feature Navigator to find information about platform and software image support. To access Cisco Feature Navigator, go to <a href="http://www.cisco.com/go/cfn">http://www.cisco.com/go/cfn</a>.
