show ap client-trace status

To view the AP client trace details, use the **show ap client-trace status** command.

```
show ap client-trace { events { all | mac word | system } | skb { drop-list | stats } | status }
```

Syntax Description

events	View client trace event information
all	Displays all client trace events
system	Displays all system events
mac	Displays client trace events for specific MAC address
<i>word</i>	Specific client MAC address
skb	Displays client trace SKB information
drop-list	Displays client trace SKB drop list information
stats	Displays client trace SKB statistics
status	Displays client trace configuration

Command Modes

Privileged EXEC (#)

Command History	Release Modification
	8.1.111.0 This command was introduced.

The following example shows how to view the AP client trace status:

```
cisco-ap# show ap client-trace status
```

show arp

To view the ARP table, use the **show arp** command.

show arp

Syntax Description	
	arp Shows ARP table

Command Modes	
	User EXEC (>) Privileged EXEC (#)

Command History	Release Modification
	8.1.111.0 This command was introduced.

The following example shows a sample output of the command:

```
cisco-ap# show arp

Address Age (min)      Hardware Addr
  9.11.8.1             0 84:80:2D:A0:D2:E6
  9.11.32.111          0 3C:77:E6:02:33:3F
```

show avc cft

To view the AVC client flow table information, use the **show avc cft** command.

show avc cft word

Syntax Description	
	<i>word</i> Client MAC address

Command Modes	
	User EXEC (>) Privileged EXEC (#)

Command History	Release Modification
	8.1.111.0 This command was introduced.

The following example shows how to view the AVC client flow table:

```
cisco-ap# show avc cft 02:35:2E:03:E0:F2
```

show avc nbar

To view the AVC NBAR information, use the **show avc nbar** command.

```
show avc nbar {statistics | build | version}
```

Syntax Description	
statistics	Displays NBAR build details
build	Displays NBAR statistics
version	Displays NBAR and PP version

Command Modes	
	User EXEC (>)
	Privileged EXEC (#)

Command History	Release Modification
	8.1.111.0 This command was introduced.

The following example shows how to view the AVC NBAR build information:

```
cisco-ap# show avc nbar build
```

show avc netflow flows

To list all the flows currently cached and to be sent to the Cisco WLC, use the **show avc netflow flows** command.

```
show avc netflow flows {download | upload}
```

Syntax Description	
download	Lists currently cached download flows
upload	Lists currently cached upload flows

Command Modes	
	User EXEC (>)
	Privileged EXEC (#)

Command History	Release	Modification
	8.1.111.0	This command was introduced.

The following example shows how to view all the currently cached flows:

```
cisco-ap# show avc netflow flows
```

show avc status

To list the AVC provisioning status per WLAN/VAP, use the **show avc status** command.

show avc status

Command Modes	User EXEC (>)	Privileged EXEC (#)

Command History	Release	Modification
	8.1.111.0	This command was introduced.

The following example shows how to view AVC provisioning status per WLAN/VAP:

```
cisco-ap# show avc status
```

```
VAP FNF-STATUS AVC-QOS-STATUS
0 Disabled Disabled
1 Disabled Disabled
2 Disabled Disabled
3 Disabled Disabled
4 Disabled Disabled
5 Disabled Disabled
6 Disabled Disabled
7 Disabled Disabled
8 Disabled Disabled
9 Disabled Disabled
10 Disabled Disabled
11 Disabled Disabled
12 Disabled Disabled
13 Disabled Disabled
14 Disabled Disabled
15 Disabled Disabled
```

show boot

To show boot attributes, use the **show boot** command.

show boot

Command Modes	User EXEC (>)
	Privileged EXEC (#)

Command History	Release Modification
	8.1.111.0 This command was introduced.

The following example shows how to view boot attributes:

```
cisco-ap# show boot

BOOT path-list:      part2
Console Baudrate:   9600
Enable Break:       yes
Manual Boot:        no
Memory Debug:       no
Crashkernel:
```

show capwap

To display CAPWAP options, use the **show capwap** command.

show capwap [ip | mcast | traffic]

Syntax Description	client	CAPWAP client information
	ids	CAPWAP ID information
	ip	CAPWAP IP configuration
	location	CAPWAP location information
	mcast	CAPWAP multicast information
	pnp	PNP information
	traffic	CAPWAP traffic information

Command Modes	User EXEC (>)
	Privileged EXEC (#)

Command History	Release Modification
	8.1.111.0 This command was introduced.

The following example shows how to view the CAPWAP multicast information:

```
cisco-ap# show capwap mcast
```

show capwap client

To display CAPWAP client information, use the **show capwap client** command.

```
show capwap client {callinfo info | detailrcb | rcb | config | ha | msginfo | timers | traffic}
```

Syntax Description	
callinfo <i>info</i>	CAPWAP client call information
detailrcb	CAPWAP client detailed RCB information
rcb	CAPWAP client RCB information
config	CAPWAP client config information
ha	CAPWAP client HA parameters
msginfo	CAPWAP client messages information
timers	CAPWAP client timers
traffic	CAPWAP client 802.11 traffic information

Command Modes	
	User EXEC (>)
	Privileged EXEC (#)

Command History	Release	Modification
	8.1.111.0	This command was introduced.

The following example shows how to view CAPWAP client traffic information:

```
cisco-ap# show capwap client traffic
```

show capwap client trace

To display CAPWAP trace, use the **show capwap client trace** command.

```
show capwap client trace {clear | delete | disable | save | start | stop}
```

Syntax Description	
clear	Clears trace
delete	Deletes trace
disable	Disables trace at boot
enable	Enables trace at boot

save Saves trace

start Starts trace

stop Stops trace

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release Modification

8.1.111.0 This command was introduced.

The following example shows how to view CAPWAP client trace:

```
cisco-ap# show capwap client trace
```

show capwap ids sig

To display CAPWAP ID signatures, use the **show capwap ids sig** command.

show capwap ids sig [**list** | **stats**]

Syntax Description

list Signature list entries

stats Signature attack statistics

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release Modification

8.1.111.0 This command was introduced.

The following example show how to view CAPWAP ID signature statistics:

```
cisco-ap# show capwap ids sig stats
```

show cdp

To display CDP options, use the **show cdp** command.

show cdp {**entry device** *device-name* | **inline_power** | **interface** | **neighbors** | **traffic**}

Syntax Description	entry device <i>device-name</i> Information for specific neighbor entry whose name you must enter
	inline_power Inline power negotiation information
	interface CDP interface status and configuration
	neighbors CDP neighbor entries
	traffic CDP statistics

Command Modes Privileged EXEC (#)

Command History	Release Modification
	8.1.111.0 This command was introduced.

The following example shows how to view information for a specific neighbor entry:

```
cisco-ap# show cdp entry device mydevice
```

show class-map

To display CPL class map, use the **show class-map** command.

show class-map

Command Modes User EXEC (>)
Privileged EXEC (#)

Command History	Release Modification
	8.1.111.0 This command was introduced.

The following example shows how to view CPL class map:

```
cisco-ap# show class-map
```

show cleanair debug

To display cleanair debug settings, use the **show cleanair debug** command.

show cleanair debug

Command Modes Privileged EXEC (#)

Command History	Release Modification
	8.1.111.0 This command was introduced.

The following example shows how to view CleanAir debug settings:

```
cisco-ap# show cleanair debug
```

show client statistics

To display client statistics, use the **show client statistics** command.

show client statistics *client-mac-address*

Syntax Description	
	<i>client-mac-address</i> MAC address of the client

Command Modes Privileged EXEC (#)

Command History	Release Modification
	8.1.111.0 This command was introduced.

The following example shows how to view client statistics:

```
cisco-ap# show client statistics 70:DB:98:66:34:FA
```

show clock

To display the system clock, use the **show clock** command.

show clock

Command Modes User EXEC (>)
Privileged EXEC (#)

Command History	Release Modification
	8.1.111.0 This command was introduced.

The following example shows how to view the system clock:

```
cisco-ap# show clock
```

show configuration

To display the contents of the non-volatile memory, use the **show configuration** command.

show configuration rlan

Command Modes	Privileged EXEC (#)
Syntax Description	rlan Displays the RLAN configuration.

Command History	Release	Modification
	8.1.111.0	This command was introduced.
	8.9	This command was enhanced by adding rlan parameter.
	8.10.112.0	The output of this command was enhanced to show the status of broken antenna detection.

The following example shows how to view the AP configuration details:

```
cisco-ap# show configuration

AP Name                : AP58AC.78DC.C2F0
Admin State            : Enabled
AP Mode                : FlexConnect
AP Submode             : Not Configured
Location               : default location
Reboot Reason          : Reload command
.
.
AP Link LAG status     : Disabled
AP WSA Mode            : Enabled
Vlan Interface         : Disabled

Broken antenna detection : Enabled (Global)
RSSI Failure Threshold : 40
Weak RSSI              : 60
Detection Time         : 12
If any broken antenna? : ALL
AP58AC.78DC.C2F0#
```

show controller ble

To view Bluetooth Low Energy radio interface parameter information, use the **show controller ble** command.

show controller ble *ble-interface-number* { **broadcast** | **counters** | **floor-tag** *floor-beacon-mac-addr* | **interface** | **local** | **scan** { **brief** | **detail** *floor-beacon-mac-addr* } | **timers**}

Syntax Description	<i>ble-interface-number</i>	BLE interface number that you must enter; Valid value is 0
	broadcast	Displays BLE broadcast summary information

counters	Displays BLE transport counters information
floor-tag <i>floor-beacon-mac-addr</i>	Displays sync data of the floor beacon whose MAC address you must specify
interface	Displays BLE interface summary information
local	Displays sync information of host BLE radio
scan brief	Displays brief BLE scan summary information
scan detail <i>floor-beacon-mac-addr</i>	Displays BLE scan summary information in detail; you must specify the floor beacon MAC address
timers	Displays BLE timers information

Command Modes

Privileged EXEC (#)

Command History**Release Modification**

8.7 This command was introduced.

Examples

To view the BLE timers information, use this command:

```
cisco-ap# show controller ble 0 timers

Timers
-----
Scan timer status       : Running
Scan timer interval    : 10 secs
Scan started at        : 0D:00H:04M:28S ago
Last scan done at      : 0D:00H:00M:06S ago
```

If scanning is working as expected, the 'Last scan done at' time should always be less than or equal to the scan interval set.

show controllers dot11Radio

To display dot11 interface information, use the **show controllers dot11Radio** command.

```
show controllers dot11Radio dot11-interface-no {antenna | { atfconfiguration | statistics } | bandselect
| client { client-mac-addr | all detail } | frequency | powercfg | powerreg | radiostats | rate | vlan
| wlan { wlan-id | all detail } }
```

Syntax Description

<i>dot11-interface-no</i>	Dot11Radio interface number.
atf configuration	Displays the AirTime Fairness configuration.
atf statistics	Displays the AirTime Fairness statistics.

bandselect	Displays the bandselect statistics.
antenna	Displays the antenna settings
client <i>client-mac-addr</i>	Displays the details of the client whose MAC address is specified.
detail	Displays the TID statistics for all the clients.
frequency	Displays the frequency information.
powercfg	Displays the configured power information.
powerreg	Displays the transmit power information.
radio-stats	Displays the radio statistics.
rate	Displays the rate information.
vlan	Displays the VLAN summary.
wlan <i>wlan-id</i>	Displays the VLAN/WLAN details of the WLAN ID specified.
detail	Displays the TID statistics for all the clients.

Command Modes User EXEC (>)

Command History

Release Modification

8.1.111.0 This command was introduced.

8.9 This command was enhanced by adding the **bandselect** , **client all detail** , **wlan** parameters.

The following example shows how to view 802.11 interface information for interface number 1:

```
cisco-ap# show controllers dot11Radio 1
```

show controllers nss status

To display NSS information, use the **show controllers nss status** command.

show controllers nss status

Command Modes User EXEC (>)

Privileged EXEC (#)

Command History

Release Modification

8.1.111.0 This command was introduced.

The following example shows how to view NSS information:

```
cisco-ap# show controllers nss status
```

show controllers wired

To view the wired interface, use the **show controllers wired** command.

show controllers wired *wired-interface-number*

Syntax Description	<i>wired-interface-number</i> Wired interface number from 0 to 3				
Command Modes	Privileged EXEC (#)				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>8.1.111.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	8.1.111.0	This command was introduced.
Release	Modification				
8.1.111.0	This command was introduced.				

The following example shows how to view information about the controllers' wired interface whose ID is 1:

```
cisco-ap# show controllers wired 1

wired1  Link encap:Ethernet  HWaddr C8:8B:6A:33:59  eMac Status: DOWN
        inet addr:9.11.8.104  Bcast:9.255.255.255  Mask:255.255.255.255
        DOWN BROADCAST RUNNING PROMISC MULTICAST  MTU:2400  Metric:1
        RX packets:38600 errors:0 dropped:1 overruns:0 frame:0

0 Rx fifo overrun, 0 Undersized rx, 0 Fragments rx,
0 Oversize rx, 0 Jabber rx, 0 Mac rx error,
0 Bad crc event, 0 Collision, 0 Late collision,
```

show crypto

To view the crypto attributes, use the **show crypto** command.

show crypto

Command Modes	User EXEC (>)
	Privileged EXEC (#)

Command History	Release	Modification
	8.1.111.0	This command was introduced.

The following example shows how to view the crypto attributes:

```
cisco-ap# show crypto
```

show debug

To view the debugs enabled, use the **show debug** command.

```
show debug
```

Command Modes	User EXEC (>)
	Privileged EXEC (#)

Command History	Release	Modification
	8.1.111.0	This command was introduced.

The following example shows how to view the debugs that are in enabled state:

```
cisco-ap# show debug
```

show dhcp

To view the status of Dynamic Host Configuration Protocol (DHCP), use the **show dhcp** command.

```
show dhcp {lease | servers}
```

Syntax Description	lease	Displays the DHCP addresses leased from a server
	servers	Displays the known DHCP servers

Command Modes	User EXEC (>)
	Privileged EXEC (#)

Command History**Release Modification**

8.1.111.0 This command was introduced.

The following example shows how to view the status of DHCP addresses leased from a server:

```
cisco-ap# show dhcp lease
```

show dot11 qos

To view the Quality of Service (QoS) parameters for 802.11 network, use the **show dot11 qos** command.

```
show dot11 qos
```

Command Modes

Privileged EXEC (#)

Command History**Release Modification**

8.1.111.0 This command was introduced.

The following example shows how to view the Quality of Service (QoS) parameters for 802.11 network:

```
cisco-ap# show dot11 qos
```

show dot11 wlan wpa3

To view the WPA3 configuration on an 802.11 network, use the **show dot11 wlan wpa3** command.

```
show dot11 wlan wpa3 [transition]
```

Syntax Description

transition	Shows details of WPA3 transition mode.
-------------------	--

Command Modes

Privileged EXEC (#)

Command History**Release Modification**

8.10 This command was introduced.

The following example shows how to view the WPA3 configuration on an 802.11 network:

```
cisco-ap# show dot11 wlan wpa3
```

show filesystems

To view the filesystem information, use the **show filesystems** command.

show filesystems

Command Modes
User EXEC (>)
Privileged EXEC (#)

Command History	Release	Modification
	8.1.111.0	This command was introduced.

The following example shows how to view the filesystem information:

```
cisco-ap# show filesystems
```

Filesystem	Size	Used	Available	Use%	Mounted on
/dev/ubivol/storage	57.5M	1.9M	52.6M	4%	/storage

show flash

To view the flash contents, use the **show flash** command.

show flash [**cores** [**detail** *core-file-name*] | **crash** | **syslogs**]

Syntax Description	cores	Displays the core files in flash
	detail	Displays the core file contents
	<i>core-file-name</i>	The core file name
	crash	Displays the crash files in flash
	syslogs	Displays the syslogs files in flash

Command Modes
User EXEC (>)
Privileged EXEC (#)

Command History	Release	Modification
	8.1.111.0	This command was introduced.

The following example shows how to view the details of a core file in flash:

```
cisco-ap# show flash cores detail filename1
```

show flexconnect

To view the flexconnect information for an access point, use the **show flexconnect** command.

```
show flexconnect {calea | cckm | client [aaa-override | counter | priority] | dot11r |
mcast | oeap | pmk | status | vlan-acl | wlan }
```

Syntax	Description
calea	Displays the calea information
cckm	Displays the CCKM cache entry information
client	Displays the client information
aaa-override	Specifies the AAA override parameters
counter	Specifies the counter for all clients
priority	Specifies the client priority
dot11r	Displays the 802.11r cache entry information
mcast	Displays the multicast information
oeap	Displays the FlexConnect OEAP information
pmk	Displays the OKC or PMK cache entry information
status	Displays the standalone status
vlan-acl	Displays the VLAN ACL mapping
wlan	Displays the WLAN configuration

Command Modes
User EXEC (>)
Privileged EXEC (#)

Command History	Release Modification
	8.1.111.0 This command was introduced.

The following example shows how to view the information about a client of a FlexConnect AP:

```
cisco-ap# show flexconnect client
```

show flexconnect oeap firewall

To view the OEAP firewall information, use the **show flexconnect oeap firewall** command.

show flexconnect oeap firewall [**dmz** | **filtering** | **forwarding**]

Syntax Description	dmz	Displays the OEAP firewall DMZ information
	filtering	Displays the OEAP firewall filtering information
	forwarding	Displays the OEAP firewall port forwarding information

Command Modes	User EXEC (>) Privileged EXEC (#)
---------------	--------------------------------------

Command History	Release	Modification
	8.1.111.0	This command was introduced.

The following example shows how to view the OEAP firewall DMZ information:

```
cisco-ap# show flexconnect oeap firewall dmz
```

show flexconnect wlan

To view the WLAN configuration for Flexconnect AP mode, use the **show flexconnect wlan** command.

show flexconnect wlan [**l2acl** | **qos** | **vlan**]

Syntax Description	l2acl	Specifies the Layer 2 ACL mapping for WLAN
	qos	Specifies the QoS parameters for WLAN
	vlan	Specifies the VLAN mapping for WLAN

Command Modes	User EXEC (>) Privileged EXEC (#)
---------------	--------------------------------------

Command History	Release	Modification
	8.1.111.0	This command was introduced.

The following example shows how to view the WLAN Layer 2 ACL mapping for the Flexconnect AP:

```
cisco-ap# show flexconnect wlan l2acl
```

show interfaces dot11Radio

To view the interface status and configuration for an 802.11 radio, use the **show interfaces dot11Radio** command.

```
show interfaces dot11Radio radio-interface-number {dfs | memory [memory-address length | firmware] | mumimo wlan-number | sniffer | statistics | wlanwlan-id datapathcounters | statistics }
```

Syntax Description

<i>radio-interface-number</i>	Specifies the interface number for 802.11 radio. The valid range is from 0 to 1
dfs	Displays the DFS statistics
memory	Displays the dump radio memory
<i>memory-address</i>	Specifies the memory address. The valid range is between 0 and ffffffff
<i>length</i>	Specifies the length. The valid range is from 0 to 64
firmware	Dumps firmware logs
mumimo	Displays the multiuser MIMO statistics information
<i>wlan-number</i>	The 802.11-specific value whose valid range is from 0 to 15.
sniffer	Displays the sniffer mode statistics
statistics	Displays the statistics information for 802.11 radio Note Cisco 1852, 9117, 9130 APs do not include the beacon tx statistics under the 802.11 tx statistics counter.
wlan <i>wlan-id</i>	Displays the specified WLAN information
datapath	Displays the datapath counters.
counters	Displays the datapath counters and drops.

Command Modes

Privileged EXEC (#)

Command History

Release Modification

8.1.111.0 This command was introduced.

8.9 This command was enhanced by adding the **datapath** parameter.

The following example shows how to view the DFS statistics for a 802.11 interface whose number is 1:

```
cisco-ap# show interfaces dot11Radio 1 dfs
```

```
DFS Data:
```

```
Radar Detected:          0
Inactive Radar Detected: 0
```

show interfaces network

To view the Linux network interfaces, use the **show interfaces network** command.

show interfaces network

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	8.1.111.0	This command was introduced.

The following example shows how to view the Linux network interfaces:

```
cisco-ap# show interfaces network
```

show interfaces wired

To view the wired interface, use the **show interfaces wired** command.

show interfaces wired *wired-interface-number* {**MIB-stats** | **datapath counters**}

Syntax Description	<i>wired-interface-number</i>	Wired interface number; valid range is between 0 to 3
	MIB-stats	Displays the AP internal-Switch MIB counters.
	datapath	Displays the datapath counters.
	counters	Displays the datapath counters and drops.

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	8.1.111.0	This command was introduced.
	8.9	This command was enhanced by adding the datapath parameter.

The following example shows how to view the wired interface whose number is 1:

```
cisco-ap# show interfaces wired 1
```

show inventory

To view the physical inventory, use the **show inventory** command.

show inventory

Command Modes

User EXEC (>)

Privileged EXEC (#)

Command History

Release Modification

8.1.111.0 This command was introduced.

The following example shows how to view the physical inventory:

```
cisco-ap# show inventory
```

```
NAME: AP2800, DESCR: Cisco Aironet 2800 Series (IEEE 802.11ac) Access Point
PID: AIR-AP2802I-D-K9 , VID: V01, SN: XXXXXXXXXXXX
```

show ip

To view the IP information, use the **show ip** command.

```
show ip {access-lists | interface brief | route | tunnel [eogre {domain | forwarding-table | gateway} | fabric | summary | sip-snooping {stats | status} ] }
```

Syntax Description

access-lists	Lists the IP access lists
interface	Displays the IP interface status and configuration
brief	Displays the brief summary of IP status and configuration
route	Displays the IP routing table
tunnel	Displays the IP tunnel information
eogre	Displays the EoGRE tunnel information
domain	Displays the EoGRE tunnel domain information
forwarding-table	Displays the EoGRE tunnel encapsulation and decapsulation information
gateway	Displays the EoGRE tunnel gateway information
fabric	Displays the IP fabric tunnel information
summary	Displays the information for all tunnels

sip-snooping	Displays the SIP snooping options.
stats	Displays the transmitted and received SIP snooping statistics.
status	Displays the SIP snooping status.

Command Modes	User EXEC (>)
	Privileged EXEC (#)

Command History	Release	Modification
	8.1.111.0	This command was introduced.
	8.9	This command was enhanced by adding the sip-snooping parameter.

The following example shows how to view information about the lists the IP access lists:

```
cisco-ap# show ip access-lists
```

show lacp

To view the Link Aggregation Control Protocol (LACP) options, use the **show lacp** command.

```
show lacp {counters | internal | neighbors}
```

Syntax Description	counters	Displays traffic information
	internal	Displays internal information
	neighbors	Displays LACP neighbor entries

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	8.1.111.0	This command was introduced.

The following example shows how to view the LACP traffic information:

```
cisco-ap# show lacp counters
```

show logging

To view the contents of logging buffers, use the **show logging** command.

```
show logging
```

Command Modes Privileged EXEC (#)

Command History

Release	Modification
8.1.111.0	This command was introduced.

The following example shows how to view the contents of logging buffers:

```
cisco-ap# show logging
```

show memory

To display memory usage on an access point, use the **show memory** command.

show memory [**detail** | **pool** | **summary**]

Syntax Description	detail	pool	summary
	Displays detailed system memory usage	Displays system memory pool	Display system memory usage statistics

Command Modes Privileged EXEC (#)

Command History

Release	Modification
8.1.111.0	This command was introduced.

The following example shows how to view the system memory usage statistics:

```
cisco-ap# show memory
Memory summary:
MemTotal:      1030608 kB
MemFree:       713832 kB
MemAvailable:  710492 kB
Buffers:       0 kB
Cached:        88224 kB
SwapCached:    0 kB
Active:        28932 kB

Swap:         0          0          0

```

show policy-map

To view policy maps on access point, use the **show policy-map** command.

show policy-map

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release Modification
------------------------	------------------------------------

8.1.111.0	This command was introduced.
-----------	------------------------------

The following example shows how to view the policy maps on the access point:

```
cisco-apshow policy-map
```

show processes

To view process utilization details, use the **show processes** command.

```
showprocesses {cpu cpu-number | dmalloc {capwap | wcp} | status}
```

Syntax Description	cpu <i>cpu-number</i> Displays the specified CPU's utilization of the processes; valid range of values for the CPU number is between 0 to 3
	dmalloc Displays the process utilization of the dmalloc processes
	capwap Displays dmalloc statistics for CAPWAP
	wcp Displays dmalloc statistics for WCP

status Displays watchdog process status

Command Modes Privileged EXEC (#)

Command History **Release Modification**

8.1.111.0 This command was introduced.

The following example shows how to view the process watchdog status:

```
cisco-ap# show processes status
      Process                Alive      Monitored
      capwapd                 True       True
      switchdrv               True       False
      wcpd                     True       True
      kclic                    True       True
      cleanaird                True       True
      mrvlfd                   True       True
```

show processes memory

To display the processes on the access point, use the **show processes memory** command.

show processes memory {maps | smaps} pid *pid-number*

Syntax Description

maps	Displays maps for the processes
smaps	Displays smaps for the processes
pid	Process ID that you have to specify <i>pid-number</i>

Command Modes Privileged EXEC (#)

Command History **Release Modification**

8.1.111.0 This command was introduced.

The following example shows how to view the list of processes utilizing the memory on the access point:

```
cisco-ap# show processes memory

Mem total:1030608 anon:23876 map:11424 free:712728
  slab:132748 buf:0 cache:88284 dirty:0 write:0

```

show rrm

To view the Radio Resource Management (RRM) properties, use the **show rrm** command.

```
show rrm {hyperlocation [level-list] | neighbor-list [details] | receive {configuration | statistics}}
```

Syntax Description	
hyperlocation <i>level-list</i>	Displays status of Cisco Hyperlocation on the AP
neighbor-list	Displays neighbor-list statistics
receive	Receive signal strength indicator (RSSI) of the AP
rogue	Displays rogue-related information

Command Modes Privileged EXEC (#)

Command History **Release Modification**

8.1.111.0 This command was introduced.

Usage Guidelines

The following example shows how to view the level 1 channel scan list in Hyperlocation:

```
cisco-ap# show rrm hyperlocation level1-list
Level-1 List for 2.4GHz Band
=====
Channel   Width      Serving MAC   Max Clients
-----
Level-1 List for 5GHz Band
=====
Channel   Width      Serving MAC   Max Clients
-----
```

show rrm rogue containment

To view rogue containment information on an access point, use the **show rrm rogue containment** command.

```
show rrm rogue containment {ignore | info} Dot11Radio radio-interface-number
```

Syntax Description

ignore	Displays list of rogue APs that are configured to be ignored
info	Displays rogue containment configuration and statistics for an AP
Dot11Radio	Specifies the Dot11Radio interface keyword.
<i>radio-interface-number</i>	Slot of the radio interface; valid values are 0 and 1

Command Modes

Privileged EXEC (#)

Command History**Release Modification**

8.1.111.0 This command was introduced.

The following example shows how to view the rogue containment and statistics for the 802.11 interface numbered 1:

```
cisco-ap# show rrm rogue containment info Dot11Radio 1
Rogue Containment Info and Stats for slot 1:
bssid client-addr contain-type channels

Request Status count
      Submit      0
      Success     0
      Timeout     0
      Error       0
      Tuned       0
      Flushed     0
      Bad Channel  0
      Tail Dropped 0
      Cancelled   0
NDP DFS Tx Cancelled 0
      Tx Failed   0
      Created     0
```

show rrm rogue detection

To view RRM rogue detection configuration parameters, use the **show rrm rogue detection** command.

```
show rrm rogue detection {adhoc | ap | clients | config | rx-stats} Dot11Radio
radio-interface-number
```

Syntax Description		
adhoc		Displays the primary ad hoc rogue AP list for a 802.11 radio slot; valid values are 0 and 1
ap		Displays rogue detection parameters for the AP for a 802.11 radio slot; valid values are 0 and 1
clients		Displays primary list of rogue clients
config		Displays rogue detection configuration on the AP
rx-stats		Displays rogue detection receive statistics on the 802.11 interfaces of an AP
Dot11Radio		Specifies 802.11 radio interface
<i>radio-interface-number</i>		The 802.11 radio interface number; valid values are 0 and 1

Command Modes Privileged EXEC (#)

Command History **Release Modification**

8.1.111.0 This command was introduced.

The following example shows how to view the RRM rogue detection configuration details:

```
cisco-ap# show rrm rogue detection config

Rogue Detection Configuration for Slot 0:
Rogue Detection Mode : Enabled
Rogue Detection Report Interval : 10
Rogue Detection Minimum Rssi : -90
Rogue Detection Transient Interval : 0
Rogue Detection Flex Contain : Disabled
Rogue Detection Flex Contain Adhoc : Disabled
Rogue Detection Flex Contain SSID : Disabled
Rogue Containment Autorate : Disabled
Scan Duration : 180000
Channel Count : 11
Transient Threshold : 0

Rogue Detection Configuration for Slot 1:
Rogue Detection Mode : Enabled
Rogue Detection Report Interval : 10
Rogue Detection Minimum Rssi : -90
Rogue Detection Transient Interval : 0
Rogue Detection Flex Contain : Disabled
Rogue Detection Flex Contain Adhoc : Disabled
Rogue Detection Flex Contain SSID : Disabled
```

```
Rogue Containment Autorate : Disabled
Scan Duration : 180000
Channel Count : 25
Transient Threshold : 0
```

show running-config

To display the contents of the currently running configuration on the access point, use the **show running-config** command.

show running-config

Command Modes

Privileged EXEC (#)

Command History

Release Modification

8.1.111.0 This command was introduced.

The following example shows how to view the contents of the currently running configuration on the access point:

```
cisco-ap# show running-config

AP Name : ap1540
Admin State : Enabled
AP Mode : Local
AP Submode : None

```

show security data-corruption

To view data inconsistency errors, use the **show security data-corruption** command.

show security data-corruption

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	8.7	This command was introduced.

Examples

The following example shows how to view data inconsistency errors:

```
cisco-ap# show security data-corruption
```

show security system state

To view the current state of system-level security, use the **show security system state** command.

show security system state

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	8.7	This command was introduced.

Examples

To view the current state of system-level security, use this command:

```
cisco-ap# show security system state

XSPACE:
    Non-Executable stack:    Yes
    Non-Executable heap:    Yes
    Non-Writable text:       Yes

OSC:
    Version:                  1.1.0

SafeC:
    Version:                  3.1.1
```

The table below describes the significant fields shown in the display:

Table 1: show security system state Field Descriptions

Field	Description
Non-Executable stack	Indicates whether the system prevents execution from the stack
Non-Executable heap	Indicates whether the system prevents execution from the heap
Non-Writable text	Indicates whether the system prevents the text section from being writable
OSC version	Indicates the version of the OSC library used by the applications
SafeC version	Indicates the version of the SafeC library used by the applications

show spectrum

To view the show commands of the spectrum firmware, use the **show spectrum** command.

```
show spectrum {list | recover | status }
```

Syntax Description	
list	Lists the spectrum FW data files
recover	Displays the spectrum FW recover count
status	Displays the spectrum FW status
Command Modes	Privileged EXEC (#)

Command History	Release	Modification
	8.1.111.0	This command was introduced.

The following example shows how to view the spectrum firmware status:

```
cisco-ap# show spectrum status

Spectrum FW status slot 0:
  version: 1.15.4
  status:  up, crashes 0, resets 0, radio reloads 0
  load:    37.00 34.75 33.50 33.25
  NSI Key: 26c1bd25893a4b6dd3a00fe71735d067
  NSI:     not configured
  reg_wdog: 255 26309 0
  dfs_wdog: 0
  dfs_freq: 0
Spectrum FW status slot 1:
  version: 1.15.4
  status:  up, crashes 0, resets 0, radio reloads 0
  load:    37.25 38.00 38.75 39.00
  NSI Key: 26c1bd25893a4b6dd3a00fe71735d067
  NSI:     not configured
  reg_wdog: 255 26309 0
  dfs_wdog: 0
  dfs_freq: 0
```

show tech-support

To automatically run show commands that display system information, use the **show tech-support** command.

show tech-support

Command Modes	Privileged EXEC (#)	
Command History	Release	Modification
	8.1.111.0	This command was introduced.

The following example shows how to automatically run show commands that display system information:

```
cisco-ap# show tech-support
```

show version

To view the software version information of the AP, use the **show version** command.

show version

Command Modes Privileged EXEC (#)

Command History	Release	Modification
	8.1.111.0	This command was introduced.

The following example shows how to view the software version information of the AP:

```
cisco-ap# show version
```

show trace dot11_chn

To view off-channel events on 802.11 channel of an AP, use the **show trace dot11_chn** command.

```
show trace dot11_chn {enable | disable | statistics}
```

Syntax Description	enable	disable	statistics
	Enables displaying of off-channel events on the 802.11 radio 0 and 1	Disables displaying of off-channel events on the 802.11 radios 0 and 1	Displays off-channel event statistics on 802.11 radios 0 and 1

Command Modes Privileged EXEC (#)

Command History	Release	Modification
	8.1.111.0	This command was introduced.

Examples

The following example shows how to view off-channel event statistics on 802.11 radios:

```
cisco-ap# show trace dot11_chn statistics

Dot11Radio0 Off-Channel Statistics:
total_count in_prog_count last-chan last-type last-dur
          0             0           0           0           0

Dot11Radio1 Off-Channel Statistics:
total_count in_prog_count last-chan last-type last-dur
          0             0           0           0           0
```

show trace

To view trace logs on the AP, use the **show trace** command.

```
show trace
```

Command Modes Privileged EXEC (#)

Command History

Release	Modification
8.1.111.0	This command was introduced.

The following example shows how to view the trace logs on the AP:

```
cisco-ap# show trace
```

show wips

To view details of the AP that is configured in wIPS mode, use the **show wips** command.

```
show wips {alarm alarm-id | analyzer | buffer | channel channelno | infrastructure-device | neighbors | node mac mac-address | node number number | object | policy policy-id | policy ssid | session mac-address | stats | violation node mac-address | violation channel channel-number}
```

Syntax Description

alarm	Displays statistics of the configured alarm if the AP is configured in wIPS mode; valid values are between 0 and 255
<i>alarm-id</i>	Alarm ID; valid values are between 0 and 255
analyzer	Displays analyzer related statistics
buffer	Displays statistics of the buffer
channel	Displays channel related statistics
<i>channelno</i>	Channel number; valid values are between 0 and 255
infrastructure-device	Displays AP infrastructure information
neighbors	Displays statistics of neighbors.
node	Displays AP node information
mac <i>mac-address</i>	MAC address of the node.
node	Node.
number <i>number</i>	Node number; valid values are between 1 and 500
object	AP object store
policy { <i>policy-id</i> ssid }	AP policy; you must specify either a policy ID or the policy SSID.
session <i>mac-address</i>	Displays node session details; you must enter the MAC address of the node

stats	Displays AP statistics
violation	Tracks AP violations
node <i>mac-address</i>	Tracks node-based violations
channel <i>channel-number alarm-id</i>	Tracks channel-based violations; you must enter channel number and alarm ID

Command Modes Privileged EXEC (#)

Command History **Release** **Modification**

8.1.111.0 This command was introduced.

The following example shows how to view the wIPS statistics information on the AP:

```
cisco-ap# show wips stats
```
