

# Configuring BGP EVPN VXLANv6

This document describes new deployment and migration scenarios for implementing IPv6 in the underlay of a BGP EVPN VXLAN fabric.

- [Restrictions for BGP EVPN VXLANv6, on page 1](#)
- [Information About BGP EVPN VXLANv6, on page 1](#)
- [How to Configure BGP EVPN VXLANv6, on page 4](#)
- [Migration from VXLANv4 to VXLANv6, on page 7](#)
- [Troubleshooting BGP EVPN VXLANv6, on page 9](#)
- [Configuration Examples for BGP EVPN VXLANv6, on page 9](#)

## Restrictions for BGP EVPN VXLANv6

- Optimized Layer 2 overlay multicast is not supported in BGP EVPN VXLANv6.
- BGP EVPN VXLANv6 does not support centralized anycast gateway deployment. Only distributed anycast gateway is supported.
- BGP EVPN VXLANv6 does not support the following features:
  - Multi-Homing
  - Access Virtual Forwarding Interface (VFI)
  - Fabric Netflow

## Information About BGP EVPN VXLANv6

The ever-expanding needs of the enterprise networks to enhance the IP addressing capabilities and simplify the network configurations makes it pertinent to adopt IPv6-enabled networks. The larger IPv6 address space allows networks to scale and provide global reachability. The simplified IPv6 packet header format handles packets more efficiently. IPv6 prefix aggregation, simplified network renumbering, and IPv6 site multihoming capabilities provide an IPv6 addressing hierarchy that allows for more efficient routing. When you enable IPv6 in the underlay for VXLAN tunnel endpoints (VTEPS), the overlay traffic is encapsulated with the IPv6 VXLAN encapsulation. IPv6 connectivity between the VTEPS is established by enabling IPv6 unicast routing protocols. For overlay multi-destination traffic (BUM), when underlay multicast is used, IPv6 multicast protocol must be enabled.

For a new deployment, you can build your BGP EVPN VXLAN fabric with IPv6 underlay. For an existing BGP EVPN VXLAN fabric with IPv4 underlay, you can seamlessly migrate to an IPv6 only or dual stack underlay.

---

**Note** This feature is not supported on the Cisco Catalyst 9600 Series Supervisor 2 Module.

---

## BGP EVPN VXLANv6 Fabric Support

In Cisco IOS XE Dublin 17.10.1 and later releases, a BGP EVPN VXLAN fabric with an IPv6 underlay supports the following features:

- Ingress Replication or Static Multicast Replication
- Layer 2 Gateway
- Distributed Anycast Gateway with Symmetric Integrated Routing and Bridging
- Layer 2 External connectivity with IEEE 802.1Q network
- Layer 3 External Connectivity with VRF-Lite or MPLS Layer 3 VPN network
- Seamless migration between EVPN VXLANv4 fabric and EVPN VXLANv6 fabric
- IPv6 BGP EVPN Neighbor Peering

## EVPN VXLANv6 Layer 2 Overlay

The Layer 2 Gateway with VXLANv6 deployment supports IPv6 transport in the underlay. The VXLAN tunnels and BGP peering between Layer 2 Gateways are both IPv6 based. The overlay has only Layer 2 routes.

A Layer 2 Gateway with VXLANv6 supports Layer 2 bridging between Layer 2 Gateways. Layer 3 Routing is implemented with the external Layer 3 Gateways.

Figure 1: EVPN VXLANv6 Fabric with Layer 2 Gateway

The topology in the [Figure 1: EVPN VXLANv6 Fabric with Layer 2 Gateway](#) shows a BGP EVPN VXLAN fabric with a Layer 2 overlay that supports IPv6 underlay. The fabric supports both IPv4 and IPv6 hosts.

## EVPN VXLANv6 Overlay with Distributed Anycast Gateway

In a BGP EVPN VXLANv6 fabric with Distributed Anycast Gateway, the underlay supports IPv6 transport. The VXLAN tunnels and BGP peering, both support IPv6 addressing. The overlay has both Layer 2 and Layer 3 routes and supports MAC, IPv4 and IPv6 addressing.

Distributed Anycast Gateway with VXLANv6 supports Layer 2 bridging, Layer 3 routing within the EVPN fabric, and Layer 3 stitching through Layer 3 border gateway with IPv6 underlay. For Layer 3 routing, both IPv4 and IPv6 overlay prefixes are supported over IPv6 underlay.

Figure 2: BGP EVPN VXLANv6 Fabric with Distributed Anycast Gateway

Topology in the [Figure 2: BGP EVPN VXLANv6 Fabric with Distributed Anycast Gateway](#) shows a BGP EVPN VXLANv6 fabric with integrated routing and bridging (IRB) using distributed anycast gateway (DAG). The fabric supports both IPv4 and IPv6 hosts, and IPv6 BGP peering.

## How to Configure BGP EVPN VXLANv6

This section describes only the changes in the underlay configuration. For the overlay and complete configuration of the fabric, refer [How to Configure EVPN VXLAN Layer 2 Overlay Network](#) and [Information About EVPN VXLAN Integrated Routing and Bridging](#).

### Configure VXLANv6 for BGP EVPN Fabric with Layer 2 Overlay

Implement the following tasks to configure IPv6 underlay for a BGP EVPN VXLAN fabric with Layer 2 overlay.

#### Procedure

**Step 1** Configure an explicit router-id for L2VPN EVPN.

```
l2vpn
  router-id 1.1.1.3
l2vpn evpn
  replication-type ingress
end
```

**Step 2** Configure an L2EVPN instance.

```
l2vpn evpn instance 1 vlan-based
encapsulation vxlan
```

**Step 3** Configure Loopback interface.

```
interface Loopback1
  ipv6 address ABCD:1::2/128
  ipv6 ospf 1 area 0
```

**Step 4** Configure NVE interface.

```
interface nve1
  source-interface Loopback1
  host-reachability protocol bgp
  vxlan encapsulation ipv6
  member vni 20011 ingress-replication
  member vni 20012 mcast-group FF0E::12
```

**Step 5** Configure the VLAN.

```
vlan configuration 11
  member evpn-instance 1 vni 20011
```

**Step 6** Configure the L2VPN EVPN BGP peering.

```
interface Loopback0
  description BGP UPDATE SOURCE
  ipv6 address ABCD:1::1/128
  ipv6 ospf 1 area 0
  !
router bgp 100
  bgp router-id 1.1.1.1
  bgp log-neighbor-changes
  bgp graceful-restart
  neighbor ABCD:99::99 remote-as 100
  neighbor ABCD:99::99 update-source Loopback0
  !
  address-family l2vpn evpn
    neighbor ABCD:99::99 activate
    neighbor ABCD:99::99 send-community both
  exit-address-family
  !
```

## Configure VXLANv6 for BGP EVPN Fabric with Distributed Anycast Gateway

Implement the following tasks to configure IPv6 underlay for a BGP EVPN VXLAN fabric with a Distributed Anycast Gateway (DAG).

### Procedure

**Step 1** Configure IP-VRF.

```
vrf definition red
  rd 100:1
  !
  address-family ipv4
    route-target export 100:100
    route-target import 100:100
    route-target export 100:100 stitching
    route-target import 100:100 stitching
  exit-address-family
  !
  address-family ipv6
```

```

route-target export 100:200
  route-target import 100:200
route-target export 100:200 stitching
  route-target import 100:200 stitching
  exit-address-family
end

```

**Step 2** Configure Access SVI IRB interface.

```

interface Vlan11
mac-address 0011.0011.0011
  vrf forwarding red
  ip address 192.168.11.254 255.255.255.0
  ipv6 address 2001:11::254/64
end

```

**Step 3** Configure IPv6 BGP peering.

```

router bgp 100
  bgp router-id 1.1.1.1
  bgp log-neighbor-changes
  bgp graceful-restart
  neighbor ABCD:99::99 remote-as 100
  neighbor ABCD:99::99 update-source Loopback0
  !
  address-family l2vpn evpn
    neighbor ABCD:99::99 activate
    neighbor ABCD:99::99 send-community both
  exit-address-family
  !
  address-family ipv4 vrf red
    advertise l2vpn evpn
    redistribute connected
  exit-address-family
  address-family ipv6 vrf red
    advertise l2vpn evpn
    redistribute connected
  exit-address-family
end

```

**Step 4** Configure NVE interface.

```

interface nve1
  source-interface Loopback1
  host-reachability protocol bgp
  vxlan encapsulation ipv6
  member vni 30001 vrf red
  member vni 20011 ingress-replication
  member vni 20012 mcast-group ff0e::12

```

**Step 5** Configure the core SVI IRB interface.

```

vlan configuration 3
  member vni 30001
interface Vlan3
  vrf forwarding red
  ip unnumbered Loopback192
  ip pim sparse-mode
  ipv6 unnumbered Loopback192
  no autostate
end

```

# Migration from VXLANv4 to VXLANv6

You can seamlessly migrate your existing network from VXLANv4 to VXLANv6 underlay. To achieve a nondisruptive migration, the EVPN VXLAN network should migrate incrementally from IPv4 to IPv6 underlay. During migration, the part of the network that is migrated to IPv6 underlay remains connected with the part of the network that still works with IPv4 underlay.

The incremental migration is achieved by individually making each VTEP dual stack-capable. A dual stack VTEP node has two VTEP addresses (IPv4 and IPv6) associated with the same VXLAN Network Identifier (VNI). During the underlay migration, both these VTEP IP addresses are advertised to peers in a single BGP EVPN dual next-hop update. The receiving nodes in the underlay can choose either IPv4 or IPv6 for traffic forwarding. This ensures connectivity between the IPv4 VTEPs, the dual stack VTEPs and IPv6 VTEPs. After all the VTEPs in the fabric are made dual stack-capable, each VTEP is migrated to IPv6.

## Step 1

### 1. Configure IPv4/IPv6 Loopback interface.

```
VTEP(config)#interface Loopback1
VTEP(config-if)# ipv6 address ABCD:1::2/128
VTEP(config-if)# ipv6 ospf 1 area 0
```

### 2. Enable Dual Stack.

```
VTEP(config)# interface nve1
VTEP(config-if)# vxlan encapsulation dual-stack prefer-ipv6
```

- For unicast traffic and BUM traffic using ingress replication, the dual stack VTEP communicates with other IPv4 VTEPs using VXLANv4 and with other dual stack VTEPs using VXLANv6.

Configure static multicast replication for L2VNI.

```
VTEP(config-if)# member vni 20011 mcast-group 239.2.1.11 FF0E::11
```

### Step 2

This step is only needed for BUM traffic using Multicast Replication.

- After all the VTEPs are dual stack-capable, underlay multicast switches to IPv6 Multicast.

```
VTEP(config)# interface nve1
VTEP(config-if)# vxlan encapsulation dual-stack prefer-ipv6 underlay-mcast ipv6
```

### Step 3

- Configure all VTEPs to support only IPv6.

```
VTEP (config)# interface nve1
VTEP (config-if)# member vni 20011 mcast-group FF0E::11
VTEP (config-if)# vxlan encapsulation ipv6
```

- The fabric switches to IPv6 encapsulations.

See [Migrate EVPN VXLAN to IPv6 Underlay on Catalyst 9000 Switches](#) document for detailed steps to migrate from VXLANv4 to VXLANv6.

## Troubleshooting BGP EVPN VXLANv6

See [Troubleshoot EVPN VXLANv6 on Catalyst 9000 Series Switches](#) document to learn how to troubleshoot issues with the BGP EVPN VXLANv6 fabric.

## Configuration Examples for BGP EVPN VXLANv6

The following sections provide examples to show how to configure BGP EVPN VXLAN fabric with an IPv6 underlay and a dual stack underlay.

### Example: Configuring BGP EVPN VXLAN with IPv6 Underlay

This example shows how to configure a BGP EVPN VXLAN fabric with only IPv6 in the underlay. The following tables provide sample configuration of the VTEPs (Leaf-01, Leaf-02, Leaf-03) and the Spine nodes (Spine-01, Spine-02) in the topology [Figure 3: BGP EVPN VXLAN with IPv6 Underlay](#).

Figure 3: BGP EVPN VXLAN with IPv6 Underlay

```
BGP router identifier 172.16.255.4, local AS number 65001
BGP table version is 53, main routing table version 53
48 network entries using 18432 bytes of memory
74 path entries using 17168 bytes of memory
19/18 BGP path/bestpath attribute entries using 5624 bytes of memory
4 BGP rrinfo entries using 160 bytes of memory
15 BGP extended community entries using 784 bytes of memory
0 BGP route-map cache entries using 0 bytes of memory
0 BGP filter-list cache entries using 0 bytes of memory
BGP using 42168 total bytes of memory
BGP activity 62/2 prefixes, 113/19 paths, scan interval 60 secs
48 networks peaked at 16:39:55 Oct 31 2022 UTC (00:01:46.413 ago)

## Example: Configuring BGP EVPN VXLAN with Dual Stack Underlay

This example shows how to configure a BGP EVPN VXLAN fabric with a dual stack (both IPv4 and IPv6) underlay. The following tables provide sample configuration of the VTEPs (Leaf-01, Leaf-02, Leaf-03) and the Spine nodes (Spine-01, Spine-02) in the topology [Figure 4: BGP EVPN VXLAN with a Dual Stack Underlay](#).

## Verifying BGP EVPN VXLAN with Dual Stack Underlay Configuration

The following sections provide sample output of **show** commands to verify the BGP EVPN VXLAN configuration with dual stack underlay.

- [Outputs to Verify Configuration on VTEP 1, on page 56](#)
- [Outputs to Verify Configuration on VTEP 2, on page 61](#)
- [Outputs to Verify Configuration on VTEP 3, on page 69](#)
- [Outputs to Verify Configuration on Spine 1, on page 76](#)
- [Outputs to Verify the Configuration on Spine 2, on page 82](#)

### Outputs to Verify Configuration on VTEP 1

```
Leaf-01# show ip route
Codes: L - local, C - connected, S - static, R - RIP, M - mobile, B - BGP
       D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
       N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
       E1 - OSPF external type 1, E2 - OSPF external type 2, m - OMP
       n - NAT, Ni - NAT inside, No - NAT outside, Nd - NAT DIA
       i - IS-IS, su - IS-IS summary, L1 - IS-IS level-1, L2 - IS-IS level-2
       ia - IS-IS inter area, * - candidate default, U - per-user static route
       H - NHRP, G - NHRP registered, g - NHRP registration summary
       o - ODR, P - periodic downloaded static route, l - LISP
       a - application route
       + - replicated route, % - next hop override, p - overrides from PFR
       & - replicated local route overrides by connected

Gateway of last resort is not set

    172.16.0.0/16 is variably subnetted, 19 subnets, 2 masks
C       172.16.13.0/24 is directly connected, GigabitEthernet1/0/1
L       172.16.13.3/32 is directly connected, GigabitEthernet1/0/1
O       172.16.14.0/24
        [110/2] via 172.16.13.1, 02:27:03, GigabitEthernet1/0/1
O       172.16.15.0/24
        [110/2] via 172.16.13.1, 02:27:03, GigabitEthernet1/0/1
C       172.16.23.0/24 is directly connected, GigabitEthernet1/0/2
L       172.16.23.3/32 is directly connected, GigabitEthernet1/0/2
O       172.16.24.0/24

IP Multicast Routing Table

Flags: D - Dense, S - Sparse, B - Bidir Group, s - SSM Group, C - Connected,

L - Local, P - Pruned, R - RP-bit set, F - Register flag,

T - SPT-bit set, J - Join SPT, M - MSDP created entry, E - Extranet,

X - Proxy Join Timer Running, A - Candidate for MSDP Advertisement,

U - URD, I - Received Source Specific Host Report,

Z - Multicast Tunnel, z - MDT-data group sender,

Y - Joined MDT-data group, y - Sending to MDT-data group,

G - Received BGP C-Mroute, g - Sent BGP C-Mroute,

N - Received BGP Shared-Tree Prune, n - BGP C-Mroute suppressed,

Q - Received BGP S-A Route, q - Sent BGP S-A Route,

V - RD & Vector, v - Vector, p - PIM Joins on route,

x - VxLAN group, c - PFP-SA cache created entry,

\* - determined by Assert, # - iif-starg configured on rpf intf,

e - encap-helper tunnel flag, l - LISP decap ref count contributor

Outgoing interface flags: H - Hardware switched, A - Assert winner, p - PIM Join

t - LISP transit group

Leaf-03# show bgp l2vpn evpn summary
BGP router identifier 172.16.255.5, local AS number 65001
BGP table version is 56, main routing table version 56
51 network entries using 19584 bytes of memory
78 path entries using 18096 bytes of memory
23/22 BGP path/bestpath attribute entries using 6808 bytes of memory
4 BGP rrinfo entries using 160 bytes of memory
17 BGP extended community entries using 904 bytes of memory
0 BGP route-map cache entries using 0 bytes of memory
0 BGP filter-list cache entries using 0 bytes of memory
BGP using 45552 total bytes of memory
BGP activity 64/0 prefixes, 105/6 paths, scan interval 60 secs
51 networks peaked at 15:31:23 Oct 31 2022 UTC (00:03:59.747 ago)

Spine-01# **show ip msdp peer**

MSDP Peer 172.16.254.2 (?), AS 65001 (configured AS)

Connection status:

State: Up, Resets: 0, Connection source: Loopback1 (172.16.254.1)

Uptime(Downtime): 03:11:04, Messages sent/received: 249/260

Output messages discarded: 0

Connection and counters cleared 03:12:04 ago

SA Filtering:

Input (S,G) filter: none, route-map: none

Input RP filter: none, route-map: none

Output (S,G) filter: none, route-map: none

Output RP filter: none, route-map: none

SA-Requests:

Input filter: none

Peer ttl threshold: 0

SAs learned from this peer: 3

Number of connection transitions to Established state: 1

Input queue size: 0, Output queue size: 0

MD5 signature protection on MSDP TCP connection: not enabled

Message counters:

RPF Failure count: 0

SA Messages in/out: 249/156

SA Requests in: 0

SA Responses out: 0

Data Packets in/out: 36/43

```

```

BGP router identifier 172.16.255.2, local AS number 65001
BGP table version is 33, main routing table version 33
32 network entries using 12288 bytes of memory
85 path entries using 19720 bytes of memory
24/22 BGP path/bestpath attribute entries using 7104 bytes of memory
3 BGP rrinfo entries using 120 bytes of memory
17 BGP extended community entries using 920 bytes of memory
0 BGP route-map cache entries using 0 bytes of memory
0 BGP filter-list cache entries using 0 bytes of memory
BGP using 40152 total bytes of memory
BGP activity 32/0 prefixes, 85/0 paths, scan interval 60 secs
32 networks peaked at 15:31:23 Oct 31 2022 UTC (00:45:53.775 ago)
