Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table at the end of this module.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to http://www.cisco.com/go/cfn. An account on Cisco.com is not required.

Information About CDP

CDP Overview

CDP is a device discovery protocol that runs over Layer 2 (the data-link layer) on all Cisco-manufactured devices (routers, bridges, access servers, controllers, and switches) and allows network management applications to discover Cisco devices that are neighbors of already known devices. With CDP, network management applications can learn the device type and the Simple Network Management Protocol (SNMP) agent address of neighboring devices running lower-layer, transparent protocols. This feature enables applications to send SNMP queries to neighboring devices.

CDP runs on all media that support Subnetwork Access Protocol (SNAP). Because CDP runs over the data-link layer only, two systems that support different network-layer protocols can learn about each other.

Each CDP-configured device sends periodic messages to a multicast address, advertising at least one address at which it can receive SNMP messages. The advertisements also contain time-to-live, or holdtime information,

which is the length of time a receiving device holds CDP information before discarding it. Each device also listens to the messages sent by other devices to learn about neighboring devices.

On the switch, CDP enables Network Assistant to display a graphical view of the network. The switch uses CDP to find cluster candidates and maintain information about cluster members and other devices up to three cluster-enabled devices away from the command switch by default.

Default CDP Configuration

This table shows the default CDP configuration.

Feature	Default Setting
CDP global state	Enabled
CDP interface state	Enabled
CDP timer (packet update frequency)	60 seconds
CDP holdtime (before discarding)	180 seconds
CDP Version-2 advertisements	Enabled

How to Configure CDP

Configuring CDP Characteristics

You can configure these CDP characteristics:

- Frequency of CDP updates
- Amount of time to hold the information before discarding it
- Whether or not to send Version-2 advertisements

Note

Steps 3 through 5 are all optional and can be performed in any order.

Follow these steps to configure the CDP characteristics.

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Switch> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Switch# configure terminal	
Step 3	cdp timer seconds	(Optional) Sets the transmission frequency of CDP updates in seconds.
	Example:	The range is 5 to 254; the default is 60 seconds
	Switch(config)# cdp timer 20	The range is 5 to 254, the detault is 60 seconds
Step 4	cdp holdtime seconds	(Optional) Specifies the amount of time a
	Example:	receiving device should hold the information sent by your device before discarding it.
	Switch(config)# cdp holdtime 60	The range is 10 to 255 seconds; the default is 180 seconds.
Step 5	cdp advertise-v2	(Optional) Configures CDP to send Version-2 advertisements.
	Example:	This is the default state.
	Switch(config)# cdp advertise-v2	This is the default state.
Step 6	end	Returns to privileged EXEC mode.
	Example:	
	Switch(config)# end	
Step 7	show running-config	Verifies your entries.
	Example:	
	Switch# show running-config	
Step 8	copy running-config startup-config	(Optional) Saves your entries in the
	Example:	configuration file.
	Switch# copy running-config startup-config	

What to do next

Use the **no** form of the CDP commands to return to the default settings.

Disabling CDP

CDP is enabled by default.

Note

Switch clusters and other Cisco devices (such as Cisco IP Phones) regularly exchange CDP messages. Disabling CDP can interrupt cluster discovery and device connectivity.

Follow these steps to disable the CDP device discovery capability.

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Switch> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Switch# configure terminal	
Step 3	no cdp run	Disables CDP.
	Example:	
	Switch(config)# no cdp run	
Step 4	end	Returns to privileged EXEC mode.
	Example:	
	Switch(config)# end	
Step 5	show running-config	Verifies your entries.
	Example:	
	Switch# show running-config	

	Command or Action	Purpose
Step 6	copy running-config startup-config Example:	(Optional) Saves your entries in the configuration file.
	Switch# copy running-config startup-config	

What to do next

You must reenable CDP to use it.

Enabling CDP

CDP is enabled by default.

Note

Switch clusters and other Cisco devices (such as Cisco IP Phones) regularly exchange CDP messages. Disabling CDP can interrupt cluster discovery and device connectivity.

Follow these steps to enable CDP when it has been disabled.

Before you begin

CDP must be disabled, or it cannot be enabled.

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Switch> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Switch# configure terminal	
Step 3	cdp run	Enables CDP if it has been disabled.
	Example:	
	Switch(config)# cdp run	

	Command or Action	Purpose
Step 4	end	Returns to privileged EXEC mode.
	Example:	
	Switch(config)# end	
Step 5	show running-config	Verifies your entries.
	Example:	
	Switch# show running-config	
Step 6	copy running-config startup-config Example:	(Optional) Saves your entries in the configuration file.
	Switch# copy running-config startup-config	

What to do next

Use the **show run all** command to show that CDP has been enabled. If you enter only **show run**, the enabling of CDP may not be displayed.

Disabling Cisco Discovery Protocol on an Interface

Cisco Discovery Protocol is enabled by default on all supported interfaces to send and to receive Cisco Discovery Protocol information.

Note

Switch clusters and other Cisco devices (such as Cisco IP Phones) regularly exchange Cisco Discovery Protocol messages. Disabling Cisco Discovery Protocol can interrupt cluster discovery and device connectivity.

Note

Cisco Discovery Protocol bypass is not supported and may cause a port go into err-disabled state.

Follow these steps to disable Cisco Discovery Protocol on a port.

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.

Command or Action	Purpose
Example:	Enter your password if prompted.
Switch> enable	
configure terminal	Enters global configuration mode.
Example:	
Switch# configure terminal	
interface interface-id	Specifies the interface on which you are
Example:	disabling Cisco Discovery Protocol, and enters interface configuration mode.
Switch(config)# interface gigabitethernet 0/1	
no cdp enable	Disables Cisco Discovery Protocol on the
Example:	interface specified in Step 3.
Switch(config-if)# no cdp enable	
end	Returns to privileged EXEC mode.
Example:	
Switch(config)# end	
show running-config	Verifies your entries.
Example:	
Switch# show running-config	
copy running-config startup-config	(Optional) Saves your entries in the
Example:	configuration file.
Switch# copy running-config startup-config	
	Example: Switch> enable configure terminal Example: Switch# configure terminal interface interface-id Example: Switch(config)# interface gigabitethernet 0/1 no cdp enable Example: Switch(config-if)# no cdp enable end Example: Switch(config)# end show running-config Example: Switch# show running-config copy running-config startup-config Example: Switch# copy running-config

Monitoring and Maintaining CDP

Table 1: Commands for Displaying CDP Information

Command	Description
clear cdp counters	Resets the traffic counters to zero.
clear cdp table	Deletes the CDP table of information about neighbors.
show cdp	Displays global information, such as frequency of transmissions and the holdtime for packets being sent.
show cdp entry entry-name [version] [protocol]	Displays information about a specific neighbor.
	You can enter an asterisk (*) to display all CDP neighbors, or you can enter the name of the neighbor about which you want information.
	You can also limit the display to information about the protocols enabled on the specified neighbor or information about the version of software running on the device.
show cdp interface [interface-id]	Displays information about interfaces where CDP is enabled.
	You can limit the display to the interface about which you want information.

Command	Description
	Displays information about neighbors, including device type, interface type and number, holdtime settings, capabilities, platform, and port ID.
	You can limit the display to neighbors of a specific interface or expand the display to provide more detailed information.
show cdp traffic	Displays CDP counters, including the number of packets sent and received and checksum errors.
