Restrictions for System MTU

On Cisco Catalyst 9600 Series Supervisor 2 Module (C9600X-SUP-2), the following restrictions are applicable:

- If no protocol-specific MTU configuration is present, Per-Port MTU is used as protocol-specific MTU. In case Per-Port MTU is not configured, System MTU is used as protocol-specific MTU.
- Ingress and egress Layer 2 MTU is derived from Per-Port MTU. If Per-Port MTU is not configured, System MTU is used
- On ingress ports configured with Layer 2 MTU, if packets exceed the configured MTU size, then the packets are dropped.
- Layer 2 MTU configurations are not enforced for egress frames.

Information About the MTU

The default maximum transmission unit (MTU) size for payload received in Ethernet frame and sent on all device interfaces is 1500 bytes. The maximum value of System MTU for Catalyst is 9216 bytes.

System MTU Value Application

The upper limit of the IP or IPv6 MTU value is based on the switch configuration and refers to the currently applied system MTU value. For more information about setting the MTU sizes, see the **system mtu** global configuration command in the command reference for this release.

Beginning from Cisco IOS XE Amsterdam 17.3.x, the minimum IPv6 system MTU is fixed at 1280 as per RFC 8200.

How to Configure MTU

Configuring the System MTU

Follow these steps to change the MTU size for switched packets:

Procedure

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Device> enable	
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 3	system mtu bytes	(Optional) Changes the MTU size for all
	Example:	interfaces.
	Device(config)# system mtu 1900	
Step 4	end	Returns to privileged EXEC mode.
	Example:	
	Device(config)# end	
Step 5	copy running-config startup-config	Saves your entries in the configuration file.
	Example:	
	Device# copy running-config startup-config	
Step 6	show system mtu	Verifies your settings.
	Example:	
	Device# show system mtu	

Configuring Protocol-Specific MTU

To override system MTU values on routed interfaces, configure protocol-specific MTU under each routed interface. To change the MTU size for routed ports, perform this procedure

Procedure

	Command or Action	Purpose
Step 1	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 2	interface interface	Enters interface configuration mode.
	Example:	
	<pre>Device(config) # interface gigabitethernet0/0</pre>	
Step 3	ip mtu bytes	Changes the IPv4 MTU size
	Example:	
	Device(config-if)# ip mtu 68	
Step 4	ipv6 mtu bytes	(Optional) Changes the IPv6 MTU size.
	Example:	
	Device(config-if)# ipv6 mtu 1280	
Step 5	end	Returns to privileged EXEC mode.
	Example:	
	Device(config-if)# end	
Step 6	copy running-config startup-config	Saves your entries in the configuration file.
	Example:	
	Device# copy running-config startup-config	
Step 7	show system mtu	Verifies your settings.
	Example:	
	Device# show system mtu	

Configuration Examples for System MTU

Example: Configuring Protocol-Specific MTU

Device# configure terminal
Device(config)# interface gigabitethernet 0/1
Device(config-if)# ip mtu 900
Device(config-if)# ipv6 mtu 1286
Device(config-if)# end

Example: Configuring the System MTU

Device# configure terminal
Device(config)# system mtu 1600
Device(config)# exit

Feature History for System MTU

This table provides release and related information for features explained in this module.

These features are available on all releases subsequent to the one they were introduced in, unless noted otherwise.

Release	Feature	Feature Information
Cisco IOS XE Gibraltar 16.11.1	System MTU	System MTU defines the maximum transmission unit size for frames transmitted on all interfaces of a switch.

Use Cisco Feature Navigator to find information about platform and software image support. To access Cisco Feature Navigator, go to http://www.cisco.com/go/cfn.
