

# **IE 3000 Switch Debug Commands**

This appendix describes the **debug** privileged EXEC commands that have been created or changed for use with the IE 3000switch. These commands are helpful in diagnosing and resolving internetworking problems and should be enabled only under the guidance of Cisco technical support staff.

/!\ Caution

Because debugging output is assigned high priority in the CPU process, it can render the system unusable. For this reason, use the **debug** commands only to troubleshoot specific problems or during troubleshooting sessions with Cisco technical support staff. It is best to use the **debug** commands during periods of lower network traffic and fewer users. Debugging during these periods decreases the likelihood that increased **debug** command processing overhead will affect system use.

#### debug authentication

Use the **debug authentication** privileged EXEC command to enable debugging of the authentication settings on an interface. Use the **no** form of this command to disable debugging.

debug authentication {all | errors | events | sync | feature [all] [acct] [auth\_fail\_vlan]
 [auth\_policy] [autocfg] [critical] [dhcp] [guest\_vlan] [mab\_pm] [mda] [multi\_auth]
 [switch\_pm] [switch\_sync] [vlan\_assign] [voice] [webauth] [all | errors | events]}

no debug authentication {all | errors | events | sync | feature [all] [acct] [auth\_fail\_vlan] [auth\_policy] [autocfg] [critical] [dhcp] [guest\_vlan] [mab\_pm] [mda] [multi\_auth] [switch\_pm] [switch\_sync] [vlan\_assign] [voice] [webauth] [all | errors | events]}

Syntax Description	acct	(Optional) Display authentication manager accounting information.
	all	(Optional) Display all authentication manager debug messages.
	auth_fail_vlan	(Optional) Display authentication manager errors for the restricted VLAN.
	auth_policy	(Optional) Display authentication policy messages.
	autocfg	(Optional) Display autoconfiguration authentication manager debug messages.
	critical	(Optional) Display the inaccessible authentication bypass messages.
		<b>Note</b> The inaccessible authentication bypass feature is also referred to as critical authentication or the authentication, authorization, and accounting (AAA) fail policy.
	dhcp	(Optional) Display authentication manager debug messages on DHCP dynamic address-enable interfaces.
	errors	(Optional) Display all authentication manager error debug messages.
	events	(Optional) Display all autentication manager event debug messages, including registry and miscellaneous events.
	feature	(Optional) Display authentication manager feature debug messages
	guest_vlan	(Optional) Display guest VLAN authentication manager messages.
	mab_pm	(Optional) Display MAC authentication manager bypass authentication debug messages.
	mda	(Optional) Display multidomain authentication manager debug messages.
	multi_auth	(Optional) Display multi-authentication manager debug authentication messages.
	switch_pm	(Optional) Display switch port manager messages.
	switch_sync	(Optional) Display synchronization messages between the switch, the authentication server, and the connected devices.
	sync	(Optional) Display operational synchronization authentication manager debug messages.
	vlan_assign	(Optional) Display the VLAN-assignment debug messages.
	voice	(Optional) Display the voice-VLAN debug messages.
	webauth	(Optional) Display web authentication manager debug messages.

<b>Defaults</b> Authentication debugging is a	disabled.
---	-----------

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(50)SE	This command was introduced.

Usage Guidelines

The undebug authentication command is the same as the no debug authentication command.

<b>Related Commands</b>	Command	Description
	authentication control-direction	Configures the port mode as unidirectional or bidirectional.
	authentication event	Sets the action for specific authentication events.
	authentication fallback	Configures a port to use web authentication as a fallback method for clients that do not support IEEE 802.1x authentication.
	authentication host-mode	Sets the authorization manager mode on a port.
	authentication open	Enables or disables open access on a port.
	authentication order	Sets the order of authentication methods used on a port.
	authentication periodic	Enables or disables reauthentication on a port.
	authentication port-control	Enables manual control of the port authorization state.
	authentication priority	Adds an authentication method to the port-priority list.
	authentication violation	Configures the violation modes that occur when a new device connects to a port or when a new device connects to a port after the maximum number of devices are connected to that port.
	show authentication	Displays information about authentication manager events on the switch.

#### debug auto qos

Use the **debug auto qos** privileged EXEC command to enable debugging of the automatic quality of service (auto-QoS) feature. Use the **no** form of this command to disable debugging.

debug auto qos

no debug auto qos

- Syntax Description This command has no keywords or arguments.
- **Defaults** Auto-QoS debugging is disabled.
- Command Modes Privileged EXEC

 Release
 Modification

 12.2(44)EX
 This command was introduced.

**Usage Guidelines** To display the QoS configuration that is automatically generated when auto-QoS is enabled, enable debugging *before* you enable auto-QoS. You enable debugging by entering the **debug auto qos** privileged EXEC command.

The undebug auto qos command is the same as the no debug auto qos command.

#### **Examples** This example shows how to display the QoS configuration that is automatically generated when auto-QoS is enabled:

Switch# debug auto gos AutoQoS debugging is on Switch# configure terminal Enter configuration commands, one per line. End with CNTL/Z. Switch(config)# interface gigabitethernet1/1 Switch(config-if) # auto gos voip cisco-phone 21:29:41: mls qos map cos-dscp 0 8 16 26 32 46 48 56 21:29:41: mls qos 21:29:42: no mls qos srr-queue input cos-map 21:29:42: no mls qos srr-queue output cos-map 21:29:42: mls qos srr-queue input cos-map queue 1 threshold 3 0 21:29:42: mls qos srr-queue input cos-map queue 1 threshold 2 1 21:29:42: mls qos srr-queue input cos-map queue 2 threshold 1 2 21:29:42: mls qos srr-queue input cos-map queue 2 threshold 2 4 6 7 21:29:43: mls qos srr-queue input cos-map queue 2 threshold 3 3 5 21:29:43: mls qos srr-queue output cos-map queue 1 threshold 3 5 21:29:43: mls qos srr-queue output cos-map queue 2 threshold 3 3 6 7 21:29:44: mls qos srr-queue output cos-map queue 3 threshold 3 2 4 21:29:44: mls gos srr-queue output cos-map queue 4 threshold 2 1 21:29:44: mls qos srr-queue output cos-map queue 4 threshold 3 0

21:29:50: srr-queue bandwidth shape 10 0 0 0
21:29:50: srr-queue bandwidth share 10 10 60 20
```

<b>Related Commands</b>	Command	Description
	auto qos voip	Configures auto-QoS for voice over IP (VoIP) within a QoS domain.
	show auto qos	Displays the initial configuration that is generated by the automatic auto-QoS feature
	show debugging	Displays information about the types of debugging that are enabled.

# debug backup

Use the **debug backup** privileged EXEC command to enable debugging of the Flex Links backup interface. Use the **no** form of this command to disable debugging.

debug backup {all | errors | events | vlan-load-balancing}

no debug backup {all | errors | events | vlan-load-balancing}

Syntax Description	all	Display all backup interface debug messages.
	errors	Display backup interface error or exception debug messages.
	events	Display backup interface event debug messages.
	vlan-load- balancing	Display backup interface VLAN load balancing.
Defaults	Backup interface de	ebugging is disabled.
Command Modes	Privileged EXEC	
Command History	Release	Modification
-	12.2(44)EX	This command was introduced.
Usage Guidelines	The <b>undebug back</b>	<b>up</b> command is the same as the <b>no debug backup</b> command.
Related Commands	Command	Description

#### debug cip

Use the **debug cip** privileged EXEC command to enable debugging of the Common Industrial Protocol (CIP) subsystem. Use the **no** form of this command to disable debugging.

debug cip {assembly | connection manager | errors | event | file | io | packet | request response | security | session | socket}

no debug cip {assembly | connection manager | errors | event | file | io | packet | request response | security | session | socket}

Syntax Description	assembly	Display CIP assembly debug messages.
	connection manager	Display CIP connection manager debug messages.
	errors	Display CIP error debug messages.
		Display CIP event debug messages.
	event file	Display CIP file debug messages.
	io	Display CIP input/output (I/O) debug messages.
	packet	Display CIP packet debug messages.
	request response	Display CIP request response debug messages.
	security	Display CIP security debug messages.
	session	Display CIP session debug messages.
	socket	Display CIP socket debug messages.
Command Modes	Privileged EXEC	Modification
-	12.2(44)EX	This command was introduced.
Usage Guidelines	The <b>undebug cip</b> co	mmand is the same as the <b>no debug cip</b> command.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show cip	Displays information about the Common Industrial Protocol (CIP)

# debug cisp

Use the **debug cisp** global configuration command to enable debugging message exchanges and events on a Client Information Signalling Protocol (CISP)-enabled interface.Use the **no** form of this command to disable debugging.

debug cisp [all | errors | events | packets | sync]

#### no debug cisp [initialization | interface-configuration | rpc]

Syntax Description	all	Display all CISP debug messages.
	errors	Display CISP debug messages.
	events	Display CISP event debug messages.
	packets	Display CISP packet debug messages.
	sync	Display CISP operational synchronization debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
Command History	Release           12.2(50)SE	Modification This command was introduced.
Usage Guidelines	12.2(50)SE The <b>undebug cisp</b> comm	This command was introduced. nand is the same as the <b>no debug cisp</b> command.
Usage Guidelines	12.2(50)SE The <b>undebug cisp</b> comm	This command was introduced. nand is the same as the <b>no debug cisp</b> command. Description
Usage Guidelines	12.2(50)SE The <b>undebug cisp</b> comm	This command was introduced. nand is the same as the <b>no debug cisp</b> command.
Command History Usage Guidelines Related Commands	12.2(50)SE The <b>undebug cisp</b> comm	This command was introduced. nand is the same as the <b>no debug cisp</b> command. Description

# debug cluster

Use the **debug cluster** privileged EXEC command to enable debugging of cluster-specific events. Use the **no** form of this command to disable debugging.

debug cluster {discovery | events | extended | hsrp | http | ip [packet] | members | nat | neighbors | platform | snmp | vqpxy}

no debug cluster {discovery | events | extended | hsrp | http | ip [packet] | members | nat | neighbors | platform | snmp | vqpxy}

Syntax Description	discovery	Display cluster discovery debug messages.
	events	Display cluster event debug messages.
	extended	Display extended discovery debug messages.
	hsrp	Display the Hot Standby Router Protocol (HSRP) debug messages.
	http	Display Hypertext Transfer Protocol (HTTP) debug messages.
	ip [packet]	Display IP or transport packet debug messages.
	members	Display cluster member debug messages.
	nat	Display Network Address Translation (NAT) debug messages.
	neighbors	Display cluster neighbor debug messages.
	platform	Display platform-specific cluster debug messages.
	snmp	Display Simple Network Management Protocol (SNMP) debug messages.
- footba	vqpxy	Display VLAN Query Protocol (VQP) proxy debug messages.
efaults	<b>vqpxy</b> Debugging is disab	
Defaults Command Modes Command History	Debugging is disab	

Related	Commands
---------	----------

ated Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show cluster	Displays the cluster status and a summary of the cluster to which the switch belongs.
	show cluster candidates	Displays a list of candidate switches when entered on the command switch.
	show cluster members	Displays information about cluster members when executed on the command switch.

#### debug dot1x

Use the **debug dot1x** privileged EXEC command to enable debugging of the IEEE 802.1x authentication feature. Use the **no** form of this command to disable debugging.

debug dot1x {all | errors | events | feature | packets | registry | state-machine}

no debug dot1x {all | errors | events | feature | packets | registry | state-machine}

	all	Display all IEEE 802.1x authentication debug messages.
	errors	Display IEEE 802.1x error debug messages.
	events	Display IEEE 802.1x event debug messages.
	feature	Display IEEE 802.1x feature debug messages.
	packets	Display IEEE 802.1x packet debug messages.
	registry	Display IEEE 802.1x registry invocation debug messages.
	state-machine	Display state-machine related-events debug messages.
Note	Though visible in	the command-line help strings, the <b>redundancy</b> keyword is not supported.
Defaults	Debugging is dis	abled.

# debug dtp

Use the **debug dtp** privileged EXEC command to enable debugging of the Dynamic Trunking Protocol (DTP) activity. Use the **no** form of this command to disable debugging.

debug dtp {aggregation | all | decision | events | oserrs | packets | queue | states | timers}

no debug dtp {aggregation | all | decision | events | oserrs | packets | queue | states | timers}

Displays DTP information for the switch or for a specified interface.

Syntax Description	aggregation	Display DTP user-message aggregation debug messages.
	all	Display all DTP debug messages.
	decision	Display the DTP decision-table debug messages.
	events	Display the DTP event debug messages.
	oserrs	Display DTP operating system-related error debug messages.
	packets	Display DTP packet-processing debug messages.
	queue	Display DTP packet-queueing debug messages.
	states	Display DTP state-transition debug messages.
	timers	Display DTP timer-event debug messages.
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
Usage Guidelines		ommand is the same as the <b>no debug dtp</b> command.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

show dtp

debug eap

Use the **debug eap** privileged EXEC command to enable debugging of the Extensible Authentication Protocol (EAP) activity. Use the **no** form of this command to disable debugging.

debug dot1x {all | authenticator | errors | events | md5 | packets | peer | sm}

no debug dot1x {all | authenticator | errors | events | md5 | packets | peer | sm}

Syntax Description	all	Display all EAP debug messages.
	authenticator	Display authenticator debug messages.
	errors	Display EAP error debug messages.
	events	Display EAP event debug messages.
	md5	Display EAP-MD5 debug messages.
	packets	Display EAP packet debug messages.
	peer	Display EAP peer debug messages.
	sm	Display EAP state-machine related-events debug messages.
Defaults	Debugging is dis	auleu.
Command Modes	Privileged EXEC	
	Privileged EXEC

	Release 12.2(44)EX The undebug do	Modification         This command was introduced.         t1x command is the same as the no debug dot1x command.         Description

OL-27303-02

#### debug etherchannel

Use the **debug etherchannel** privileged EXEC command to enable debugging of the EtherChannel/PAgP shim. This shim is the software module that is the interface between the Port Aggregation Protocol (PAgP) software module and the port manager software module. Use the **no** form of this command to disable debugging.

debug etherchannel [all | detail | error | event | idb]

no debug etherchannel [all | detail | error | event | idb]

	show debugging	Displays information about the types of debugging that are enabled. Displays EtherChannel information for the channel.	
elated Commands	Command	Description	
	i ne <b>undebug etherch</b> :	annel command is the same as the <b>no debug etherchannel</b> command.	
	The <b>undebug etherchannel</b> command is the same as the <b>no debug etherchannel</b> command.		
sage Guidelines	If you do not specify a	keyword, all debug messages appear.	
	12.2(44)EX	This command was introduced.	
Command History	Release	Modification	
ommand Modes	Privileged EXEC		
efaults	Debugging is disabled.		
Note	Though visible in the c	command-line help strings, the <b>linecard</b> keyword is not supported.	
	idb (Optiona	al) Display PAgP interface descriptor block debug messages.	
		al) Debug major EtherChannel event messages.	
	error (Optiona	al) Display EtherChannel error debug messages.	
	detail (Optiona	al) Display detailed EtherChannel debug messages.	
Syntax Description	(• F ·····	al) Display all EtherChannel debug messages.	

# debug interface

Use the **debug interface** privileged EXEC command to enable debugging of interface-related activities. Use the **no** form of this command to disable debugging.

**no debug interface** {*interface-id* | **null** *interface-number* | **port-channel** *port-channel-number* | **vlan** *vlan-id*}

Syntax Description	interface-id	Display debug messages for the specified physical port, identified by type
oynax besonption	interface ta	switch number/module number/ port, for example <b>gigabitethernet 0/2</b> .
	null interface-number	Display debug messages for null interfaces. The <i>interface-number</i> is always <b>0</b> .
	<b>port-channel</b> port-channel-number	Display debug messages for the specified EtherChannel port-channel interface. The <i>port-channel-number</i> range is 1 to .
	vlan vlan-id	Display debug messages for the specified VLAN. The <i>vlan-id</i> range is 1 to 4094.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
Usage Guidelines	If you do not specify a	keyword, all debug messages appear.
	The undebug interface	command is the same as the <b>no debug interface</b> command.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show etherchannel	Displays EtherChannel information for the channel.

**debug interface** {*interface-id* | **null** *interface-number* | **port-channel** *port-channel-number* | **vlan** *vlan-id*}

# debug ip dhcp snooping

Use the **debug ip dhcp snooping** privileged EXEC command to enable debugging of DHCP snooping. Use the **no** form of this command to disable debugging.

**debug ip dhcp snooping** {*mac-address* | **agent** | **event** | **packet**}

**no debug ip dhcp snooping** {*mac-address* | **agent** | **event** | **packet**}

Syntax Description	mac-address	Display debug messages for a DHCP packet with the specified MAC address.
Cyntax Desonption	agent	Display debug messages for DHCP snooping agents.
	event	Display debug messages for DHCP snooping events.
	packet	Display debug messages for DHCP snooping.
Defaults	Debugging is d	isabled.
Command Modes	Privileged EXE	C
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
Usage Guidelines	The undebug ip dhcp snooping command is the same as the no debug ip dhcp snooping	
Related Commands	Command	Description
	show debugging	ng Displays information about the types of debugging that are enabled.

# debug ip verify source packet

Use the **debug ip verify source packet** privileged EXEC command to enable debugging of IP source guard. Use the **no** form of this command to disable debugging.

debug ip verify source packet

no debug ip verify source packet

Syntax Description	This command has no arguments or keywords.		
Defaults	Debugging is di	isabled.	
Command Modes	Privileged EXE	C	
Command History	Release	Modification	
	12.2(50)SE	This command was introduced.	
Usage Guidelines	The <b>undebug i</b> command.	p verify source packet command is the same as the no debug ip verify source packet	
Related Commands	Command	Description	
	show debuggin	ng Displays information about the types of debugging that are enabled.	

# debug ip igmp filter

Use the **debug ip igmp filter** privileged EXEC command to enable debugging of Internet Group Management Protocol (IGMP) filter events. Use the **no** form of this command to disable debugging.

debug ip igmp filter

no debug ip igmp filter

Syntax Description	This command has no arguments o	r keywords.
--------------------	---------------------------------	-------------

- **Defaults** Debugging is disabled.
- **Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(44)EX	This command was introduced.

**Usage Guidelines** The **undebug ip igmp filter** command is the same as the **no debug ip igmp filter** command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

# debug ip igmp max-groups

Use the **debug ip igmp max-groups** privileged EXEC command to enable debugging of Internet Group Management Protocol (IGMP) maximum groups events. Use the **no** form of this command to disable debugging.

debug ip igmp max-groups

no debug ip igmp max-groups

<b>ntax Description</b> This command has no arguments or keywords.
--

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(44)EX	This command was introduced.

# **Usage Guidelines** The **undebug ip igmp max-groups** command is the same as the **no debug ip igmp max-groups** command.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

#### debug ip igmp snooping

Use the **debug igmp snooping** privileged EXEC command to enable debugging of Internet Group Management Protocol (IGMP) snooping activity. Use the **no** form of this command to disable debugging.

debug ip igmp snooping [group | management | querier | router | timer]

no debug ip igmp snooping [group | management | querier | router | timer]

Syntax Description	group	(Optional) Display IGMP snooping group activity debug messages.
	management	(Optional) Display IGMP snooping management activity debug messages.
	querier	(Optional) Display IGMP snooping querier debug messages.
	router	(Optional) Display IGMP snooping router activity debug messages.
	timer	(Optional) Display IGMP snooping timer event debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
Command History	Release	<b>Modification</b> This command was introduced.
Command History Usage Guidelines	12.2(44)EX	
	12.2(44)EX	This command was introduced.
Usage Guidelines	12.2(44)EX The <b>undebug ip igmp</b>	This command was introduced. snooping command is the same as the no debug ip igmp snooping command

# debug lacp

Use the **debug lacp** privileged EXEC command to enable debugging of Link Aggregation Control Protocol (LACP) activity. Use the **no** form of this command to disable debugging.

debug lacp [all | event | fsm | misc | packet]

no debug lacp [all | event | fsm | misc | packet]

Syntax Description	all	(Optional) Display all LACP debug messages.
	event	(Optional) Display LACP event debug messages.
	fsm	(Optional) Display LACP finite state-machine debug messages.
	misc	(Optional) Display miscellaneous LACP debug messages.
	packet	(Optional) Display LACP packet debug messages.
Defaults	Debugging is disa	bled.
Command Modes	Privileged EXEC	
Command Modes Command History	Privileged EXEC	Modification
		<b>Modification</b> This command was introduced.
	<b>Release</b> 12.2(44)EX	
Command History Usage Guidelines	<b>Release</b> 12.2(44)EX	This command was introduced.
Command History	Release 12.2(44)EX The undebug lac	This command was introduced.

# debug IIdp packets

Use the **debug lldp packets** privileged EXEC command to enable debugging of Link Layer Discovery Protocol (LLDP) packets. Use the **no** form of this command to disable debugging.

debug lldp packets

no debug lldp packets

Syntax Description	This command has no arguments or keywords.
--------------------	--

- **Defaults** Debugging is disabled.
- **Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(50)SE	This command was introduced.

**Usage Guidelines** The **undebug lldp packets** command is the same as the **no debug lldp packets** command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

# debug mac-notification

Use the **debug mac-notification** privileged EXEC command to enable debugging of MAC notification events. Use the **no** form of this command to disable debugging.

debug mac-notification

no debug mac-notification

- **Defaults** Debugging is disabled.
- **Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(44)EX	This command was introduced.

**Usage Guidelines** The **undebug mac-notification** command is the same as the **no debug mac-notification** command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show mac address-table notification	Displays the MAC address notification information for all interfaces or the specified interface.

#### debug matm

Use the **debug matm** privileged EXEC command to enable debugging of platform-independent MAC address management. Use the **no** form of this command to disable debugging.

debug matm

no debug matm

- **Defaults** Debugging is disabled.
- **Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(44)EX	This command was introduced.

**Usage Guidelines** The **undebug matm** command is the same as the **no debug matm** command.

<b>Related Commands</b>	Command	Description
	debug platform matm	Displays information about platform-dependent MAC address management.
	show debugging	Displays information about the types of debugging that are enabled.

### debug matm move update

Use the **debug matm move update** privileged EXEC command to enable debugging of MAC address-table move update message processing.

debug matm move update

no debug matm move update

**Defaults** Debugging is disabled.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(44)EX	This command was introduced.

**Usage Guidelines** The **undebug matm move update** command is the same as the **no debug matm move update** command.

Related Commands	Command	Description
	mac address-table move update {receive   transmit}	Configures MAC address-table move update feature on the switch.
	show debugging	Displays information about the types of debugging that are enabled.
	show mac address-table move update	Displays the MAC address-table move update information on the switch.

#### debug monitor

Use the **debug monitor** privileged EXEC command to enable debugging of the Switched Port Analyzer (SPAN) feature. Use the **no** form of this command to disable debugging.

debug monitor {all | errors | idb-update | info | list | notifications | platform | requests | snmp}

no debug monitor {all | errors | idb-update | info | list | notifications | platform | requests | snmp}

Syntax Description	all	Display all SPAN debug messages.
	errors	Display detailed SPAN error debug messages.
	idb-update	Display SPAN interface description block (IDB) update-trace debug messages.
	info	Display SPAN informational-tracing debug messages.
	list	Display SPAN port and VLAN-list tracing debug messages.
	notifications	Display SPAN notification debug messages.
	platform	Display SPAN platform-tracing debug messages.
	requests	Display SPAN request debug messages.
	snmp	Display SPAN and Simple Network Management Protocol (SNMP) tracing debug messages.
Defaults	<b>snmp</b> Debugging is disabl	debug messages.
		debug messages.
Defaults Command Modes Command History	Debugging is disabl	debug messages.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show monitor	Displays information about all SPAN and remote SPAN (RSPAN) sessions on the switch.

# debug mvrdbg

Use the **debug mvrdbg** privileged EXEC command to enable debugging of Multicast VLAN Registration (MVR). Use the **no** form of this command to disable debugging.

debug mvrdbg {all | events | igmpsn | management | ports}

no debug mvrdbg {all | events | igmpsn | management | ports}

Syntax Description	all	Display all MVR activity debug messages.
	events	Display MVR event-handling debug messages.
	igmpsn	Display MVR Internet Group Management Protocol (IGMP) snooping-activity debug messages.
	management	Display MVR management-activity debug messages.
	ports	Display MVR port debug messages.
Defaults	Debugging is disabl	ed.
Command Modes	Privileged EXEC	
	Privileged EXEC	Modification

# debug nmsp

Use the **debug nmsp** privileged EXEC command to the enable debugging of the Network Mobility Services Protocol (NMSP) on the switch. This command is available only when your switch is running the cryptographic (encrypted) software image. Use the **no** form of this command to disable debugging.

debug nmsp {all | connection | error | event | packet | rx | tx}

no debug nmsp

Syntax Description	This command has	no arguments o	r keywords.
--------------------	------------------	----------------	-------------

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(50)SE	This command was introduced.

**Usage Guidelines** The **undebug nmsp** command is the same as the **no debug nmsp** command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show nmsp	Displays the NMSP information.

#### debug nvram

Use the **debug nvram** privileged EXEC command to enable debugging of NVRAM activity. Use the **no** form of this command to disable debugging.

debug nvram

no debug nvram

Syntax Description	This command has no	arguments or keywords.
--------------------	---------------------	------------------------

- **Defaults** Debugging is disabled.
- Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(44)EX	This command was introduced.

**Usage Guidelines** The **undebug nvram** command is the same as the **no debug nvram** command.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

# debug pagp

Use the **debug pagp** privileged EXEC command to enable debugging of Port Aggregation Protocol (PAgP) activity. Use the **no** form of this command to disable debugging.

debug pagp [all | dual-active | event | fsm | misc | packet]

no debug pagp [all | dual-active | event | fsm | misc | packet]

Syntax Description	all	(Optional) Display all PAgP debug messages.
	dual-active	(Optional) Display dual-active detection messages.
	event	(Optional) Display PAgP event debug messages.
	fsm	(Optional) Display PAgP finite state-machine debug messages.
	misc	(Optional) Display miscellaneous PAgP debug messages.
	packet	(Optional) Display PAgP packet debug messages.
Defaults	Debugging is dis	abled.

#### debug platform acl

Use the **debug platform acl** privileged EXEC command to enable debugging of the access control list (ACL) manager. Use the **no** form of this command to disable debugging.

debug platform acl {all | exit | label | main | racl | vacl | vlmap | warn}

no debug platform acl {all | exit | label | main | racl |vacl | vlmap | warn}

#### **Syntax Description**

on	all	Display all ACL manager debug messages.
	exit	Display ACL exit-related debug messages.
	label	Display ACL label-related debug messages.
main Display the main or important ACL debu		Display the main or important ACL debug messages.
racl Display router ACL related debug message		Display router ACL related debug messages.
vacl Display VLAN ACL-related debug messages.		Display VLAN ACL-related debug messages.
vlmap Display ACL VLAN-map-related debug messages.		Display ACL VLAN-map-related debug messages.
	warn Display ACL warning-related debug messages.	

Note

Though visible in the command-line help strings, the stack keyword is not supported.

#### Switch# debub platform acl ?

all	ACL Manager All
exit	ACL Exit related events
expand	VMR L4Op allocation/expansion related events
fspan	ACL Fspan related events
ipe	ACL IPE related events
ipv6	ACL IPv6 related
label	ACL Label related events
limitations	ACL Limitations related events
main	ACL Main related events
odm	ODM related events
port-acl	Port-ACL related events
racl	ACL Racl related events
stack	ACL Stack related events
urpf	ACL URPF related events
vacl	ACL Vacl related events
vlmap	ACL Vlmap related events
warn	ACL Warn related events

Switch#

**Defaults** Debugging is disabled.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(44)EX	This command was introduced.
	12.2(52)SE	The <b>racl</b> , <b>vacl</b> , and <b>vlmap</b> keywords were added for switches running the IP services image.
Usage Guidelines	The <b>undebug platfor</b>	<b>m acl</b> command is the same as the <b>no debug platform acl</b> command.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

# debug platform backup interface

Use the **debug platform backup interface** privileged EXEC command to enable debugging of the Flex Links platform backup interface. Use the **no** form of this command to disable debugging.

debug platform backup interface

no debug platform backup interface

- **Defaults** Platform backup interface debugging is disabled.
- Command Modes Privileged EXEC

 Release
 Modification

 12.2(44)EX
 This command was introduced.

#### Usage Guidelines The undebug platform backup interface command is the same as the no debug platform backup interface command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

# debug platform cisp

Use the **debug platform cisp** global configuration command to enable platform-level debugging of a switch that has one or more Client Information Signalling Protocol (CISP)-enabled interfaces. Use the **no** form of this command to disable debugging.

debug platform cisp [initialization | interface-configuration | rpc]

no debug platform cisp [initialization | interface-configuration | rpc]

Syntax Description	initialization	Enable debugging of the CISP initialization sequence.
	interface-configuration	Enable debugging of the CISP configuration.
	rpc	Enable debugging of the CISP RPC requests.
efaults	Debugging is disabled.	
ommand Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(50)SE	This command was introduced.
Jsage Guidelines Related Commands		isp command is the same as the <b>no debug platform cisp</b> command. Description
	The undebug platform c	isp command is the same as the <b>no debug platform cisp</b> command. Description
	The undebug platform c	isp command is the same as the <b>no debug platform cisp</b> command. Description Enables Client Information Signalling Protocol (CISP)

#### debug platform cpu-queues

Use the **debug platform cpu-queues** privileged EXEC command to enable debugging of platform central processing unit (CPU) receive queues. Use the **no** form of this command to disable debugging.

debug platform cpu-queues {broadcast-q | cbt-to-spt-q | cpuhub-q | host-q | icmp-q | igmp-snooping-q | layer2-protocol-q | logging-q | remote-console-q | routing-protocol-q | rpffail-q | software-fwd-q | stp-q }

no debug platform cpu-queues {broadcast-q | cbt-to-spt-q | cpuhub-q | host-q | icmp-q | igmp-snooping-q | layer2-protocol-q | logging-q | remote-console-q | routing-protocol-q | rpffail-q | software-fwd-q | stp-q}

Syntax Description	broadcast-q	Display debug messages about packets received by the broadcast queue.
	cbt-to-spt-q	Display debug messages about packets received by the core-based tree to
		shortest-path tree (cbt-to-spt) queue.
	cpuhub-q	Display debug messages about packets received by the CPU heartbeat queue.
	host-q	Display debug messages about packets received by the host queue.
	icmp-q	Display debug messages about packets received by the Internet Control Message Protocol (ICMP) queue.
	igmp-snooping-q	Display debug messages about packets received by the Internet Group Management Protocol (IGMP)-snooping queue.
	layer2-protocol-q	Display debug messages about packets received by the Layer 2 protocol queue.
	logging-q	Display debug messages about packets received by the logging queue.
	remote-console-q	Display debug messages about packets received by the remote console queue.
	routing-protocol-q	Display debug messages about packets received by the routing protocol queue.
	rpffail-q	Display debug messages about packets received by the reverse path forwarding (RFP) failure queue.
	software-fwd-q	Debug packets received by the software forwarding queue.
	stp-q	Debug packets received by the Spanning Tree Protocol (STP) queue.

**Defaults** Debugging is disabled.

Command Modes Privileged EXEC

#### **Command History**

 Release
 Modification

 12.2(44)EX
 This command was introduced.

 12.2(52)SE
 The routing-protocol-Q and rpffail-q keywords were added for switches running the IP services image.

Usage Guidelines The undebug platform cpu-queues command is the same as the no debug platform cpu-queues command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

## debug platform dot1x

Use the **debug platform dot1x** privileged EXEC command to enable debugging of IEEE 802.1x events. Use the **no** form of this command to disable debugging.

debug platform dot1x {initialization | interface-configuration | rpc}

no debug platform dot1x {initialization | interface-configuration | rpc}

Syntax Description	initialization	Display IEEE 802.1x-authentication initialization sequence debug messages.
	interface-configuration	Display IEEE 802.1x interface configuration-related debug messages.
	rpc	Display IEEE 802.1x remote procedure call (RPC) request debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
Usage Guidelines	The undebug platform of	dot1x command is the same as the no debug platform dot1x command.
Usage Guidelines Related Commands	The undebug platform o	dot1x command is the same as the no debug platform dot1x command. Description

# debug platform etherchannel

Use the **debug platform etherchannel** privileged EXEC command to enable debugging of platform-dependent EtherChannel events. Use the **no** form of this command to disable debugging.

debug platform etherchannel {init | link-up | rpc | warnings}

no debug platform etherchannel {init | link-up | rpc | warnings}

Syntax Description	init	Display EtherChannel module initialization debug messages.
	link-up	Display EtherChannel link-up and link-down related debug messages.
	rpc	Display EtherChannel remote procedure call (RPC) debug messages.
	warnings	Display EtherChannel warning debug messages.
Defaults	Debugging is d	isabled.
Command Modes	Privileged EXE	C
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
Usage Guidelines	The <b>undebug p</b> command.	olatform etherchannel command is the same as the no debug platform etherchannel
Related Commands	Command	Description

## debug platform fallback-bridging

Use the **debug platform fallback-bridging** privileged EXEC command to enable debugging of the platform-dependent fallback bridging manager. Use the **no** form of this command to disable debugging.

debug platform fallback-bridging [error | retry | rpc {events | messages}]

no debug platform fallback-bridging [error | retry | rpc {events | messages}]

This command is available only if your switch is running the IP services image.

Syntax Description	error	(Optional) Display fallback bridging manager error condition messages.
	retry	(Optional) Display fallback bridging manager retry messages.
	rpc {events   messages}	(Optional) Display fallback bridging debugging information. The keywords have these meanings:
		• events—Display remote procedure call (RPC) events.
		• messages—Display RPC messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification

B-41

#### debug platform forw-tcam

Use the **debug platform forw-tcam** privileged EXEC command to enable debugging of the forwarding ternary content addressable memory (TCAM) manager. Use the **no** form of this command to disable debugging.

debug platform forw-tcam [adjustment | allocate | audit | error | move | read | write]

no debug platform forw-tcam [adjustment | allocate | audit | error | move | read | write]

Syntax Description	adjustment	(Optional) Display TCAM manager adjustment debug messages.
	allocate	(Optional) Display TCAM manager allocation debug messages.
	audit	(Optional) Display TCAM manager audit messages.
	error	(Optional) Display TCAM manager error messages.
	move	(Optional) Display TCAM manager move messages.
	read	(Optional) Display TCAM manager read messages.
	write	(Optional) Display TCAM manager write messages.
Defaults	Debugging is disab	oled.
Command Modes	Privileged EXEC

#### debug platform ip dhcp

Use the **debug platform ip dhcp** privileged EXEC command to debug DHCP events. Use the **no** form of this command to disable debugging.

debug platform ip dhcp [all | error | event | packet | rpc]

no debug platform ip dhcp [all | error | event | packet | rpc]

Syntax Description	all	(Optional) Display all DHCP debug messages.
· ·	error	(Optional) Display DHCP error debug messages.
	event	(Optional) Display DHCP event debug messages.
	packet	(Optional) Display DHCP packet-related debug messages.
	грс	(Optional) Display DHCP remote procedure call (RPC) request debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
-		This command was introduced. <b>p dhcp</b> command is the same as the <b>no debug platform ip dhcp</b> command. <b>Description</b>
	The undebug platform ip	p dhcp command is the same as the <b>no debug platform ip dhcp</b> command.
Usage Guidelines Related Commands	The undebug platform in Command	p dhcp command is the same as the no debug platform ip dhcp command. Description

#### debug platform ip igmp snooping

Use the **debug platform ip igmp snooping** privileged EXEC command to enable debugging of platform-dependent Internet Group Management Protocol (IGMP) snooping. Use the **no** form of this command to disable debugging.

- debug platform ip igmp snooping {all | di | error | event | group | mgmt | pak | retry | rpc | warn}
- debug platform ip igmp snooping pak {*ip-address* | error | ipopt | leave| query | report | rx | svi | tx}
- debug platform ip igmp snooping rpc [cfg | l3mm | misc | vlan]
- no debug platform ip igmp snooping {all | di | error | event | group | mgmt | pak | retry | rpc | warn}

Syntax Description	all	Display all IGMP snooping debug messages.
	di	Display IGMP snooping destination index (di) coordination remote procedure call (RPC) debug messages.
	error	Display IGMP snooping error messages.
	event	Display IGMP snooping event debug messages.
	group	Display IGMP snooping group debug messages.
	mgmt	Display IGMP snooping management debug messages.
	pak { <i>ip-address</i>   error   ipopt   leave	Display IGMP snooping packet event debug messages. The keywords have these meanings:
	query   report   rx   svi   tx }	• <i>ip-address</i> —IP address of the IGMP group.
	~···)	• error—Display IGMP snooping packet error debug messages.
		• <b>ipopt</b> —Display IGMP snooping IP bridging options debug messages.
		• leave—Display IGMP snooping leave debug messages.
		• <b>query</b> —Display IGMP snooping query debug messages.
		• <b>report</b> —Display IGMP snooping report debug messages.
		• <b>rx</b> —Display IGMP snooping received packet debug messages.
		• <b>svi</b> —Display IGMP snooping switched virtual interface (SVI) packet debug messages.
		• tx—Display IGMP snooping sent packet debug messages.
	retry	Display IGMP snooping retry debug messages.

	rpc [cfg   l3mm   misc   vlan]	Display IGMP snooping remote procedure call (RPC) event debug messages. The keywords have these meanings:
		• cfg—(Optional) Display IGMP snooping RPC debug messages.
		• <b>I3mm</b> —(Optional) IGMP snooping Layer 3 multicast router group RPC debug messages.
		• <b>misc</b> —(Optional) IGMP snooping miscellaneous RPC debug messages.
		• vlan—(Optional) IGMP snooping VLAN assert RPC debug messages.
	warn	Display IGMP snooping warning messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
	12.2(44)EX 12.2(52)SE	This command was introduced. The <b>rpc l3mm</b> keyword was added on switches running the IP services image.
Usage Guidelines	12.2(52)SE	The <b>rpc l3mm</b> keyword was added on switches running the IP services
Usage Guidelines	12.2(52)SE	The <b>rpc l3mm</b> keyword was added on switches running the IP services image.
	12.2(52)SE The undebug platform snooping command.	The <b>rpc l3mm</b> keyword was added on switches running the IP services image.

#### debug platform ip multicast

Use the **debug platform ip multicast** privileged EXEC command to enable debugging of IP multicast routing. Use the **no** form of this command to disable debugging.

debug platform ip multicast {all | mdb | mdfs-rp-retry | midb | mroute-rp | resources | retry | rpf-throttle | snoop-events | software-forward | swidb-events | vlan-locks}

no debug platform ip multicast {all | mdb | mdfs-rp-retry | midb | mroute-rp | resources | retry | rpf-throttle | snoop-events | software-forward | swidb-events | vlan-locks}

This command is available only if your switch is running the IP services image.

Syntax Description	all	Display all platform IP-multicast event debug messages.
		<b>Note</b> Using this command can degrade the performance of the switch.
	mdb	Display IP-multicast debug messages for multicast distributed fast switching (MDFS) multicast descriptor block (mdb) events.
	mdfs-rp-retry	Display IP-multicast MDFS rendezvous point (RP) retry event debug messages.
	midb	Display IP-multicast MDFS multicast interface descriptor block (MIDB) debug messages.
	mroute-rp	Display IP-multicast RP event debug messages.
	resources	Display IP-multicast hardware resource debug messages.
	retry	Display IP-multicast retry processing event debug messages.
	rpf-throttle	Display IP-multicast reverse path forwarding (RPF) throttle event debug messages.
	snoop-events	Display IP-multicast IGMP snooping event debug messages.
	software-forward	Display IP-multicast software forwarding event debug messages.
	swidb-events	Display IP-multicast MDFS software interface descriptor block (swidb) or global event debug messages.
	vlan-locks	Display IP-multicast VLAN lock and unlock event debug messages.
Defaults	Debugging is disable	d.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2.(52)SE	This command was introduced.

Usage Guidelines The undebug platform ip multicast command is the same as the no debug platform ip multicast command.

## debug platform ip source-guard

Use the **debug platform ip source-guard** privileged EXEC command to debug IP source guard events. Use the **no** form of this command to disable debugging.

debug platform ip source-guard {all | error | event}

no debug platform ip source-guard {all | error | event }

Syntax Description	all Di	splay all IP source-guard platform debug messages.
	error Di	splay IP source-guard platform error debug messages.
	event Di	splay IP source-guard platform event debug messages.
Defaults	Debugging is disabled.	
ommand Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(50)SE	This command was introduced.
Usage Guidelines	source-guard comman	
-	source-guard comman	d. Description
Usage Guidelines Related Commands	source-guard comman	d.

#### debug platform ip unicast

Use the **debug platform ip unicast** privileged EXEC command to enable debugging of platform-dependent IP unicast routing. Use the **no** form of this command to disable debugging.

debug platform ip unicast {adjacency | all | arp | dhcp | errors | events | interface | mpath | registries | retry | route | rpc | standby | statistics}

no debug platform ip unicast {adjacency | all | arp | dhcp | errors | events | interface | mpath | registries | retry | route | rpc | standby | statistics}

This command is available only if your switch is running the IP services image.

Syntax Description	adjacency	Display IP unicast routing adjacency programming event debug messages.
	all	Display all platform IP unicast routing debug messages.
		<b>Note</b> Using this command can degrade the performance of the switch.
	arp	Display IP unicast routing Address Resolution Protocol (ARP) and ARP throttling debug messages.
	dhcp	Display IP unicast routing DHCP dynamic address-related event debug messages.
	errors	Display all IP unicast routing error debug messages, including resource allocation failures.
	events	Display all IP unicast routing event debug messages, including registry and miscellaneous events.
	interface	Display IP unicast routing interface event debug messages.
	mpath	Display IP unicast routing multi-path adjacency programming event debug messages (present when performing equal or unequal cost routing).
	registries	Display IP unicast routing forwarding information database (FIB), adjacency add, update, and delete registry event debug messages.
	retry	Display IP unicast routing reprogram FIBs with ternary content addressable memory (TCAM) allocation failure debug messages.
	route	Display IP unicast routing FIB TCAM programming event debug messages.
	rpc	Display IP unicast routing Layer 3 unicast remote procedure call (RPC) interaction debug messages.
	standby	Display IP unicast routing standby event debug messages, helpful in troubleshooting Hot Standby Routing Protocol (HSRP) issues.
	statistics	Display IP unicast routing statistics gathering-related event debug messages.

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(52)SE	This command was introduced.
Usage Guidelines	The undebug r	lettern in unicest command is the same as the no debug plotform in unicest command
Usage Guidennes		<b>blatform ip unicast</b> command is the same as the <b>no debug platform ip unicast</b> command.
		<b>m ip wccp</b> privileged EXEC command to enable debugging of Web Cache n Protocol (WCCP). Use the <b>no</b> form of this command to disable debugging.
	debug pla	tform ip wccp {acl   event   odm   trace}
	no debug	platform ip wccp {acl   event   odm   trace}
Note	This command	is available only if your switch is running the IP services image.
Syntax Description	acl	Display WCCP access control lists (ACLs).
	event	Display WCCP event debug messages.
	odm	Display WCCP OD merge VMRs.
	trace	Trace WCCP execution.
Defaults	Debugging is d	lisahlad
Delaults	Debugging is d	iisaoleu.
Command Modes	Privileged EXI	EC
Command History	Release	Modification
	12.2(52)SE	This command was introduced.
Usage Guidelines		<b>blatform ip wccp</b> command is the same as the <b>no debug platform ip wccp</b> command.

## debug platform led

Use the **debug platform led** privileged EXEC command to enable debugging of light-emitting diode (LED) actions. Use the **no** form of this command to disable debugging.

debug platform led {generic | signal}

no debug platform led {generic | signal}

ntax Description	generic D	isplay LED generic action debug messages.
	signal D	isplay LED signal bit map debug messages.
Note	Though visible i	n the command-line help strings, the <b>stack</b> keyword is not supported.
<u> </u>		
efaults	Debugging is dis	abled.
ommand Modes	Privileged EXEC	
ommand History	Release	Modification
ommand History	<b>Release</b> 12.2(44)EX	<b>Modification</b> This command was introduced.

# debug platform matm

Use the **debug platform matm** privileged EXEC command to enable debugging of platform-dependent MAC address management. Use the **no** form of this command to disable debugging.

debug platform matm {aging | all | ec-aging | errors | learning | rpc | secure-address | warnings }

no debug platform matm {aging | all | ec-aging | errors | learning | rpc | secure-address | warnings}

Syntax Description	aging	Display MAC address aging debug messages.
	all	Display all platform MAC address management event debug messages.
	ec-aging	Display EtherChannel address aging-related debug messages.
	errors	Display MAC address management error messages.
	learning	Display MAC address management address-learning debug messages.
	rpc	Display MAC address management remote procedure call (RPC) related debug
		messages.
	secure-address	Display MAC address management secure address learning debug messages.
	warning	Display MAC address management warning messages.
Defaults Command Modes	Debugging is disal Privileged EXEC	bled.
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
Usage Guidelines	The undebug plat	form matm command is the same as the no debug platform matm command.
Related Commands	Command	Description
	debug matm	Displays information about platform-independent MAC address management.
	show debugging	Displays information about the types of debugging that are enabled.

## debug platform messaging application

Use the **debug platform messaging application** privileged EXEC command to enable debugging of application messaging activity. Use the **no** form of this command to disable debugging.

- debug platform messaging application {all | badpak | cleanup | events | memerr | messages | usererr}
- no debug platform messaging application {all | badpak | cleanup | events | memerr | messages | usererr}

ntax Description	all	Display all application-messaging debug messages.
	badpak	Display bad-packet debug messages.
	cleanup	Display clean-up debug messages.
	events	Display event debug messages.
	memerr	Display memory-error debug messages.
	messages	Display application-messaging debug messages.
	usererr	Display user-error debug messages.
Note	Though visible in the	command-line help strings, the <b>stackchg</b> keyword is not supported.
	Debugging is disabled	1.

#### debug platform phy

Use the **debug platform phy** privileged EXEC command to enable debugging of PHY driver information. Use the **no** form of this command to disable debugging.

- debug platform phy {automdix | cablediag | dual-purpose | flcd {configure | ipc | iter | trace} |
  flowcontrol | forced | init-seq | link-status | read | sfp | show-controller | speed | write |
  xenpak }
- no debug platform phy {automdix | cablediag | dual-purpose | flcd {configure | ipc | iter | trace} | flowcontrol | forced | init-seq | link-status | read | sfp | show-controller | speed | write | xenpak}

Syntax Description	automdix	Display PHY automatic medium-dependent interface crossover (auto-MDIX) debug messages.
	cablediag	Display PHY cable-diagnostic debug messages.
	dual-purpose	Display PHY dual-purpose event debug messages.
	flcd {configure   ipc	Display PHY FLCD debug messages. The keywords have these meanings:
	iter   trace }	• <b>configure</b> —Display PHY configure debug messages.
		<ul> <li>ipc—Display Interprocess Communication Protocol (IPC) debug messages.</li> <li>iter—Display iter debug messages.</li> </ul>
		• <b>trace</b> —Display trace debug messages.
	flowcontrol	Display PHY flowcontrol debug messages.
	forced	Display PHY forced-mode debug messages.
	init-seq	Display PHY initialization-sequence debug messages.
	link-status	Display PHY link-status debug messages.
	read	Display PHY-read debug messages.
	sfp	Display PHY small form-factor pluggable (SFP) modules debug messages.
	show-controller	Display PHY show-controller debug messages.
	speed	Display PHY speed-change debug messages.
	write	Display PHY-write debug messages.
	xenpak	Display PHY XENPAK debug messages
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification

<b>Command History</b>	Release	Modification
	12.2(44)EX	This command was introduced.

**Usage Guidelines** The **undebug platform phy** command is the same as the **no debug platform phy** command.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

#### debug platform pm

Use the **debug platform pm** privileged EXEC command to enable debugging of the platform-dependent port manager software module. Use the **no** form of this command to disable debugging.

debug platform pm {all | counters | errdisable | etherchnl | exceptions | hpm-events | idb-events | if-numbers | ios-events | link-status | platform | pm-events | pm-span | pm-vectors [detail] | rpc [general | oper-info | state | vectors | vp-events] | soutput-vectors | sync | vlans}

no debug platform pm {all | counters | errdisable | etherchnl | exceptions | hpm-events | idb-events | if-numbers | ios-events | link-status | platform | pm-events | pm-span | pm-vectors [detail] | rpc [general | oper-info | state | vectors | vp-events] | soutput-vectors | sync | vlans}

## debug platform port-asic

Use the **debug platform port-asic** privileged EXEC command to enable debugging of the port application-specific integrated circuit (ASIC) driver. Use the **no** form of this command to disable debugging.

debug platform port-asic {interrupt | periodic | read | write}

no debug platform port-asic {interrupt | periodic | read | write}

interrupt	Display port-ASIC interrupt-related function debug messages.
periodic	Display port-ASIC periodic-function-call debug messages.
read	Display port-ASIC read debug messages.
write	Display port-ASIC write debug messages.
Though visible in the c	ommand-line help strings, the <b>stack</b> keyword is not supported.
Debugging is disabled.	
Privileged EXEC	
Release	Modification
12.2(44)EX	This command was introduced.
The <b>undebug platform</b>	a port-asic command is the same as the no debug platform port-asic command.
Command	Description
show debugging	Displays information about the types of debugging that are enabled.
	periodic         read         write         Though visible in the c         Debugging is disabled.         Privileged EXEC         Release         12.2(44)EX         The undebug platform         Command

#### debug platform port-security

Use the **debug platform port-security** privileged EXEC command to enable debugging of platform-dependent port-security information. Use the **no** form of this command to disable debugging.

debug platform port-security {add | aging | all | delete | errors | rpc | warnings}

no debug platform port-security {add | aging | all | delete | errors | rpc | warnings}

elease 2.2(44)EX ne undebug platform j mmand.	Modification         This command was introduced.         port-security command is the same as the no debug platform port-security         Description

	Display secure address addition debug messages. Display secure address aging debug messages.
	crors oc arnings ebugging is disabled.

#### debug platform qos-acl-tcam

Use the **debug platform qos-acl-tcam** privileged EXEC command to enable debugging of the quality of service (QoS) and access control list (ACL) ternary content addressable memory (TCAM) manager software. Use the **no** form of this command to disable debugging.

debug platform qos-acl-tcam {all | ctcam | errors | labels | mask | rpc | tcam}

no debug platform qos-acl-tcam {all | ctcam | errors | labels | mask | rpc | tcam}

Syntax Description	all	Display all QoS and ACL TCAM (QATM) manager debug messages.
	ctcam	Display Cisco TCAM (CTCAM) related-events debug messages.
	errors	Display QATM error-related-events debug messages.
	labels	Display QATM label-related-events debug messages.
	mask	Display QATM mask-related-events debug messages.
	rpc	Display QATM remote procedure call (RPC) related-events debug messages.
	tcam	Display QATM TCAM-related events debug messages.
efaults	Debugging is disat	pled.
ommand Modes	Privileged EXEC	
command History	Release	Modification
	12.2(44)EX	This command was introduced.

#### debug platform resource-manager

Use the **debug platform resource-manager** privileged EXEC command to enable debugging of the resource manager software. Use the **no** form of this command to disable debugging.

debug platform resource-manager {all | dm | erd | errors | madmed | sd | stats | vld}

no debug platform resource-manager {all | dm | erd | errors | madmed | sd | stats | vld}

Syntax Description	all	Display all resource manager debug messages.
	dm	Display destination-map debug messages.
	erd	Display equal-cost-route descriptor-table debug messages.
	errors	Display error debug messages.
	madmed	Display the MAC address descriptor table and multi-expansion descriptor table debug messages.
	sd	Display the station descriptor table debug messages.
	stats	Display statistics debug messages.
	vld	Display the VLAN-list descriptor debug messages.
Defaults	Debugging is disa	blad
Donanto	Debugging is usa	iorea.
	Privileged EXEC	iorea.
Command Modes		Modification
Command Modes	Privileged EXEC	
Command Modes	Privileged EXEC          Release         12.2(44)EX	Modification         This command was introduced.         tform resource-manager command is the same as the no debug platform
Command Modes Command History	Privileged EXEC          Release         12.2(44)EX	Modification         This command was introduced.         tform resource-manager command is the same as the no debug platform

#### debug platform snmp

Use the **debug platform snmp** privileged EXEC command to enable debugging of the platform-dependent Simple Network Management Protocol (SNMP) software. Use the **no** form of this command to disable debugging.

#### debug platform snmp

no debug platform snmp

Syntax Description	This command has no	arguments or keywords.
--------------------	---------------------	------------------------

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(44)EX	This command was introduced.

**Usage Guidelines** The **undebug platform snmp** command is the same as the **no debug platform snmp** command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

# debug platform span

Use the **debug platform span** privileged EXEC command to enable debugging of the platform-dependent Switched Port Analyzer (SPAN) software. Use the **no** form of this command to disable debugging.

debug platform span

no debug platform span

Syntax Description	This command has	no arguments or keywords.
--------------------	------------------	---------------------------

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(44)EX	This command was introduced.

**Usage Guidelines** The **undebug platform span** command is the same as the **no debug platform span** command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

## debug platform supervisor-asic

Use the **debug platform supervisor-asic** privileged EXEC command to enable debugging of the supervisor application-specific integrated circuit (ASIC). Use the **no** form of this command to disable debugging.

debug platform supervisor-asic {all | errors | receive | send}

no debug platform supervisor-asic {all | errors | receive | send}

Syntax Description	all	Display all supervisor-ASIC event debug messages.
	errors	Display the supervisor-ASIC error debug messages.
	receive	Display the supervisor-ASIC receive debug messages.
	send	Display the supervisor-ASIC send debug messages.
Defaults	Debugging is disabled	ł.
Command Modes	Privileged EXEC

#### debug platform sw-bridge

Use the **debug platform sw-bridge** privileged EXEC command to enable debugging of the software bridging function. Use the **no** form of this command to disable debugging.

debug platform sw-bridge {broadcast | control | multicast | packet | unicast}

no debug platform sw-bridge {broadcast | control | multicast | packet | unicast}

Syntax Description	broadcast	Display broadcast-data debug messages.
	control	Display protocol-packet debug messages.
	multicast	Display multicast-data debug messages.
	packet	Display sent and received data debug messages.
	unicast	Display unicast-data debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
Usage Guidelines	The <b>undebug platform</b> command.	sw-bridge command is the same as the no debug platform sw-bridge
Related Commands	Command	Description

#### debug platform tcam

Use the **debug platform tcam** privileged EXEC command to enable debugging of ternary content addressable memory (TCAM) access and lookups. Use the **no** form of this command to disable debugging.

debug platform tcam {log | read | search | write}

debug platform tcam log l2 {acl {input | output} | local | qos}

debug platform tcam log l3 {acl {input | output} | ipv6 {acl {input | output} | local | qos | secondary} | local | qos | secondary}

debug platform tcam read {reg | ssram | tcam}

debug platform tcam search

debug platform tcam write {forw-ram | reg | tcam}

no debug platform tcam {log | read | search | write}

no debug platform tcam log l2 {acl {input | output} | local | qos}

no debug platform tcam log l3 {acl {input | output} | ipv6 {acl {input | output} | local | qos | secondary} | local | qos | secondary}

no debug platform tcam read {reg | ssram | tcam}

no debug platform tcam search

no debug platform tcam write {forw-ram | reg | tcam}

Syntax Description	log l2 {acl {input   output}   local   qos}	Display Layer 2 field-based CAM look-up type debug messages. The keywords have these meanings:
		• acl {input   output}—Display input or output ACL look-up debug messages.
		• <b>local</b> —Display local forwarding look-up debug messages.
		• <b>qos</b> —Display classification and quality of service (QoS) look-up debug messages.

	13 {acl {input   output}   ipv6 {acl {input   output}   local   qos   secondary}   local   qos   secondary}	Display Layer 3 field-based CAM look-up type debug messages. The keywords have these meanings:
		• acl {input   output}—Display input or output ACL look-up debug messages.
		• <b>ipv6</b> { <b>acl</b> { <b>input</b>   <b>output</b> }   <b>local</b>   <b>qos</b>   secondary}—Display IPv6-based look-up debug messages. Options include displaying input or output ACL look-up, local forwarding look-up, classification and QoS look-up, or secondary forwarding look-up debug messages.
		• local—Display local forwarding look-up debug messages.
		• <b>qos</b> —Display classification and quality of service (QoS) look-up debug messages.
		<ul> <li>secondary—Display secondary forwarding look-up debug messages.</li> </ul>
	read {reg   ssram   tcam}	Display TCAM-read debug messages. The keywords have these meanings:
		• <b>reg</b> —Display TCAM-register read debug messages.
		• <b>ssram</b> —Display synchronous static RAM (SSRAM)-read debug messages.
		• tcam—Display TCAM-read debug messages.
	search	Display supervisor-initiated TCAM-search results debug messages.
	write {forw-ram   reg   tcam}	Display TCAM-write debug messages. The keywords have these meanings:
		forw-ram—Display forwarding-RAM write debug messages.
		reg—Display TCAM-register write debug messages.
		tcam—Display TCAM-write debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release M	odification
-	12.2(44)EX Th	is command was introduced.
		pport for the <b>13 ipv6 {acl {input   output}   local   qos   secondary }</b> , the <b>local</b> , and the <b>13 secondary</b> keywords was added for switches running the

Usage Guidelines

The undebug platform tcam command is the same as the no debug platform tcam command.

IP services image.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

#### debug platform udld

Use the **debug platform udld** privileged EXEC command to enable debugging of the platform-dependent UniDirectional Link Detection (UDLD) software. Use the **no** form of this command to disable debugging.

debug platform udld [all | error | rpc {events | messages}]

no debug platform udld [all | error | rpc {events | messages}]

Syntax Description	all	(Optional) Display all UDLD debug messages.
	error	(Optional) Display error condition debug messages.
	rpc {events   messages}	(Optional) Display UDLD remote procedure call (RPC) debug messages The keywords have these meanings:
		<ul> <li>events—Display UDLD RPC events.</li> </ul>
		• messages—Display UDLD RPC messages.
Defaults	Debugging is disabled.	
ommand Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
Usage Guidelines	The undebug platform u	udld command is the same as the no debug platform udld command.
	Command	Description
Related Commands	oonnana	

## debug platform vlan

Use the **debug platform vlan** privileged EXEC command to enable debugging of the VLAN manager software. Use the **no** form of this command to disable debugging.

debug platform vlan {errors | mvid | rpc}

no debug platform vlan {errors | mvid | rpc}

Syntax Description	errors	Display VLAN error debug messages.
	mvid	Display mapped VLAN ID allocations and free debug messages.
	rpc	Display remote procedure call (RPC) debug messages.
Defaults	Debugging is disabled	L.
ommand Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
Usage Guidelines	The undebug platform	<b>m vlan</b> command is the same as the <b>no debug platform vlan</b> command.
Related Commands	Command	Description

#### debug pm

Use the **debug pm** privileged EXEC command to enable debugging of port manager (PM) activity. The port manager is a state machine that controls all the logical and physical interfaces. All features, such as VLANs, UniDirectional Link Detection (UDLD), and so forth, work with the port manager to provide switch functions. Use the **no** form of this command to disable debugging.

- debug pm {all | assert | card | etherchnl | hatable | messages | port | redundancy | registry | sm | span | split | vlan | vp}
- no debug pm {all | assert | card | etherchnl | hatable | messages | port | redundancy | registry | sm | span | split | vlan | vp}

Syntax Description	all	Display all PM debug messages.
	assert	Display assert debug messages.
	card	Display line-card related-events debug messages.
	etherchnl	Display EtherChannel related-events debug messages.
	hatable	Display Host Access Table events debug messages.
	messages	Display PM debug messages.
	port	Display port related-events debug messages.
	redundancy	Display redundancy debug messages.
	registry	Display PM registry invocation debug messages.
	sm	Display state-machine related-events debug messages.
	span	Display spanning-tree related-events debug messages.
	split	Display split-processor debug messages.
	vlan	Display VLAN related-events debug messages.
	vp	Display virtual port related-events debug messages.

Though visible in the command-line help strings, the scp and pvlan keywords are not supported.

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Release

12.2(44)EX

#### Command History

Though visible in the command-fine help strings, the sep and pvian keywords are not support

Modification

This command was introduced.

**Usage Guidelines** The **undebug pm** command is the same as the **no debug pm** command.

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

B-73

## debug port-security

Use the **debug port-security** privileged EXEC command to enable debugging of the allocation and states of the port security subsystem. Use the **no** form of this command to disable debugging.

debug port-security

no debug port-security

Syntax Description	This command has no arguments or keywords.
--------------------	--

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(44)EX	This command was introduced.

**Usage Guidelines** The **undebug port-security** command is the same as the **no debug port-security** command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show port-security	Displays port-security settings for an interface or for the switch.

#### debug profinet alarm

Use the **debug profinet alarm** privileged EXEC command to enable debugging of PROFINET alarms. Use the **no** form of this command to disable PROFINET debugging.

debug profinet alarm

no debug profinet alarm

- Syntax Description This command has no arguments or keywords.
- **Defaults** PROFINET debugging is not configured.
- Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(52)SE	This command was introduced.

Usage GuidelinesThe undebug profinet alarm command is the same as the no debug profinet alarm command.Use this command only under the direction of a Cisco Technical Support engineer.When you use this command, use Telnet to access the Cisco IOS software command-line interface (CLI),<br/>using Ethernet rather than a serial port.

#### **Examples** This example shows how to enable debugging of PROFINET alarms: Switch# debug profinet alarm

<b>Related Commands</b>	Command	Description
	debug profinet cyclic	Displays the function calls related to sending and receiving PROFINET cyclic packets.
	debug profinet error	Enables debugging of the PROFINET session errors.
	debug profinet packet	Enables debugging of the PROFINET packets.
	debug profinet platform	Enables debugging of the interaction between the Cisco IOS software and PROFINET.
	debug profinet topology	Displays the received PROFINET topology packets.
	debug profinet trace	Displays a group of traced debug output logs.
	profinet	Enables the PROFINET feature on the switch.

Command	Description
show debugging	Displays information about the types of debugging that are enabled.
show profinet	Displays details of the PROFINET session on the switch.

## debug profinet cyclic

Use the **debug profinet cyclic** privileged EXEC command to display the function calls related to sending and receiving PROFINET cyclic packets. Use the **no** form of this command to disable PROFINET debugging.

debug profinet cyclic

no debug profinet cyclic

- **Syntax Description** This command has no arguments or keywords.
- **Defaults** PROFINET debugging is not configured.
- Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(52)SE	This command was introduced.

#### **Usage Guidelines** The **undebug profinet cyclic** command is the same as the **no debug profinet cyclic** command.

Use this command only under the direction of a Cisco Technical Support engineer.

When you use this command, use Telnet to access the Cisco IOS software command-line interface (CLI), using Ethernet rather than a serial port.

Examples This example shows how to display information about the time-cycle-based PROFINET Ethernet frames:
Switch# debug profinet cyclic

<b>Related Commands</b>	Command	Description
	debug profinet alarm	Enables debugging of the PROFINET alarms.
	debug profinet error	Enables debugging of the PROFINET session errors.
	debug profinet packet	Enables debugging of the PROFINET packets.
	debug profinet platform	Enables debugging of the interaction between the Cisco IOS software and PROFINET.
	debug profinet topology	Displays the received PROFINET topology packets.
	debug profinet trace	Displays a group of traced debug output logs.
	profinet	Enables the PROFINET feature on the switch.

Command	Description
show debugging	Displays information about the types of debugging that are enabled.
show profinet	Displays details of the PROFINET session on the switch.

## debug profinet error

Use the **debug profinet error** privileged EXEC command to enable debugging of PROFINET session errors. Use the **no** form of this command to disable PROFINET debugging.

debug profinet error

no debug profinet error

- **Syntax Description** This command has no arguments or keywords.
- **Defaults** PROFINET debugging is not configured.
- Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(52)SE	This command was introduced.

Usage GuidelinesThe undebug profinet error command is the same as the no debug profinet error command.Use this command only under the direction of a Cisco Technical Support engineer.When you use this command, use Telnet to access the Cisco IOS software command-line interface (CLI),<br/>using Ethernet rather than a serial port.

#### **Examples** This example shows how to enable debugging of PROFINET errors: Switch# debug profinet error

Related Commands	Command	Description
	debug profinet alarm	Enables debugging of the PROFINET alarms.
	debug profinet cyclic	Displays the function calls related to sending and receiving PROFINET cyclic packets.
	debug profinet packet	Enables debugging of the PROFINET packets.
	debug profinet platform	Enables debugging of the interaction between the Cisco IOS software and PROFINET.
	debug profinet topology	Displays the received PROFINET topology packets.
	debug profinet trace	Displays a group of traced debug output logs.
	profinet	Enables the PROFINET feature on the switch.

Command	Description	
show debugging	Displays information about the types of debugging that are enabled.	
show profinet	Displays details of the PROFINET session on the switch.	

## debug profinet packet

Use the **debug profinet packet** privileged EXEC command to enable debugging of the PROFINET feature. Use the **no** form of this command to disable PROFINET debugging.

debug profinet packet {ethernet | udp}

no debug profinet packet {ethernet | udp}

Syntax Description	ethernet E	nable debugging of PROFINET Ethernet packets.
	udp E	nable debugging of PROFINET UDP packets.
Defaults	PROFINET debugging i	s not configured.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(52)SE	This command was introduced.
Usage Guidelines	The <b>undebug profinet packet</b> command is the same as the <b>no debug profinet packet</b> command.	
	Use this command only under the direction of a Cisco Technical Support engineer.	
	using Ethernet rather that	hand, use Telnet to access the Cisco IOS software command-line interface (CLI) an a serial port.

Switch# debug profinet platform

Related Commands	Command	Description
	debug profinet alarm	Enables debugging of the PROFINET alarms.
	debug profinet cyclic	Displays the function calls related to sending and receiving PROFINET cyclic packets.
	debug profinet error	Enables debugging of the PROFINET session errors.
	debug profinet packet	Enables debugging of the PROFINET packets.
	debug profinet topology	Displays the received PROFINET topology packets.
	debug profinet trace	Displays a group of traced debug output logs.
	profinet	Enables the PROFINET feature on the switch.

Command	Description	
show debugging	Displays information about the types of debugging that are enabled.	
show profinet	Displays details of the PROFINET session on the switch.	

## debug profinet topology

Use the **debug profinet topology** privileged EXEC command to display information about the Link Layer Discovery Protocol (LLDP) and Simple Network Management Protocol (SNMP) packets used in PROFINET topology discovery. Use the **no** form of this command to disable PROFINET debugging.

debug profinet topology

no debug profinet topology

Syntax Description	This command has no arguments or keywords.
--------------------	--

- **Defaults** PROFINET debugging is not configured.
- Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(52)SE	This command was introduced.

#### **Usage Guidelines** The **undebug profinet topology** command is the same as the **no debug profinet topology** command.

Use this command only under the direction of a Cisco Technical Support engineer.

When you use this command, use Telnet to access the Cisco IOS software command-line interface (CLI), using Ethernet rather than a serial port.

 Examples
 This example shows how to enable debugging of PROFINET topology discovery:

 Switch# debug profinet topology

<b>Related Commands</b>	Command	Description
	debug profinet alarm	Enables debugging of the PROFINET alarms.
	debug profinet cyclic	Displays the function calls related to sending and receiving PROFINET cyclic packets.
	debug profinet error	Enables debugging of the PROFINET session errors.
	debug profinet packet	Enables debugging of the PROFINET packets.
	debug profinet platform	Enables debugging of the interaction between the Cisco IOS software and PROFINET.
	debug profinet trace	Displays a group of traced debug output logs.
	profinet	Enables the PROFINET feature on the switch.

Command	Description	
show debugging	Displays information about the types of debugging that are enabled.	
show profinet	Displays details of the PROFINET session on the switch.	

### debug profinet trace

Use the **debug profinet trace** privileged EXEC command to display a group of traced debug output logs. Use the **no** form of this command to disable PROFINET debugging.

debug profinet trace

no debug profinet trace

- Syntax Description This command has no arguments or keywords.
- **Defaults** PROFINET debugging is not configured.
- Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(52)SE	This command was introduced.

Usage GuidelinesThe undebug profinet trace command is the same as the no debug profinet trace command.Use this command only under the direction of a Cisco Technical Support engineer.When you use this command, use Telnet to access the Cisco IOS software command-line interface (CLI),<br/>using Ethernet rather than a serial port.

#### **Examples** This example shows how to display a group of traced debug output logs: Switch# debug profinet trace

Related Commands	Command	Description
	debug profinet alarm	Enables debugging of the PROFINET alarms.
	debug profinet cyclic	Displays the function calls related to sending and receiving PROFINET cyclic packets.
	debug profinet error	Enables debugging of the PROFINET session errors.
	debug profinet packet	Enables debugging of the PROFINET packets.
	debug profinet platform	Enables debugging of the interaction between the Cisco IOS software and PROFINET.
	debug profinet topology	Displays the received PROFINET topology packets.
	profinet	Enables the PROFINET feature on the switch.

Command	Description
show debugging	Displays information about the types of debugging that are enabled.
show profinet	Displays details of the PROFINET session on the switch.

## debug ptp

Use the **debug ptp** privileged EXEC command to enable debugging of the Precision Time Protocol (PTP) activity. Use the **no** form of this command to disable debugging.

debug ptp {bmc | clock-correction | errors | event | messages | error | transparent-clock}

no debug ptp {bmc | clock-correction | errors | event | messages | error | transparent-clock}

Syntax Description	bmc	Display the PTP best master clock algorithm debug messages.
	clock-correction	Display the PTP clock correction debug messages.
	error	Display the PTP error debug messages.
	event	Display the PTP state event debug messages.
	messages	Display the PTP debug messages.
	transparent-clock	Display the PTP transparent-clock debug messages.
Command Default	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(46)SE1	This command was introduced.
		This command was infoduced.
Usage Guidelines		nd is the same as the <b>no debug ptp</b> command.
Usage Guidelines Related Commands		
<b>.</b>	The <b>undebug ptp</b> comman	nd is the same as the <b>no debug ptp</b> command. <b>Description</b>
<b>.</b>	The <b>undebug ptp</b> comman	nd is the same as the <b>no debug ptp</b> command.           Description           tion)         Sets the PTP clock properties.

**B-89** 

## debug qos-manager

Use the **debug qos-manager** privileged EXEC command to enable debugging of the quality of service (QoS) manager software. Use the **no** form of this command to disable debugging.

debug qos-manager {all | event | verbose}

no debug qos-manager {all | event | verbose}

Syntax Description	all	Display all QoS-manager debug messages.
	event	Display QoS-manager related-event debug messages.
	verbose	Display QoS-manager detailed debug messages.
efaults	Debugging is disable	ed.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
	12.2(44)EX	This command was introduced.
Usage Guidelines	The <b>undebug qos-n</b>	nanager command is the same as the no debug qos-manager command.
Usage Guidelines Related Commands	The undebug qos-n	nanager command is the same as the <b>no debug qos-manager</b> command. Description

## debug spanning-tree

Use the **debug spanning-tree** privileged EXEC command to enable debugging of spanning-tree activities. Use the **no** form of this command to disable debugging.

debug spanning-tree {all | backbonefast | bpdu | bpdu-opt | config | etherchannel | events | exceptions | general | mstp | pvst+ | root | snmp | switch | synchronization | uplinkfast}

no debug spanning-tree {all | backbonefast | bpdu | bpdu-opt | config | etherchannel | events | exceptions | general | mstp | pvst+ | root | snmp | switch | synchronization | uplinkfast}

	all	Display all spanning-tree debug messages.
	backbonefast	Display BackboneFast-event debug messages.
	bpdu	Display spanning-tree bridge protocol data unit (BPDU) debug messages.
	bpdu-opt	Display optimized BPDU handling debug messages.
	config	Display spanning-tree configuration change debug messages.
	etherchannel	Display EtherChannel-support debug messages.
	events	Display spanning-tree topology event debug messages.
	exceptions	Display spanning-tree exception debug messages.
	general	Display general spanning-tree activity debug messages.
	mstp	Debug Multiple Spanning Tree Protocol events.
	pvst+	Display per-VLAN spanning-tree plus (PVST+) event debug messages.
	root	Display spanning-tree root-event debug messages.
	snmp	Display spanning-tree Simple Network Management Protocol (SNMP) handling debug messages.
	synchronization	Display the spanning-tree synchronization event debug messages.
	switch	Display switch shim command debug messages. This shim is the software module that is the interface between the generic Spanning Tree Protocol (STP) code and the platform-specific code of various switch platforms.
	uplinkfast	Display UplinkFast-event debug messages.
	•	
Note		e command-line help strings, the <b>csuf/csrt</b> keyword is not supported.
Note Defaults		e command-line help strings, the <b>csuf/csrt</b> keyword is not supported.
	Though visible in th	e command-line help strings, the <b>csuf/csrt</b> keyword is not supported.
Defaults	Though visible in th Debugging is disable	e command-line help strings, the <b>csuf/csrt</b> keyword is not supported.

**Usage Guidelines** The **undebug spanning-tree command is the** same as the **no debug spanning-tree** command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show spanning-tree	Displays spanning-tree state information.

## debug spanning-tree backbonefast

Use the **debug spanning-tree backbonefast** privileged EXEC command to enable debugging of spanning-tree BackboneFast events. Use the **no** form of this command to disable debugging.

debug spanning-tree backbonefast [detail | exceptions]

no debug spanning-tree backbonefast [detail | exceptions]

Syntax Description	detail (O	ptional) Display detailed BackboneFast debug messages.
	exceptions (O	ptional) Display spanning-tree BackboneFast-exception debug messages.
Defaults	Debugging is disabled	1.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
Usage Guidelines	The <b>undebug spanni</b> <b>backbonefast</b> comma	<b>ng-tree backbonefast</b> command is the same as the <b>no debug spanning-tree</b> and.
Related Commands	Command	Description
Related Commands	Commanu	
Related Commands	show debugging	Displays information about the types of debugging that are enabled.

## debug spanning-tree bpdu

Use the **debug spanning-tree bpdu** privileged EXEC command to enable debugging of sent and received spanning-tree bridge protocol data units (BPDUs). Use the **no** form of this command to disable debugging.

debug spanning-tree bpdu [receive | transmit]

no debug spanning-tree bpdu [receive | transmit]

Syntax Description	receive (Opt	tional) Display the nonoptimized path for received BPDU debug messages.
	transmit (Opt	tional) Display the nonoptimized path for sent BPDU debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
Usage Guidelines	The <b>undebug spannin</b> command.	g-tree bpdu command is the same as the no debug spanning-tree bpdu
Related Commands	Command	Description
Related Commands	Command show debugging	DescriptionDisplays information about the types of debugging that are enabled.

## debug spanning-tree bpdu-opt

Use the **debug spanning-tree bpdu-opt** privileged EXEC command to enable debugging of optimized spanning-tree bridge protocol data units (BPDUs) handling. Use the **no** form of this command to disable debugging.

debug spanning-tree bpdu-opt [detail | packet]

no debug spanning-tree bpdu-opt [detail | packet]

Syntax Description	detail (Op	tional) Display detailed optimized BPDU-handling debug messages.
	packet (Op	tional) Display packet-level optimized BPDU-handling debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
Usage Guidelines	The <b>undebug spannin</b> command.	g-tree bpdu-opt command is the same as the no debug spanning-tree bpdu-opt
Usage Guidelines Related Commands	• •	g-tree bpdu-opt command is the same as the no debug spanning-tree bpdu-opt Description
	command.	

## debug spanning-tree mstp

Use the **debug spanning-tree mstp** privileged EXEC command to enable debugging of the Multiple Spanning Tree Protocol (MSTP) software. Use the **no** form of this command to disable debugging.

debug spanning-tree mstp {all | boundary | bpdu-rx | bpdu-tx | errors | flush | init | migration | pm | proposals | region | roles | sanity\_check | sync | tc | timers}

no debug spanning-tree mstp {all | boundary | bpdu-rx | bpdu-tx | errors | flush | init | migration | pm | proposals | region | roles | sanity\_check | sync | tc | timers}

Syntax Description	all	Enable all the debugging messages.
	boundary	Debug flag changes at these boundaries:
		• An multiple spanning-tree (MST) region and a single spanning-tree region running Rapid Spanning Tree Protocol (RSTP)
		• An MST region and a single spanning-tree region running 802.1D
		• An MST region and another MST region with a different configuration
	bpdu-rx	Debug the received MST bridge protocol data units (BPDUs).
	bpdu-tx	Debug the sent MST BPDUs.
	errors	Debug MSTP errors.
	flush	Debug the port flushing mechanism.
	init	Debug the initialization of the MSTP data structures.
	migration	Debug the protocol migration state machine.
	pm	Debug MSTP port manager events.
	proposals	Debug handshake messages between the designated switch and the root switch.
	region	Debug the region synchronization between the switch processor (SP) and the route processor (RP).
	roles	Debug MSTP roles.
	sanity_check	Debug the received BPDU sanity check messages.
	sync	Debug the port synchronization events.
	tc	Debug topology change notification events.
	timers	Debug the MSTP timers for start, stop, and expire events.
Defaults	Debugging is di	sabled.
Command Modes	Privileged EXE	C
Command History	Release	Modification
-	12.2(44)EX	This command was introduced.

# **Usage Guidelines** The **undebug spanning-tree mstp** command is the same as the **no debug spanning-tree mstp** command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show spanning-tree	Displays spanning-tree state information.

## debug spanning-tree switch

Use the **debug spanning-tree switch** privileged EXEC command to enable debugging of the software interface between the Spanning Tree Protocol (STP) software module and the port manager software module. Use the **no** form of this command to disable debugging.

debug spanning-tree switch {all | errors | flush | general | helper | pm | rx {decode | errors | interrupt | process} | state | tx [decode] | uplinkfast}

no debug spanning-tree switch {all | errors | flush | general | helper | pm | rx {decode | errors | interrupt | process} | state | tx [decode] | uplinkfast}

errors		
	Display debug messages for the interface between the spanning-tree software	
	module and the port manager software module.	
flush	Display debug messages for the shim flush operation.	
general	Display general event debug messages.	
helper	Display spanning-tree helper-task debug messages. Helper tasks handle bulk spanning-tree updates.	
pm	Display port-manager event debug messages.	
rx	Display received bridge protocol data unit (BPDU) handling debug messages. The keywords have these meanings:	
	• <b>decode</b> —Display decoded received packets.	
	• errors—Display receive error debug messages.	
	• interrupt—Display interrupt service request (ISR) debug messages.	
	• <b>process</b> —Display process receive BPDU debug messages.	
state	Display spanning-tree port state change debug messages;	
tx [decode]	Display sent BPDU handling debug messages. The keyword has this meaning:	
	• <b>decode</b> —(Optional) Display decoded sent packets.	
uplinkfast	Display uplinkfast packet transmission debug messages.	
Debugging is disabled.		
Release	Modification	
12.2(44)EX	This command was introduced.	
	helper pm rx state tx [decode] uplinkfast Debugging is d	

Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show spanning-tree	Displays spanning-tree state information.

## debug spanning-tree uplinkfast

Use the **debug spanning-tree uplinkfast** privileged EXEC command to enable debugging of spanning-tree UplinkFast events. Use the **no** form of this command to disable debugging.

debug spanning-tree uplinkfast [exceptions]

no debug spanning-tree uplinkfast [exceptions]

Syntax Description	exceptions (Opt	ional) Display spanning-tree UplinkFast-exception debug messages.
lefaults	Debugging is disabled.	
mmand Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
Jsage Guidelines Related Commands	The undebug spanning uplinkfast command. Command	g-tree uplinkfast command is the same as the no debug spanning-tree Description
-	uplinkfast command.	g-tree uplinkfast command is the same as the no debug spanning-tree           Description           Displays information about the types of debugging that are enabled.

#### debug sw-vlan

Use the **debug sw-vlan** privileged EXEC command to enable debugging of VLAN manager activities. Use the **no** form of this command to disable debugging.

debug sw-vlan {badpmcookies | cfg-vlan {bootup | cli} | events | ifs | management | mapping | notification | packets | redundancy | registries | vtp}

no debug sw-vlan {badpmcookies | cfg-vlan {bootup | cli} | events | ifs | management | mapping | notification | packets | redundancy | registries | vtp}

Syntax Description	badpmcookies	Display debug messages for VLAN manager incidents of bad port manager cookies.
	cfg-vlan {bootup   cli}	Display config-vlan debug messages. The keywords have these meanings:
		• <b>bootup</b> —Display messages when the switch is booting up.
		• <b>cli</b> —Display messages when the command-line interface (CLI) is in config-vlan mode.
	events	Display debug messages for VLAN manager events.
	ifs	See the <b>debug sw-vlan ifs</b> command.
	management	Display debug messages for VLAN manager management of internal VLANs.
	mapping	Display debug messages for VLAN mapping.
	notification	See the <b>debug sw-vlan notification</b> command.
	packets	Display debug messages for packet handling and encapsulation processes.
	redundancy	Display debug messages for VTP VLAN redundancy.
	registries	Display debug messages for VLAN manager registries.
	vtp	See the <b>debug sw-vlan vtp</b> command.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
	Release	Modification
Command History		

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show vlan	Displays the parameters for all configured VLANs or one VLAN (if the VLAN name or ID is specified) in the administrative domain.
	show vtp	Displays general information about VTP management domain, status, and counters.

### debug sw-vlan ifs

Use the **debug sw-vlan ifs** privileged EXEC command to enable debugging of the VLAN manager IOS file system (IFS) error tests. Use the **no** form of this command to disable debugging.

debug sw-vlan ifs {open {read | write} | read {1 | 2 | 3 | 4} | write}

```
no debug sw-vlan ifs {open {read | write} | read {1 | 2 | 3 | 4} | write}
```

	Display VI AN supress IEC file even exception debug successor. The
open {read   write}	Display VLAN manager IFS file-open operation debug messages. The keywords have these meanings:
	• read—Display VLAN manager IFS file-read operation debug messages.
	• write—Display VLAN manager IFS file-write operation debug messages.
read {1   2   3   4}	Display file-read operation debug messages for the specified error test $(1, 2, 3, $ or 4).
write	Display file-write operation debug messages.
Debugging is disabled.	
	write

#### Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(44)EX	This command was introduced.

**Usage Guidelines** The **undebug sw-vlan ifs** command is the same as the **no debug sw-vlan ifs** command.

When selecting the file read operation, Operation 1 reads the file header, which contains the header verification word and the file version number. Operation 2 reads the main body of the file, which contains most of the domain and VLAN information. Operation 3 reads type length version (TLV) descriptor structures. Operation 4 reads TLV data.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show vlan	Displays the parameters for all configured VLANs or one VLAN (if the VLAN name or ID is specified) in the administrative domain.

## debug sw-vlan notification

Use the **debug sw-vlan notification** privileged EXEC command to enable debugging of the activation and deactivation of Inter-Link Switch (ISL) VLAN IDs. Use the **no** form of this command to disable debugging.

debug sw-vlan notification {accfwdchange | allowedvlancfgchange | fwdchange | linkchange | modechange | pruningcfgchange | statechange}

no debug sw-vlan notification {accfwdchange | allowedvlancfgchange | fwdchange | linkchange | modechange | pruningcfgchange | statechange}

Syntax Description	accfwdchange	Display debug messages for VLAN manager notification of aggregated access interface spanning-tree forward changes.
	allowedvlancfgchange	Display debug messages for VLAN manager notification of changes to the allowed VLAN configuration.
	fwdchange	Display debug messages for VLAN manager notification of spanning-tree forwarding changes.
	linkchange	Display debug messages for VLAN manager notification of interface link-state changes.
	modechange	Display debug messages for VLAN manager notification of interface mode changes.
	pruningcfgchange	Display debug messages for VLAN manager notification of changes to the pruning configuration.
	statechange	Display debug messages for VLAN manager notification of interface state changes.
Defeute		
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
Usage Guidelines	The <b>undebug sw-vlan n</b> e command.	otification command is the same as the no debug sw-vlan notification
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show vlan	Displays the parameters for all configured VLANs or one VLAN (if the VLAN name or ID is specified) in the administrative domain.

## debug sw-vlan vtp

Use the **debug sw-vlan vtp** privileged EXEC command to enable debugging of the VLAN Trunking Protocol (VTP) code. Use the **no** form of this command to disable debugging.

debug sw-vlan vtp {events | packets | pruning [packets | xmit] | redundancy | xmit}

no debug sw-vlan vtp {events | packets | pruning | redundancy | xmit}

Syntax Description	events	Display debug messages for general-purpose logic flow and detailed VTP
		messages generated by the VTP_LOG_RUNTIME macro in the VTP code.
	packets	Display debug messages for the contents of all incoming VTP packets that have been passed into the VTP code from the IOS VTP platform-dependent layer, except for pruning packets.
	pruning [packets   xmit]	Display debug messages generated by the pruning segment of the VTP code. The keywords have these meanings:
		• <b>packets</b> —(Optional) Display debug messages for the contents of all incoming VTP pruning packets that have been passed into the VTP code from the IOS VTP platform-dependent layer.
		• <b>xmit</b> —(Optional) Display debug messages for the contents of all outgoing VTP packets that the VTP code requests the IOS VTP platform-dependent layer to send.
	redundancy	Display debug messages for VTP redundancy.
	xmit	Display debug messages for the contents of all outgoing VTP packets that the VTP code requests the IOS VTP platform-dependent layer to send, except for pruning packets.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
Usage Guidelines	The undebug sw-vlan vt	<b>p</b> command is the same as the <b>no debug sw-vlan vtp</b> command.
	appear. They are generate VTP_PRUNING_LOG_D	re entered after the <b>pruning keyword</b> , VTP pruning debugging messages of by the VTP_PRUNING_LOG_NOTICE, VTP_PRUNING_LOG_INFO, DEBUG, VTP_PRUNING_LOG_ALERT, and
	VTP_PRUNING_LOG_V	VARNING macros in the VTP pruning code.

**Cisco IE 3000 Switch Command Reference** 

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show vtp	Displays general information about VTP management domain, status, and counters.

## debug udld

Use the **debug udld** privileged EXEC command to enable debugging of the UniDirectional Link Detection (UDLD) feature. Use the **no** form of this command to disable UDLD debugging.

debug udld {events | packets | registries}

no debug udld {events | packets | registries}

Syntax Description	events	Display debug messages for UDLD process events as they occur.		
	packets	Display debug messages for the UDLD process as it receives packets from the		
		packet queue and tries to send them at the request of the UDLD protocol code.		
	registries	Display debug messages for the UDLD process as it processes registry calls from the UDLD process-dependent module and other feature modules.		
Defaults	Debugging is di	isabled.		
Command Modes	Privileged EXE	C		
Command History	Release	Modification		
	12.2(44)EX	This command was introduced.		
Usage Guidelines	For <b>debug udld</b> General UI State mach Program ac Neighbor c	add command is the same as the no debug udld command.         d events, these debugging messages appear:         DLD program logic flow         ine state changes         etions for the set and clear ErrDisable state         eache additions and deletions         of configuration commands		
	• Processing	of link-up and link-down indications		
	For <b>debug udld</b>	<b>d</b> packets, these debugging messages appear:		
	General pace	• General packet processing program flow on receipt of an incoming packet		
	• Indications of the contents of the various pieces of packets received (such as type length versions [TLVs]) as they are examined by the packet reception code			
	• Packet transmission attempts and the outcome			
		d registries, these categories of debugging messages appear:		

**Cisco IE 3000 Switch Command Reference** 

- State change indications from the port manager software
- MAC address registry calls

Command	Description           Displays information about the types of debugging that are enabled.           Displays UDLD administrative and operational status for all ports or the specified port.	
show debugging		
show udld		

B-109

## debug vqpc

Use the **debug vqpc** privileged EXEC command to enable debugging of the VLAN Query Protocol (VQP) client. Use the **no** form of this command to disable debugging.

debug vqpc [all | cli | events | learn | packet]

no debug vqpc [all | cli | events | learn | packet]

Syntax Description	all	(Optional) Display all VQP client debug messages.
	cli	(Optional) Display the VQP client command-line interface (CLI) debug
		messages.
	events	(Optional) Display VQP client event debug messages.
	learn	(Optional) Display VQP client address learning debug messages.
	packet	(Optional) Display VQP client packet information debug messages.
efaults	Debugging is disabl	ad
Flauns	Debugging is disabl	cu.
ommand Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(44)EX	This command was introduced.
Jsage Guidelines	The undebug vqpc	command is the same as the <b>no debug vqpc</b> command.
Related Commands	Command	Description
