## Post-Installation of the Cisco Business Edition 6000/7000 appliance

Complete the following procedure after the installation of Cisco Business Edition 6000/7000.

---

**Step 1**    [Licensing Applications, on page 1](#)

Follow these steps to perform the first-time setup and apply licenses for your UC applications.

**Step 2**    [Install Locales or Patches for Applications, on page 1](#)

Install new locales for your UC applications.

---

## Licensing Applications

Refer to the technical documentation of each application you are using for license logistics. Applications ship unlicensed. No application licenses are included with M6 appliance

## Install Locales or Patches for Applications

Complete the following tasks to install locales or patches for your application VMs.

**Note**

- Patches that are shipped with the appliance were current at the time of manufacture. Visit <http://software.cisco.com> for more recent updates.
  - For additional information on locales, refer to the Phone Locale Installers wiki at: <http://docwiki.cisco.com/wiki/Cucm-phone-locale-installers>.
-

**Procedure**

	<b>Command or Action</b>	<b>Purpose</b>
<b>Step 1</b>	<a href="#">Associate Bundled Locale or Patch ISO with Virtual Machines, on page 2</a>	Associate the locale or patch installer with the appropriate VM.
<b>Step 2</b>	<a href="#">Stop Services for Unity Connection, on page 2</a>	If you want to install locales or patches for Cisco Unity Connection, stop the services before you install the locale or patch.
<b>Step 3</b>	<a href="#">Install New Locales or Patches, on page 2</a>	Install the locale or patch on the VM.

**Associate Bundled Locale or Patch ISO with Virtual Machines****Before you begin**

Use this procedure to associate your locale or patch images with the appropriate application VM before starting the install process.

- 
- Step 1** In the VMware Embedded Host Client, select the Virtual Machine on which you want to install a new locale or patch.
- Step 2** Click **Edit**.
- Step 3** From **Virtual Hardware** tab, select **CD/DVD Drive**.
- Step 4** Select **Datastore ISO File** from **CD/DVD Drive 1** drop-down list.
- Step 5** **Browse** to the datastore and select the appropriate locale or patch ISO file.
- Step 6** Click **Select**.
- Step 7** In **CD/DVD Drive 1**, check the **Connect at power on** check box under the **Status**.
- Step 8** Repeat this procedure for each VM for which you want to install a new locale or patch.
- 

**Stop Services for Unity Connection**

Use this procedure if you want to install a new locale or patch for Cisco Unity Connection. You must stop services on the Unity Connection VM before you install a new locale or patch.

- 
- Step 1** Log in to Cisco Unity Connection Serviceability.
- Step 2** Choose **Tools > Service Management**.
- Step 3** Stop the following services:
- Connection Conversation Manager
  - Connection Mixer
- 

**Install New Locales or Patches**

Use this procedure to install a new locale or patch for any UC applications on your Business Edition appliance.

**Note**

- For Cisco Unified Communications Manager, you must install locales or patches for the publisher node and restart it before you install it for any subscriber nodes.
- You can install locales for Cisco Unified Communications Manager and Cisco Unity Connection in parallel.

- 
- Step 1** Log in to Cisco Unified Communications OS Administration.
- Step 2** Navigate to **Software Upgrades > Install/Upgrade**. The **Software Installation/Upgrade** window displays.
- Step 3** From the **Source** drop-down list box, choose **DVD/CD**.
- Step 4** Click **Next**.
- Step 5** Select the update file that you want to install and click **Next**.
- Step 6** After the download completes, click **Next**.
- Step 7** After the locale or patch installs, restart the appliance:
- a) Log in to the VMware Embedded Host Client
  - b) Right-click the VM on which you installed the locale or patch and select the **Guest OS > Restart**

---

**What to do next**

After you install your Cisco Business Edition 6000/7000 appliance, you can provision users, devices and configure features on the system. Refer to the administration guides of the applications you installed.
