Information About Graceful Shutdown for OSPFv3

The Graceful Shutdown for OSPFv3 feature provides the ability to temporarily shut down the OSPFv3 protocol in the least disruptive manner and to notify its neighbors that it is going away. All traffic that has another path through the network will be directed to that alternate path. A graceful shutdown of the OSPFv3 protocol can be initiated using the **shutdown** command in router configuration mode or in address family configuration mode.

This feature also provides the ability to shut down OSPFv3 on a specific interface. In this case, OSPFv3 will not advertise the interface or form adjacencies over it; however, all of the OSPFv3 interface configuration will be retained. To initiate a graceful shutdown of an interface, use the **ipv6 ospf shutdown** or the **ospfv3 shutdown** command in interface configuration mode.

How to Configure Graceful Shutdown Support for OSPFv3

Configuring Graceful Shutdown of the OSPFv3 Process

Procedure

	Command or Action	Purpose
Step 1 enable		Enables privileged EXEC mode.
	Example:	Enter your password if prompted.
	Device> enable	

	Command or Action	Purpose	
Step 2	configure terminal	Enters global configuration mode.	
	Example:		
	Device#configure terminal		
Step 3	Do one of the following:	Enables OSPFv3 routing and enters router	
	• ipv6 router ospf process-id	configuration mode.	
	• router ospfv3 process-id		
	Example:		
	Device(config)#ipv6 router ospf 1		
	Example:		
	Device(config) #router ospfv3 101		
Step 4	shutdown	Shuts down the selected interface.	
	Example:		
	Device(config-router)#shutdown		
Step 5	end	Returns to privileged EXEC mode.	
	Example:		
	Device(config-router)#end		
Step 6	Do one of the following:	(Optional) Displays general information about	
	• show ipv6 ospf [process-id]	OSPFv3 routing processes.	
	• show ospfv3 [process-id]		
	Example:		
	Device#show ipv6 ospf		
	Example:		
	Device#show ospfv3		

Configuring Graceful Shutdown of the OSPFv3 Process in Address-Family Configuration Mode

Procedure

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	Enter your password if prompted.
	Device> enable	

	Command or Action	Purpose	
Step 2	configure terminal	Enters global configuration mode.	
	Example:		
	Device#configure terminal		
Step 3	router ospfv3 [process-id]	Enables router configuration mode for the IPv6 address family.	
	Example:		
	Device(config) #router ospfv3 1		
Step 4	address-family ipv6 unicast [vrf vrf-name]	Enters IPv6 address family configuration mode	
	Example:	for OSPFv3.	
	Device(config-router)#address-family ipv6	5	
Step 5	shutdown	Shuts down the selected interface.	
	Example:		
	Device(config-router-af)#shutdown		
Step 6	end	Returns to privileged EXEC mode.	
	Example:		
	Device(config-router-af)#end		
Step 7	show ospfv3 [process-id]	(Optional) Displays general information about OSPFv3 routing processes.	
	Example:		
	Device#show ospfv3		

Configuration Examples for Graceful Shutdown Support for OSPFv3

The following sections provide the various configuration examples for graceful shutdown support for OSPFv3.

Example: Configuring Graceful Shutdown of the OSPFv3 Process

The following example shows how to configure graceful shutdown of the OSPFv3 process in IPv6 router OSPF configuration mode configuration mode:

```
ipv6 router ospf 6
 router-id 10.10.10.10
 shutdown
```

The following example shows how to configure graceful shutdown of the OSPFv3 process in router OSPFv3 configuration mode:

```
!
router ospfv3 1
shutdown
!
address-family ipv6 unicast
exit-address-family
```

The following example shows how to configure graceful shutdown of the OSPFv3 process in address-family configuration mode:

```
!
router ospfv3 1
!
address-family ipv6 unicast
shutdown
exit-address-family
```

Example: Configuring Graceful Shutdown of the OSPFv3 Interface

The following example shows how to configure graceful shutdown of the OSPFv3 interface using the **ipv6** ospf shutdown command:

```
!
interface Serial2/1
no ip address
ipv6 enable
ipv6 ospf 6 area 0
ipv6 ospf shutdown
serial restart-delay 0
```

The following example shows how to configure graceful shutdown of the OSPFv3 interface using the **ospfv3 shutdown** command:

```
!
interface Serial2/0
ip address 10.10.10.10 255.255.255.0
ip ospf 1 area 0
ipv6 enable
ospfv3 shutdown
ospfv3 1 ipv6 area 0
serial restart-delay 0
```

Feature History for Graceful Shutdown Support for OSPFv3

This table provides release and related information for the features explained in this module.

These features are available in all the releases subsequent to the one they were introduced in, unless noted otherwise.

Release	Feature	Feature Information
Cisco IOS XE Gibraltar 16.11.1	Graceful Shutdown Support for OSPFv3	Graceful Shutdown Support for OSPFv3 feature provides the ability to temporarily shut down an Open Shortest Path First version 3 (OSPFv3) process or interface in the least disruptive manner, and to notify its neighbors that it is going away
Cisco IOS XE Cupertino 17.7.1	Graceful Shutdown Support for OSPFv3	Support for this feature was introduced on the Cisco Catalyst 9600 Series Supervisor 2 Module (C9600X-SUP-2).

Use the Cisco Feature Navigator to find information about platform and software image support. To access Cisco Feature Navigator, go to http://www.cisco.com/go/cfn.
