Bug Severity Levels

Known defects, or bugs, have a severity level that indicates the priority of the defect. These release notes include the following bug types:

- All severity level 1 or 2 bugs
- Significant severity level 3 bugs
- All customer-found bugs except severity level 6 enhancement requests

| Severity Level | Description |
|----------------|---|
| 1 Catastrophic | Reasonably common circumstances cause the entire system to fail, or a major subsystem to stop working, or other devices on the network to be disrupted. No workarounds exist. |
| 2 Severe | Important functions are unusable and workarounds do not exist. Other functions and the rest of the network is operating normally. |
| 3 Moderate | Failures occur in unusual circumstances, or minor features do not work at all, or other failures occur but low-impact workarounds exist. This is the highest level for documentation bugs. |

| Severity Level | Description |
|----------------|---|
| 4 Minor | Failures occur under very unusual circumstances, but operation essentially recovers without intervention. Users do not need to install any workarounds and performance impact is tolerable. |
| 5 Cosmetic | Defects do not cause any detrimental effect on system functionality. |
| 6 Enhancement | Requests for new functionality or feature improvements. |

Search for Bugs

To search for bugs not listed here, use the Bug Search Tool.

Procedure

-
- Step 1** To access the Bug Search Tool, go to <https://tools.cisco.com/bugsearch/search>.
- Step 2** Sign in with your Cisco.com user ID and password.
- Step 3** To look for information about a specific problem, enter the bug ID number in the **Search for** field, then press **Enter**. Alternatively, you can search by product and release.
- For more information, select **Help** at the top right of the Bug Search page.
