Configuring Auto-QoS

Prerequisites for Auto-QoS

The prerequisites for auto-QoS are the same as the prerequisites for standard QoS.

Restrictions for Auto-QoS

The following are restrictions for auto-QoS:

- Auto-qos is not supported on SVI interfaces.

- Do not configure the **auto qos voip cisco-phone** option for IP phones that support video. This option causes DSCP markings of video packets to get overwritten, because these packets do not have Expedited Forwarding priority, which results in these packets getting classified in the class-default class.

Note This restriction does not apply to the Cisco Catalyst 9600 Series Supervisor 2 Module (C9600-SUP-2).

- Auto-QoS does not generate configuration when it is pushed from the startup-configuration using the **auto qos voip cisco-phone** command to the running-configuration. This is expected behavior and this is to prevent overwriting of user-created customized QoS policies by the default configuration, if any, every time the command **auto qos voip cisco-phone** is pushed from the startup-config.

You can use any of the following workarounds for this limitation:

- Configure the **auto qos voip cisco-phone** command manually on the switch interfaces.

- For new switches, if you push auto-QoS commands through startup-config, the command should include each of the following as part of the standard template

   1. Interface-level:

      - **trust device cisco-phone**

      - **auto qos voip cisco-phone**

      - **service-policy input** AutoQos-4.0-CiscoPhone-Input-Policy

      - **service-policy output** AutoQos-4.0-Output-Policy

   2. Global-level:

      - Class-map

      - Policy-map

      - ACL(ACE)

- If the **auto qos voip cisco-phone** command is already configured on an interface but policies are not being generated, disable the command from all the interfaces and reconfigure the command on each interface manually.

Information About Configuring Auto-QoS

Auto-QoS Overview

You can use the auto-QoS feature to simplify the deployment of QoS features. Auto-QoS determines the network design and enables QoS configurations so that the switch can prioritize different traffic flows.

The switch employs the MQC model. This means that instead of using certain global configurations, auto-QoS applied to any interface on a switch configures several global class maps and policy maps.

Auto-QoS matches traffic and assigns each matched packet to qos-groups. This allows the output policy map to put specific qos-groups into specific queues, including into the priority queue.

Note On the Cisco Catalyst 9600 Series Supervisor 2 Module (C9600-SUP-2), the egress queuing policy only maps traffic-class to queues. For ingress policy, traffic-class has to be set specifically, otherwise the default mapping will use only traffic-class 0 or 7.

QoS is needed in both directions, both on inbound and outbound. When inbound, the switch port needs to trust the DSCP in the packet (done by default). When outbound, the switch port needs to give voice packets "front of line" priority. If voice is delayed too long by waiting behind other packets in the outbound queue, the end host drops the packet because it arrives outside of the receive window for that packet.

> **Note**
>
> On the Cisco Catalyst 9600 Series Supervisor 2 Module (C9600-SUP-2), DSCP is trusted by default for routed packets, and CoS is trusted by default for bridged packets.

Auto-QoS Compact Overview

When you enter an auto-QoS command, the switch displays all the generated commands as if the commands were entered from the CLI. You can use the auto-QoS compact feature to hide the auto-QoS generated commands from the running configuration. This would make it easier to comprehend the running-configuration and also help to increase efficient usage of memory.

Auto-QoS Global Configuration Templates

In general, an auto-QoS command generates a series of class maps that either match on ACLs or on DSCP and/or CoS values to differentiate traffic into application classes. An input policy is also generated, which matches the generated classes and in some cases, polices the classes to a set bandwidth. Eight egress-queue class maps are generated. The actual egress output policy assigns a queue to each one of these eight egress-queue class maps.

The auto-QoS commands only generate templates as needed. For example, the first time any new auto-QoS command is used, global configurations that define the eight queue egress service-policy are generated. From this point on, auto-QoS commands applied to other interfaces do not generate templates for egress queuing because all auto-QoS commands rely on the same eight queue models, which have already been generated from the first time a new auto-QoS command was used.

Auto-QoS Policy and Class Maps

After entering the appropriate auto-QoS command, the following actions occur:

- Specific class maps are created.

- Specific policy maps (input and output) are created.

- Policy maps are attached to the specified interface.

- Trust level for the interface is configured.

> **Note**
>
> On the Cisco Catalyst 9600 Series Supervisor 2 Module (C9600-SUP-2), DSCP is trusted by default for routed packets, and CoS is trusted by default for bridged packets.

Effects of Auto-QoS on Running Configuration

When auto-QoS is enabled, the **auto qos** interface configuration commands and the generated global configuration are added to the running configuration.

The switch applies the auto-QoS-generated commands as if the commands were entered from the CLI. An existing user configuration can cause the application of the generated commands to fail or to be overridden by the generated commands. These actions may occur without warning. If all the generated commands are successfully applied, any user-entered configuration that was not overridden remains in the running configuration. Any user-entered configuration that was overridden can be retrieved by reloading the switch without saving the current configuration to memory. If the generated commands are not applied, the previous running configuration is restored.

Effects of Auto-Qos Compact on Running Configuration

If auto-QoS compact is enabled:

- Only the auto-QoS commands entered from the CLI are displayed in running-config.

- The generated global and interface configurations are hidden.

- When you save the configuration, only the auto-qos commands you have entered are saved (and not the hidden configuration).

- When you reload the switch, the system detects and re-executes the saved auto-QoS commands and the AutoQoS SRND4.0 compliant config-set is generated.

Note   Do not make changes to the auto-QoS-generated commands when auto-QoS compact is enabled, because user-modifications are overridden when the switch reloads.

When auto-qos global compact is enabled:

- **show derived-config** command can be used to view hidden Auto-QoS global Compact derived commands.

- Auto-QoS global Compact commands will not be stored to memory. They will be regenerated every time the switch is reloaded.

- When compaction is enabled, auto-qos generated commands should not be modified.

- If the interface is configured with auto-QoS and if Auto-QoS global Compact needs to be disabled, auto-QoS should be disabled at interface level first.

How to configure Auto-QoS

Configuring Auto-QoS

For optimum QoS performance, configure auto-QoS on all the devices in your network.

Procedure

	Command or Action	**Purpose**
Step 1	**configure terminal** **Example:** Device# **configure terminal**	Enters global configuration mode.
Step 2	**interface** *interface-id* **Example:** Device(config)# **interface HundredGigE 1/0/1**	Specifies the port that is connected to a VoIP port, video device, or the uplink port that is connected to another trusted switch or router in the network interior, and enters the interface configuration mode.
Step 3	Depending on your auto-QoS configuration, use one of the following commands: • **auto qos voip** {**cisco-phone** | **cisco-softphone** | **trust**} • **auto qos video** {**cts** | **ip-camera** | **media-player**} • **auto qos classify** [**police**] • **auto qos trust** {**cos** | **dscp**} **Example:** Device(config-if)# **auto qos trust dscp**	The following commands enable auto-QoS for VoIP: • **auto qos voip cisco-phone**: If the port is connected to a Cisco IP Phone, the QoS labels of incoming packets are only trusted (conditional trust through CDP) when the telephone is detected. **Note** Do not configure the **auto qos voip cisco-phone** option for IP phones that support video. This option causes DSCP markings of video packets to get overwritten, because these packets do not have Expedited Forwarding priority, which results in these packets getting classified in the class-default class. • **auto qos voip cisco-softphone**: The port is connected to device running the Cisco SoftPhone feature. This command generates a QoS configuration for interfaces connected to PCs running the Cisco IP SoftPhone application and mark, as well as police traffic coming from such interfaces. Ports configured with this command are considered untrusted. • **auto qos voip trust**: The uplink port is connected to a trusted switch or router, and the VoIP traffic classification in the ingress packet is trusted.

	Command or Action	Purpose
		The following commands enable auto-QoS for the specified video device (system, camera, or media player):
		• **auto qos video cts**: A port connected to a Cisco Telepresence system. QoS labels of incoming packets are only trusted (conditional trust through CDP) when a Cisco TelePresence is detected.
		• **auto qos video ip-camera**: A port connected to a Cisco video surveillance camera. QoS labels of incoming packets are only trusted (conditional trust through CDP) when a Cisco camera is detected.
		• **auto qos video media-player**: A port connected to a CDP-capable Cisco digital media player. QoS labels of incoming packets are only trusted (conditional trust through CDP) when a digital media player is detected.
		The following command enables auto-QoS for classification:
		• **auto qos classify police**: This command generates a QoS configuration for untrusted interfaces. The configuration places a service-policy on the interface to classify traffic coming from untrusted desktops/devices and mark them accordingly. The service-policies generated do police.
		The following commands enable auto-QoS for trusted interfaces:
		• **auto qos trust cos**: Class of service.
		• **auto qos trust dscp**: Differentiated Services Code Point.
Step 4	**end** **Example:** Device(config-if)# **end**	Returns to privileged EXEC mode.
Step 5	**show auto qos interface** *interface-id* **Example:**	(Optional) Displays the auto-QoS command on the interface on which auto-QoS was enabled. Use the **show running-config** command to

Command or Action	Purpose
Device# **show auto qos interface HundredGigE 1/0/1**	display the auto-QoS configuration and user modifications.

Upgrading Auto-QoS

Before you begin

Prior to upgrading, you need to remove all auto-QoS configurations currently on the switch. This sample procedure describes that process.

After following this sample procedure, you must then reboot the switch with the new or upgraded software image and reconfigure auto-QoS.

Procedure

Step 1 **show auto qos**

Example:

```
Device# show auto qos

TwentyFiveGigE1/0/1
auto qos trust dscp

TwentyFiveGigE1/0/2
auto qos trust cos
```

Example:

On the Cisco Catalyst 9600 Series Supervisor 2 Module (C9600X-SUP-2):

```
Device# show auto qos

TwentyFiveGigE1/0/1
auto qos trust dscp

TwentyFiveGigE1/0/2
auto qos trust cos
```

In privileged EXEC mode, record all current auto QoS configurations by entering this command.

Step 2 **no auto qos**

Example:

```
Device(config-if)#no auto qos
```

In interface configuration mode, run the appropriate **no auto qos** command on each interface that has an auto QoS configuration.

Step 3 **show running-config | i autoQos**

Example:

```
Device# show running-config | i autoQos
```

Return to privileged EXEC mode, and record any remaining auto QoS maps class maps, policy maps, access lists, table maps, or other configurations by entering this command.

Step 4 **no policy-map** *policy-map_name*

Example:

```
Device(config)# no policy-map pmap_101
Device(config)# no class-map cmap_101
Device(config)# no ip access-list extended AutoQos-101
Device(config)# no table-map 101
Device(config)# no table-map policed-dscp
```

In global configuration mode, remove the QoS class maps, policy maps, access-lists, table maps, and any other auto QoS configurations by entering these commands:

- **no policy-map** *policy-map-name*

- **no class-map** *class-map-name*

- **no ip access-list extended** *Auto-QoS-x*

- **no table-map** *table-map-name*

- **no table-map policed-dscp**

Step 5 **show running-config | i autoQos**

Example:

```
Device#show running-config | i autoQos
```

Return to privileged EXEC mode, run this command again to ensure that no auto-QoS configuration or remaining parts of the auto-QoS configuration exists

Step 6 **show auto qos**

Example:

```
Device# show auto qos
```

Run this command to ensure that no auto-QoS configuration or remaining parts of the configuration exists.

Step 7 **write memory**

Example:

```
Device# write memory
```

Write the changes to the auto QoS configuration to NV memory by entering the **write memory** command.

What to do next

Reboot the switch with the new or upgraded software image.

After rebooting with the new or upgraded software image, re-configure auto-QoS for the appropriate switch interfaces as determined by running the **show auto qos** command described in step 1.

| **Note** | There is only one table-map for exceed and another table-map for violate markdown per switch or stack. If the switch already has a table-map under the exceed action, then the auto-qos policy cannot be applied. |

Enabling Auto-Qos Compact

To enable auto-QoS compact, enter this command:

Procedure

	Command or Action	**Purpose**
Step 1	**configure terminal** **Example:** Device# **configure terminal**	Enters global configuration mode.

Step 2	**auto qos global compact**
	Example:
	
	Device(config)# **auto qos global compact**
		Enables auto-Qos compact and generates (hidden) the global configurations for auto-QoS.
		
		You can then enter the auto-QoS command you want to configure in the interface configuration mode and the interface commands that the system generates are also hidden.
		
		To display the auto-QoS configuration that has been applied, use these the privileged EXEC commands:
		
		    • **show derived-config**
		
		    • **show policy-map**
		
		    • **show access-list**
		
		    • **show class-map**
		
		    • **show table-map**
		
		    • **show auto qos**
		
		    • **show policy-map interface**
		
		    • **show ip access-lists**

Command or Action	Purpose
	• **show policy-map type queue**
	• **show policy-map type queueing interface**
	Note The **show policy-map type queueing interface** command is only applicable to the Cisco Catalyst 9600 Series Supervisor 2 Module (C9600-SUP-2).
	These commands will have keyword **"AutoQos-"**.

What to do next

To disable auto-QoS compact, remove auto-Qos instances from all interfaces by entering the **no** form of the corresponding auto-QoS commands and then enter the **no auto qos global compact** global configuration command.

Monitoring Auto-QoS

Table 1: Commands for Monitoring Auto-QoS

Command	Description
show auto qos [**interface** [*interface-id*]]	Displays the initial auto-QoS configuration. You can compare the **show auto qos** and the **show running-config** command output to identify the user-defined QoS settings.
show running-config	Displays information about the QoS configuration that might be affected by auto-QoS. You can compare the **show auto qos** and the **show running-config** command output to identify the user-defined QoS settings.
show derived-config	Displays the hidden **mls qos** command which get configured along with the running configs because of auto-qos template.

Troubleshooting Auto-QoS

To troubleshoot auto-QoS, use the **debug auto qos** privileged EXEC command. For more information, see the **debug auto qos** command in the command reference for this release.

To disable auto-QoS on a port, use the **no** form of the **auto qos** command interface configuration command, such as **no auto qos voip**. Only the auto-QoS-generated interface configuration commands for this port are removed. If this is the last port on which auto-QoS is enabled and you enter the **no auto qos voip** command, auto-QoS is considered disabled even though the auto-QoS-generated global configuration commands remain (to avoid disrupting traffic on other ports affected by the global configuration).

Configuration Examples for Auto-QoS

Example: auto qos trust cos

The following is an example of the **auto qos trust cos** command and the applied policies and class maps.

The following policy maps are created and applied when running this command:

- AutoQos-4.0-Trust-Cos-Input-Policy
- AutoQos-4.0-Output-Policy

The following class maps are created and applied when running this command:

- class-default (match-any)
- AutoQos-4.0-Output-Priority-Queue (match-any)
- AutoQos-4.0-Output-Control-Mgmt-Queue (match-any)
- AutoQos-4.0-Output-Multimedia-Conf-Queue (match-any)
- AutoQos-4.0-Output-Trans-Data-Queue (match-any)
- AutoQos-4.0-Output-Bulk-Data-Queue (match-any)
- AutoQos-4.0-Output-Scavenger-Queue (match-any)
- AutoQos-4.0-Output-Multimedia-Strm-Queue (match-any)

Additionally, on the Cisco Catalyst 9600 Series Supervisor 2 Module (C9600-SUP-2), the following class maps are created and applied when running this command:

- AutoQos-4.0-Output-Priority-Queue (match-any)
- AutoQos-4.0-Output-Signaling-Queue (match-any)
- AutoQos-4.0-Output-Multimedia-Conf-Queue (match-any)
- AutoQos-4.0-Output-Transaction-Data-Queue (match-any)
- AutoQos-4.0-Output-Bulk-Data-Queue (match-any)
- AutoQos-4.0-Output-Scavenger-Queue (match-any)
- AutoQos-4.0-Output-Multimedia-Stream-Queue (match-any)
- class-default (match-any)

The following sample output does not apply to the Cisco Catalyst 9600 Series Supervisor 2 Module (C9600X-SUP- 2).

```
Device(config)# interface HundredGigE1/0/2
Device(config-if)# auto qos trust cos
Device(config-if)# end
Device# show policy-map interface HundredGigE1/0/2

```

Example: auto qos trust dscp

The following is an example of the **auto qos trust dscp** command and the applied policies and class maps.

The following policy maps are created and applied when running this command:

- AutoQos-4.0-Trust-Dscp-Input-Policy
- AutoQos-4.0-Output-Policy

The following class maps are created and applied when running this command:

- class-default (match-any)
- AutoQos-4.0-Output-Priority-Queue (match-any)
- AutoQos-4.0-Output-Control-Mgmt-Queue (match-any)
- AutoQos-4.0-Output-Multimedia-Conf-Queue (match-any)
- AutoQos-4.0-Output-Trans-Data-Queue (match-any)
- AutoQos-4.0-Output-Bulk-Data-Queue (match-any)
- AutoQos-4.0-Output-Scavenger-Queue (match-any)
- AutoQos-4.0-Output-Multimedia-Strm-Queue (match-any)

Additionally, on the Cisco Catalyst 9600 Series Supervisor 2 Module (C9600X-SUP- 2), the following class maps are created and applied when running this command:

- AutoQos-4.0-Trust-Dscp-Priority-Class1 (match-any)
- AutoQos-4.0-Trust-Dscp-Priority-Class2 (match-any)
- AutoQos-4.0-Trust-Dscp-Signaling-Class1 (match-any)
- AutoQos-4.0-Trust-Dscp-Signaling-Class2 (match-any)
- AutoQos-4.0-Trust-Dscp-Multimedia-Conf-Class1 (match-any)
- AutoQos-4.0-Trust-Dscp-Multimedia-Conf-Class2 (match-any)
- AutoQos-4.0-Trust-Dscp-Transaction-Data-Class1 (match-any)
- AutoQos-4.0-Trust-Dscp-Transaction-Data-Class2 (match-any)
- AutoQos-4.0-Trust-Dscp-Bulk-Data-Class1 (match-any)
- AutoQos-4.0-Trust-Dscp-Bulk-Data-Class2 (match-any)
- AutoQos-4.0-Trust-Dscp-Scavenger-Class (match-any)
- AutoQos-4.0-Trust-Dscp-Multimedia-Stream-Class1 (match-any)
- AutoQos-4.0-Trust-Dscp-Multimedia-Stream-Class2 (match-any)

The following sample output does not apply to the Cisco Catalyst 9600 Series Supervisor 2 Module (C9600X-SUP- 2).

```
Device(config)# interface HundredGigE1/0/2
Device(config-if)# auto qos trust dscp
Device(config-if)# end
Device#show policy-map interface HundredGigE1/0/2
```

```

Example: auto qos video media-player

Note This example section is not applicable to the Cisco Catalyst 9600 Series Supervisor 2 Module (C9600X-SUP-2).

The following is an example of the **auto qos video media-player** command and the applied policies and class maps.

The following policy maps are created and applied when running this command:

- AutoQos-4.0-Trust-Dscp-Input-Policy
- AutoQos-4.0-Output-Policy

The following class maps are created and applied when running this command:

- class-default (match-any)
- AutoQos-4.0-Output-Priority-Queue (match-any)
- AutoQos-4.0-Output-Control-Mgmt-Queue (match-any)
- AutoQos-4.0-Output-Multimedia-Conf-Queue (match-any)
- AutoQos-4.0-Output-Trans-Data-Queue (match-any)
- AutoQos-4.0-Output-Bulk-Data-Queue (match-any)
- AutoQos-4.0-Output-Scavenger-Queue (match-any)

- AutoQos-4.0-Output-Multimedia-Strm-Queue (match-any)

```
Device(config)# interface HundredGigabitE1/0/2
Device(config-if)# auto qos video media-player
Device(config-if)# end
Device# show policy-map interface HundredGigabitE1/0/2

HundredGigabitE1/0/2

Example: auto qos global compact

The following is an example of the **auto qos global compact** command. This example is not applicable to the Cisco Catalyst 9600 Series Supervisor 2 Module (C9600X-SUP- 2).

```
Device# configure terminal
Device(config)# auto qos global compact
Device(config)# interface HundredGigE1/0/2
Device(config-if)# auto qos voip cisco-phone

Device# show auto qos
HundredGigE1/0/2
auto qos voip cisco-phone

Device# show running-config interface HundredGigE1/0/2
interface HundredGigE1/0/2
auto qos voip cisco-phone
end
```

The following is an example of the **auto qos global compact** command from the Cisco Catalyst 9600 Series Supervisor 2 Module (C9600X-SUP-2).

```
Device# configure terminal
Device(config)# auto qos global compact
Device(config)# interface HundredGigE1/0/2
Device(config-if)# auto qos voip trust

Device# show auto qos
HundredGigE1/0/2
auto qos voip trust

Device# show running-config interface HundredGigE1/0/2
interface HundredGigE1/0/2
auto qos voip trust
end
```

Where to Go Next for Auto-QoS

Review the QoS documentation if you require any specific QoS changes to your auto-QoS configuration.

Feature History for Auto-QoS

This table provides release and related information for features explained in this module.

These features are available on all releases subsequent to the one they were introduced in, unless noted otherwise.

Release	Feature	Feature Information
Cisco IOS XE Gibraltar 16.11.1	Auto-QoS	Auto-QoS feature simplifies the deployment of QoS features. This feature determines the network design and enables QoS configurations so that the switch can prioritize different traffic flows.
Cisco IOS XE Cupertino 17.7.1	Auto-QoS	Support for this feature was introduced on the Cisco Catalyst 9600 Series Supervisor 2 Module (C9600X-SUP-2).

Use Cisco Feature Navigator to find information about platform and software image support. To access Cisco Feature Navigator, go to Cisco Feature Navigator.
