Introduction

Ce document décrit comment configurer et dépanner DHCP dans un fabric VxLAN avec des commutateurs Nexus 9000.

Conditions préalables

Exigences

Cisco vous recommande de prendre connaissance des rubriques suivantes :

- Logiciel Nexus NX-OS.
- Virtual Port Channel (vPC).
- VxLAN BGP L2VPN EVPN
- BGP address-family IPv4
- OSPF
- PIM multidiffusion (mode intermédiaire)
- DHCP

Composants utilisés

Les informations contenues dans ce document sont basées sur les versions de matériel et de logiciel suivantes :

- Cisco Nexus 9000 avec Cisco NX-OS.
 - N9K-C93180YC-EX
 - N9K-C93180YC-FX
 - NX-OS 10.3(4a)
- Centre de données Windows Server 2022

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. Si votre réseau est en ligne, assurez-vous de bien comprendre l'incidence possible des commandes.

Remarque : toute question relative à la configuration et à l'intégrabilité de logiciels ou de matériels tiers n'est pas prise en charge par Cisco. L'utilisation d'outils tiers est le meilleur moyen de démontrer votre configuration et votre fonctionnement avec les équipements Cisco au client.

Informations générales

Configuration de sous-couche et de superposition pour VxLAN en laboratoire

Schéma de fabric VxLAN en laboratoire

- COLONNE VERTÉBRALE :
 - Ce commutateur Nexus envoie des paquets DHCP (Discover, Offer, Request, Ack) sans être décapsulé dans ce scénario. Seul l'en-tête externe est utilisé.
 - Sert de points de routage centraux dans la structure du réseau.
 - Responsable de l'interconnexion de tous les commutateurs LEAF et de la facilitation du flux de données entre eux.
 - Participe au protocole BGP pour distribuer des routes EVPN aux commutateurs LEAF.
 - Effectue le routage IP et peut acheminer le trafic entre différents sous-réseaux ou segments VxLAN en examinant les en-têtes IP externes.
 - Sépare le réseau de superposition (VxLAN) du réseau physique sous-jacent.
 - Gère le sous-réseau avec les protocoles de routage IP traditionnels, tandis que le sous-réseau est géré par VxLAN avec BGP EVPN, fournissant une architecture réseau évolutive et flexible.
- LEAF-1 :
 - Les commutateurs LEAF fournissent une connectivité physique pour les terminaux tels que les serveurs, les périphériques de stockage et d'autres appareils réseau.
 - Les commutateurs LEAF agissent comme des VTEP, ce qui signifie qu'ils encapsulent et décapsulent les paquets VxLAN.
 - Dans ce scénario, HOST#1 effectue la requête d'adresse IP.
 - LEAF-1 est responsable de l'encapsulation des paquets DHCP dans l'en-tête VxLAN.
 - L'HÔTE 1 reçoit des paquets DHCP de manière transparente en tant qu'Ethernet classique.
- LEAF-1-vPC et LEAF-2-vPC :
 - Les commutateurs LEAF participent au plan de contrôle EVPN en exécutant le protocole BGP et en échangeant des informations de route. Cela permet la distribution

des informations d'adresses MAC et IP, garantissant que le trafic peut être acheminé efficacement à travers le fabric VxLAN.

- Dans ce scénario, le serveur DHCP est associé au VLAN 10 avec le VNI 101010, tout comme l'HÔTE 1. Cela signifie qu'il s'agit uniquement du pontage VxLAN.
 - Si le serveur DHCP était associé à un VNI autre que l'hôte 1, un L3VNI serait strictement nécessaire pour le routage. Le VNI source et de destination doit être créé.
 - Le serveur DHCP reçoit des paquets DHCP de manière transparente en tant qu'Ethernet classique.
 - Le trafic du module BUM est reçu par les deux commutateurs Nexus dans vPC, mais seul le commutateur Nexus principal opérationnel dans vPC envoie le trafic. Le commutateur Nexus secondaire abandonne le trafic. Dans ce scénario, LEAF-1-vPC est le principal système opérationnel.
 - L'utilisation d'infra-VLAN est obligatoire, car si l'interface de LEAF-2-vPC vers SPINE tombe en panne, les paquets DHCP ne peuvent pas être envoyés. Pour envoyer du trafic encapsulé par VxLAN à LEAF-1-vPC, ce VLAN de sauvegarde est requis. De cette façon, LEAF-1-vPC pouvait envoyer des paquets DHCP à SPINE.
- N9K-ACCESS :
 - Ce commutateur Nexus fournit uniquement la connectivité aux deux leafs à l'aide d'un port-channel vPC à des fins de redondance vers HOST#2

Configuration DHCP sur les commutateurs Nexus

LEAF-1

Étape 1. Activez la fonctionnalité DHCP.

```
LEAF-1(config)# feature dhcp
```

Remarque : le serveur DHCP et la commande `relay agent service dhcp`, `ip dhcp relay`, et `ipv6 dhcp relay` sont activés par défaut depuis NX-OS 7.x.

Étape 2. Appliquez la commande ip dhcp relay information option.

```
LEAF-1(config)# ip dhcp relay information option
```

Remarque : cette commande permet à l'agent de relais DHCP d'insérer et de supprimer des informations de l'option 82 sur les paquets qui sont transférés.

Étape 3. Appliquez la commande ip dhcp relay information option vpn.

```
LEAF-1(config)# ip dhcp relay information option vpn
```

Remarque : cette commande active les requêtes de relais DHCP qui arrivent sur un VRF différent auquel appartient le serveur DHCP.

Étape 4. Appliquez la commande « ip dhcp relay address [ip address of DHCP server] ».

Remarque : dans cet exemple, l'adresse IP du serveur DHCP est 10.10.10.150.

```
LEAF-1(config)# interface v1an 10  
LEAF-1(config-if)# ip dhcp relay address 10.10.10.150
```

Étape 5. Appliquez la commande « ip dhcp relay source-interface [unique loopback] ».

Remarque : cette commande configure l'adresse IP source de l'agent de relais DHCP pour qu'elle gère les commandes Discover, Offer, Request et ACK pour les communications monodiffusion, l'agent de relais DHCP utilisant l'adresse IP de l'interface SVI comme adresse IP source de l'agent de relais DHCP. Cela n'est pas souhaitable, car cette adresse IP est partagée par plusieurs VTEP et un trou noir des paquets DHCP peut se produire. Pour éviter cela, une adresse IP unique (à l'aide d'une interface de bouclage) est nécessaire pour différencier chaque VTEP.

```
LEAF-1(config)# interface vlan 10
LEAF-1(config-if)# ip dhcp relay source-interface loopback100
```

Étape 6. Dans le locataire correspondant VRF dans BGP, redistribuez directement la route avec une liste de préfixes et une route-map qui inclut l'adresse IP de l'interface de bouclage.

Remarque : cette interface de bouclage appartient au locataire de l'interface SVI.

```
LEAF-1(config)# show running-config interface loopback 100
interface loopback100
  vrf member tenant-a
  ip address 172.16.10.8/32

LEAF-1(config)# ip prefix-list host_subnets seq 15 permit 172.16.10.8/32
LEAF-1(config)# route-map direct_routes_tenant-a permit 10
LEAF-1(config-route-map)# match ip address prefix-list host_subnets
LEAF-1(config-route-map)# router bgp 65000
LEAF-1(config-router)# vrf tenant-a
LEAF-1(config-router-vrf)# address-family ipv4 unicast
LEAF-1(config-router-vrf-af)# redistribute direct route-map direct_routes_tenant-a
```

Étape 7. Vérifiez que l'adresse IP de l'interface de bouclage est annoncée dans BGP L2VPN EVPN aux Spines avec la commande : `show bgp l2vpn evpn [loopback IP] vrf [tenant vrf]`.

```
LEAF-1(config)# show bgp l2vpn evpn 172.16.10.8 vrf tenant-a
BGP routing table information for VRF default, address family L2VPN EVPN
Route Distinguisher: 192.168.5.5:4 (L3VNI 303030)

Étape 9. Vérifiez qu'il y a une route pour le serveur DHCP sur le locataire source avec la commande `show ip route [DHCP server IP] vrf [tenant vrf]`.

Remarque : l'entrée de route à utiliser doit être de VxLAN à VRF par défaut. Si aucune route n'est disponible, vérifiez si le VTEP connaît localement l'adresse IP du serveur DHCP.

```
LEAF-1# show running-config interface vlan 10
interface Vlan10
  no shutdown
  vrf member tenant-a <<<< source tenant
  no ip redirects
  ip address 10.10.10.1/24
  no ipv6 redirects
  fabric forwarding mode anycast-gateway
  ip dhcp relay address 10.10.10.150 <<<< DHCP server
  ip dhcp relay source-interface loopback100
```

```
LEAF-1# show ip route 10.10.10.150 vrf tenant-a
10.10.10.150/32, ubest/mbest: 1/0
  *via 192.168.13.254%default, [200/0], 2w0d, bgp-65000, internal, tag 65000, segid: 303030 tunnelid:
```

Étape 10. Vérifiez que l'adresse IP du serveur DHCP est accessible en utilisant l'interface de bouclage et le VRF correspondant comme source VRF avec la commande ping [DHCP server IP] source-interface loopback [x] vrf [tenant vrf].

```
LEAF-1# ping 10.10.10.150 source-interface loopback 100 vrf tenant-a
PING 10.10.10.150 (10.10.10.150): 56 data bytes

address. If request is unicast it will be HW switched
```

DHCP LEAF-1-vPC

Étape 1. Activez la fonctionnalité DHCP.

```
LEAF-1-VPC(config)#feature dhcp
```

Remarque : le serveur DHCP et la commande relay agent service dhcp, ip dhcp relay, et ipv6 dhcp relay sont activés par défaut depuis NX-OS 7.x.

Étape 2. Appliquez la commande ip dhcp relay information option.

```
LEAF-1-VPC(config)#ip dhcp relay information option
```

Remarque : cette commande permet à l'agent de relais DHCP d'insérer et de supprimer des informations de l'option 82 sur les paquets qui sont transférés.

Étape 3. Appliquez la commande « ip dhcp relay information option vpn ».

```
LEAF-1-VPC(config)# ip dhcp relay information option vpn
```

Remarque : cette commande active les requêtes de relais DHCP qui arrivent sur un VRF différent auquel appartient le serveur DHCP.

Étape 4. Appliquez la commande `ip dhcp relay address [adresse ip du serveur DHCP]`.

Remarque : dans cet exemple, l'adresse IP du serveur DHCP est 10.10.10.150.

```
LEAF-1-VPC(config)#interface vlan 10
LEAF-1-VPC(config-if)#ip dhcp relay address 10.10.10.150
```

Étape 5. Appliquez la commande « ip dhcp relay source-interface [unique loopback] ».

Remarque : cette commande configure l'adresse IP source de l'agent de relais DHCP pour qu'elle gère les commandes Discover, Offer, Request et ACK pour les communications monodiffusion, l'agent de relais DHCP utilisant l'adresse IP de l'interface SVI comme adresse IP source de l'agent de relais DHCP. Cela n'est pas souhaitable, car cette adresse IP est partagée par plusieurs VTEP et un trou noir des paquets DHCP peut se produire. Pour éviter cela, une adresse IP unique (à l'aide d'une interface de bouclage) est nécessaire pour différencier chaque VTEP.

```
LEAF-1-VPC(config)#interface vlan 10
LEAF-1-VPC(config-if)# ip dhcp relay source-interface loopback100
```

Étape 6. Dans le locataire correspondant VRF dans BGP, redistribuez directement la route avec une liste de préfixes et une route-map qui inclut l'adresse IP de l'interface de bouclage.

Remarque : cette interface de bouclage appartient au locataire de l'interface SVI.

```
LEAF-1-VPC(config)# show running-config interface loopback 100
interface loopback100
  vrf member tenant-a
  ip address 172.16.10.9/32

LEAF-1-VPC(config)# ip prefix-list host_subnets seq 15 permit 172.16.10.9/32
LEAF-1-VPC(config)# route-map direct_routes_tenant-a permit 10
LEAF-1-VPC(config-route-map)# match ip address prefix-list host_subnets
LEAF-1-VPC(config-route-map)# router bgp 65000
LEAF-1-VPC(config-router)# vrf tenant-a
LEAF-1-VPC(config-router-vrf)# address-family ipv4 unicast
LEAF-1-VPC(config-router-vrf-af)# redistribute direct route-map direct_routes_tenant-a
```

Étape 7. Vérifiez que l'adresse IP de l'interface de bouclage est annoncée dans BGP L2VPN EVPN aux Spines avec la commande : `show bgp l2vpn evpn [loopback IP] vrf [tenant vrf]`.

```
LEAF-1-VPC# show bgp l2vpn evpn 172.16.10.9 vrf tenant-a

Configuration du serveur DHCP sous Windows Server 2022

Configuration de l'étendue d'adressage IP pour les hôtes.

Étape 1. Ouvrez le Gestionnaire de serveur et vérifiez qu'aucune alarme n'est présente sur le serveur DHCP dans le tableau de bord.

Tableau de bord du Gestionnaire de serveur sur Windows Server 2022

Conseil : l'image s'agrandit lorsque vous double-cliquez.

Étape 2. Ouvrez l'application DHCP Server.

Serveur DHCP sur Windows Server 2022

Étape 3. Cliquez avec le bouton droit sur IPv4, puis cliquez sur New Scope.

Étape 4. Cliquez sur Next (Suivant).

Étape 5. Indiquez un nom et une description. Dans cet exemple, le nom est le sous-réseau qui appartient au VLAN 10 et la description est L2VNI comme L2VNI répertorié au VLAN 10.

New Scope Wizard

Scope Name

You have to provide an identifying scope name. You also have the option of providing a description.

Type a name and description for this scope. This information helps you quickly identify how the scope is to be used on your network.

Name:

Description:

< Back

Next >

Cancel

Étape 6. Configurez la plage d'adresses IP. Il s'agit du pool d'hôtes.

New Scope Wizard

IP Address Range

You define the scope address range by identifying a set of consecutive IP addresses.

Configuration settings for DHCP Server

Enter the range of addresses that the scope distributes.

Start IP address:

End IP address:

Configuration settings that propagate to DHCP Client

Length:

Subnet mask:

< Back

Next >

Cancel

Étape 6. Excluez l'adresse IP partagée de la configuration SVI dans les VTEP. Dans cet exemple, l'interface VLAN 10 a l'adresse IP.10.10.1/24.

Avertissement : si l'adresse IP n'est pas exclue de l'interface SVI (ou de la passerelle par défaut), la duplication des adresses IP peut avoir un impact sur la livraison du trafic.

```
LEAF-1# show running-config interface v1an 10
<snip>
interface V1an10
  no shutdown
  vrf member tenant-a
  no ip redirects
  ip address 10.10.10.1/24
  no ipv6 redirects
  fabric forwarding mode anycast-gateway
  ip dhcp relay address 10.10.10.150
  ip dhcp relay source-interface loopback100
```

New Scope Wizard

Add Exclusions and Delay

Exclusions are addresses or a range of addresses that are not distributed by the server. A delay is the time duration by which the server will delay the transmission of a DHCP OFFER message.

Type the IP address range that you want to exclude. If you want to exclude a single address, type an address in Start IP address only.

Start IP address:

End IP address:

Add

Excluded address range:

Address 10.10.10.1

Remove

Subnet delay in milli second:

< Back

Next >

Cancel

Étape 7. Configurez la durée du bail de l'adresse IP. Il s'agit de la durée pendant laquelle un hôte peut utiliser l'adresse IP attribuée avant de la renouveler.

New Scope Wizard

Lease Duration

The lease duration specifies how long a client can use an IP address from this scope.

Lease durations should typically be equal to the average time the computer is connected to the same physical network. For mobile networks that consist mainly of portable computers or dial-up clients, shorter lease durations can be useful. Likewise, for a stable network that consists mainly of desktop computers at fixed locations, longer lease durations are more appropriate.

Set the duration for scope leases when distributed by this server.

Limited to:

Days:

Hours:

Minutes:

< Back

Next >

Cancel

Étape 8. Sélectionnez Yes, I want to configure these options now.

New Scope Wizard

Configure DHCP Options

You have to configure the most common DHCP options before clients can use the scope.

When clients obtain an address, they are given DHCP options such as the IP addresses of routers (default gateways), DNS servers, and WINS settings for that scope.

The settings you select here are for this scope and override settings configured in the Server Options folder for this server.

Do you want to configure the DHCP options for this scope now?

- Yes, I want to configure these options now
- No, I will configure these options later

< Back

Next >

Cancel

Étape 9. Configurez l'adresse IP de la passerelle par défaut.

New Scope Wizard

Router (Default Gateway)

You can specify the routers, or default gateways, to be distributed by this scope.

To add an IP address for a router used by clients, enter the address below.

IP address:

Add

Remove

Up

Down

< Back

Next >

Cancel

Étape 10. Configurer le nom de domaine et le serveur DNS

New Scope Wizard

Domain Name and DNS Servers

The Domain Name System (DNS) maps and translates domain names used by clients on your network.

You can specify the parent domain you want the client computers on your network to use for DNS name resolution.

Parent domain:

To configure scope clients to use DNS servers on your network, enter the IP addresses for those servers.

Server name:

IP address:

Étape 11. Configurez le serveur WINS, le cas échéant. Cette opération peut être ignorée si les informations ne sont pas connues.

New Scope Wizard

WINS Servers

Computers running Windows can use WINS servers to convert NetBIOS computer names to IP addresses.

Entering server IP addresses here enables Windows clients to query WINS before they use broadcasts to register and resolve NetBIOS names.

Server name:

Resolve

IP address:

Add

Remove

Up

Down

To change this behavior for Windows DHCP clients modify option 046, WINS/NBT Node Type, in Scope Options.

< Back

Next >

Cancel

Étape 12. Sélectionnez Oui, je souhaite activer cette étendue maintenant.

New Scope Wizard

Activate Scope
Clients can obtain address leases only if a scope is activated.

Do you want to activate this scope now?

Yes, I want to activate this scope now

No, I will activate this scope later

< Back Next > Cancel

Configuration de l'étendue pour les adresses IP uniques des boucles dans SVI en tant qu'agent de relais DHCP.

Étape 1. Cliquez avec le bouton droit sur IPv4 et sélectionnez IPv4Scope.

Nouvelle étendue dans DCHP

Étape 2. Indiquez un nom et une description. Dans cet exemple, name est le sous-réseau utilisé pour le sous-réseau avec adresse de bouclage.

IPte : un bouclage est utilisé en mode bouclé adresse IP unique dans le fabric VxLAN pour le locataire VxLAN. Ceci doit être annoncé dans la redistribution de route EVPN L2VPN BGP dans BGP dans le VRF du locataire correspondant dans l'adresse IPv4-famIPv4

```
LEAF-1# show running-config interface loopback 100
<snip>
interface loopback100
  vrf member tenant-a
  ip address 172.16.10.8/32
```

New Scope Wizard

Scope Name

You have to provide an identifying scope name. You also have the option of providing a description.

Type a name and description for this scope. This information helps you quickly identify how the scope is to be used on your network.

When clients obtain an address, they are given DHCP options such as the IP addresses of routers (default gateways), DNS servers, and WINS settings for that scope.

The settings you select here are for this scope and override settings configured in the Server Options folder for this server.

Do you want to configure the DHCP options for this scope now?

- Yes, I want to configure these options now
- No, I will configure these options later

< Back

Next >

Cancel

Étape 7. Cliquez sur Finish (Terminer).

New Scope Wizard

Completing the New Scope Wizard

You have successfully completed the *New Scope* wizard.

Before clients can receive addresses you need to do the following:

1. Add any scope specific options (optional).
2. Activate the scope.

To provide high availability for this scope, configure failover for the newly added scope by right clicking on the scope and clicking on *configure failover*.

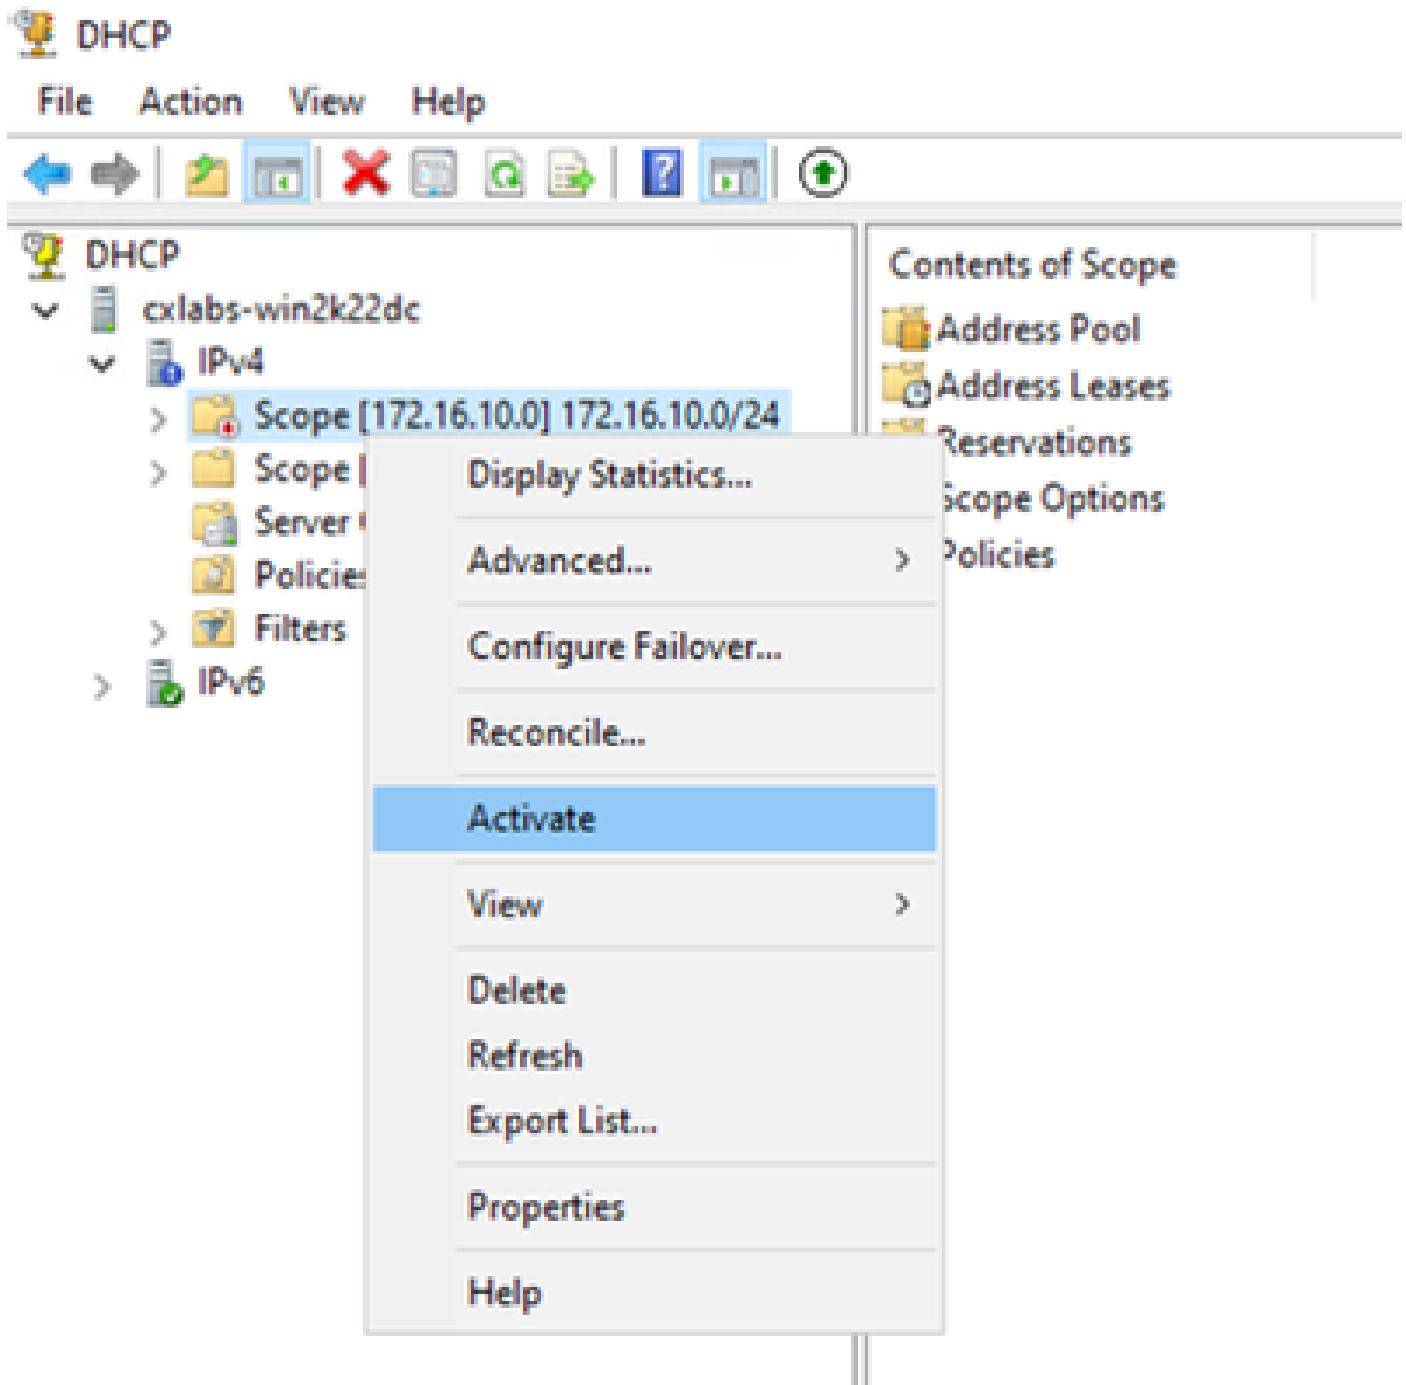

To close this wizard, click *Finish*.

< Back

Finish

Cancel

Étape 8. Cliquez avec le bouton droit sur l'étendue créée et sélectionnez Activer.

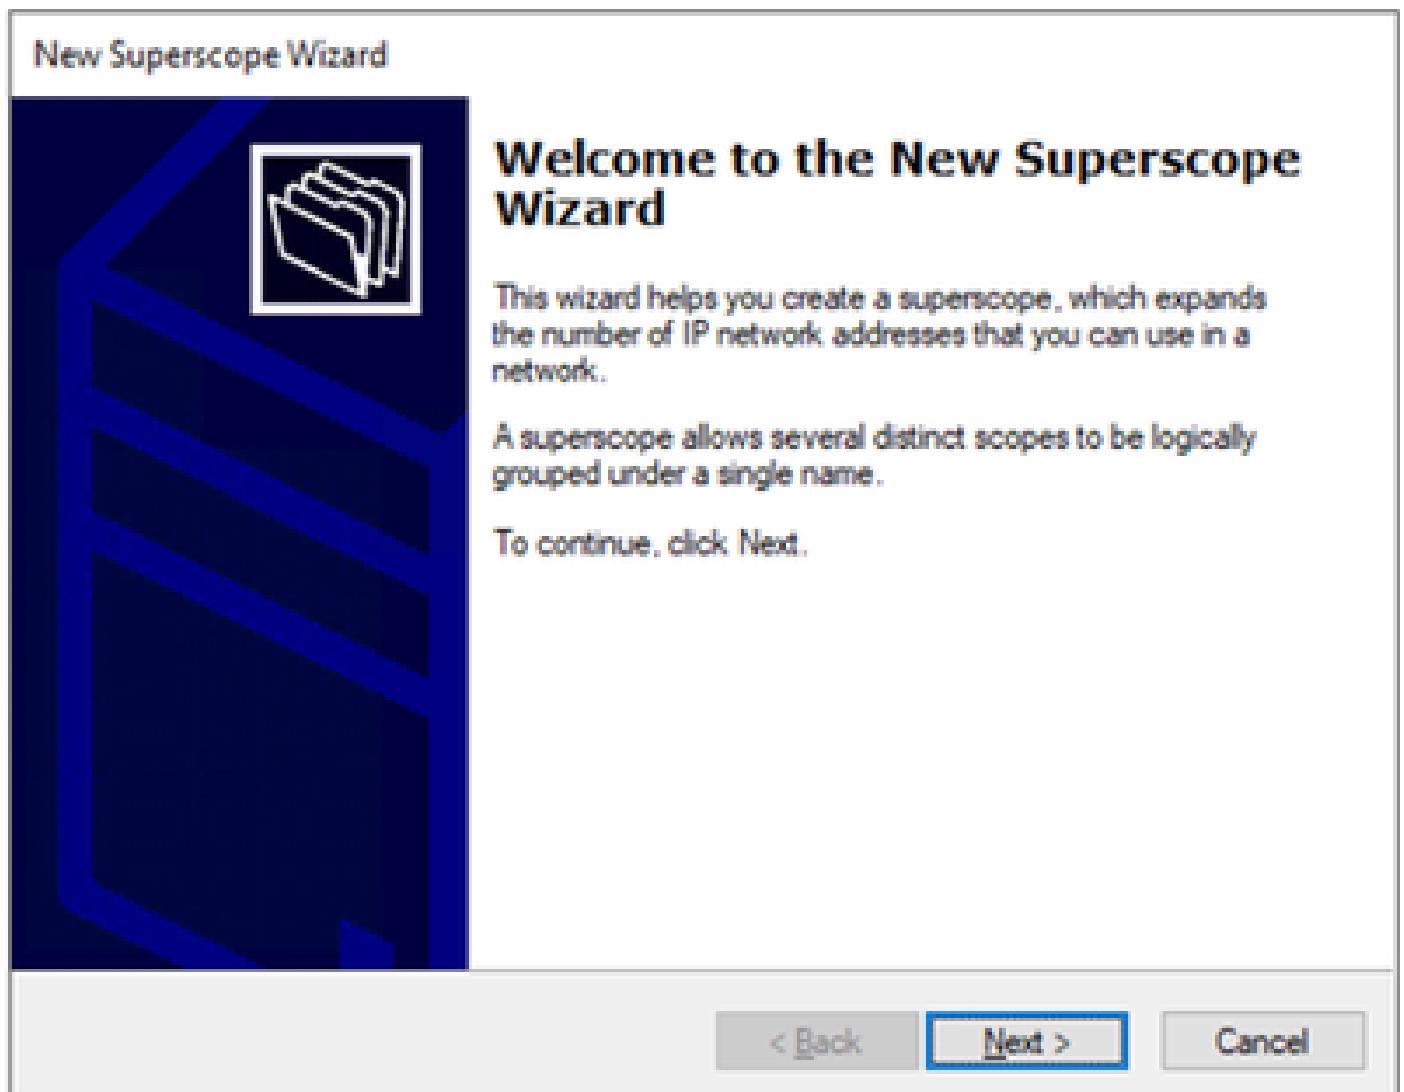

Configuration de la super-étendue pour le fabric VxLAN.

Étape 1. Cliquez avec le bouton droit dans IPv4 et sélectionnez Nouvelle étendue globale.

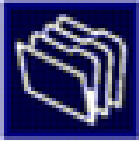

Étape 2. Cliquez sur Next (Suivant).

Étape 3. Écrivez le nom de l'étendue globale.

New Superscope Wizard

Superscope Name
You have to provide an identifying superscope name.

Name:

< Back Next > Cancel

Étape 4. Sélectionnez toutes les étendues qui appartiennent au fabric VxLAN.

New Superscope Wizard

Select Scopes

You create a superscope by building a collection of scopes.

Select one or more scopes from the list to add to the superscope.

Available scopes:

[10.10.10.0] 10.10.10.0/24
[172.16.10.0] 172.16.10.0/24

< Back

Next >

Cancel

Étape 5. Sélectionnez toutes les étendues qui appartiennent au fabric VxLAN.

New Superscope Wizard

Select Scopes

You create a superscope by building a collection of scopes.

Select one or more scopes from the list to add to the superscope.

Available scopes:

[10.10.10.0] 10.10.10.0/24
[172.16.10.0] 172.16.10.0/24

< Back

Next >

Cancel

Étape 6. Vérifiez que toutes les étendues globales de fabric VxLAN sont en place et cliquez sur Finish.

Configurez l'option 82 dans les étendues d'hôte.

Étape 1. Cliquez avec le bouton droit sur Stratégies (dernière option) dans l'étendue de l'hôte et cliquez sur Nouvelle stratégie.

Étape 2. Écrivez un nom et une description, puis cliquez sur Next.

Remarque : dans cet exemple, la stratégie est créée pour sélectionner l'adressage IP particulièrement pour les hôtes dans Leaf-1 pour VNI 101010 basé sur VNI Remote-ID (paramètre de l'option 82).

DHCP Policy Configuration Wizard

Policy based IP Address and Option Assignment

This feature allows you to distribute configurable settings (IP address, DHCP options) to clients based on certain conditions (e.g. vendor class, user class, MAC address, etc.).

This wizard will guide you setting up a new policy. Provide a name (e.g. VoIP Phone Configuration Policy) and description (e.g. NTP Server option for VoIP Phones) for your policy.

Policy Name:

Description:

< Back

Next >

Cancel

Étape 3. Cliquez sur Add. Dans Critères, sélectionnez Informations sur l'agent relais. Dans Opérateur, sélectionnez Égal à. Sélectionnez ensuite Agent Remote ID et saisissez la valeur. Cliquez sur OK, puis sur Suivant.

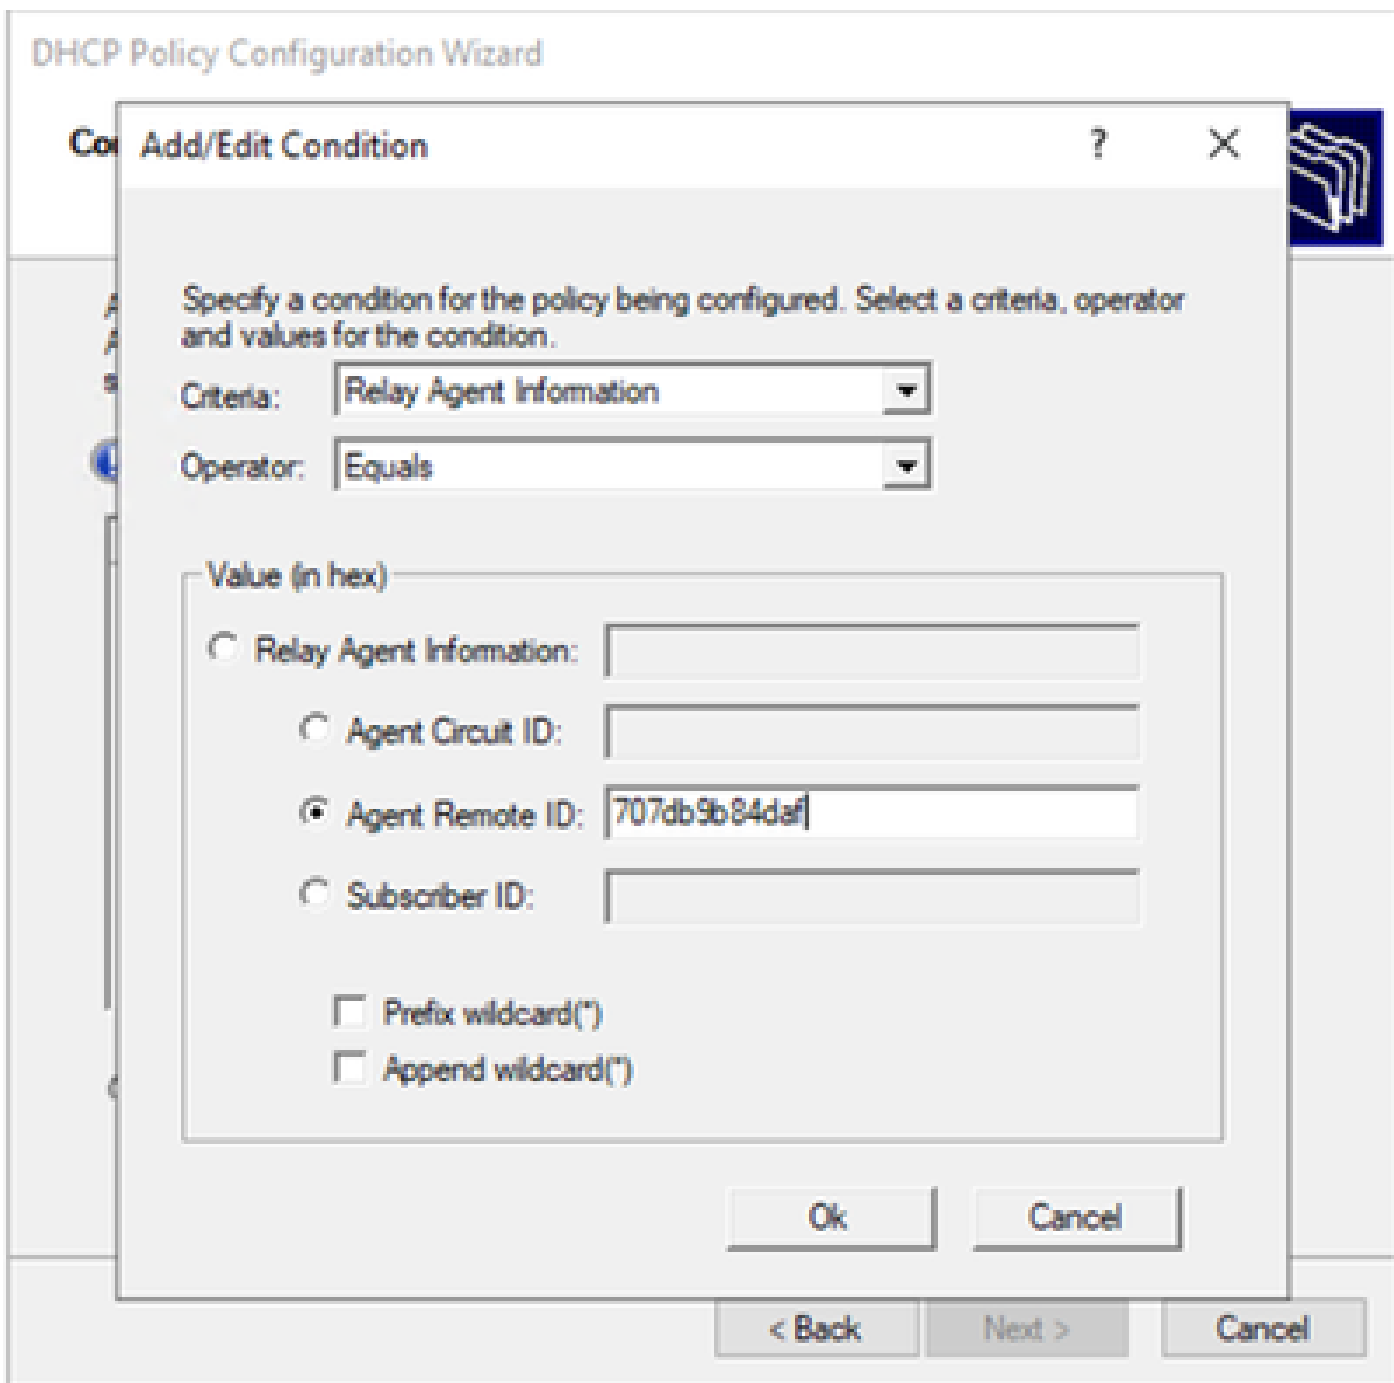

Remarque : l'ID distant est obtenu à partir de l'adresse MAC de l'interface SVI à laquelle l'interface SVII est associée.

Conseil : une stratégie peut être appliquée à plusieurs ID distants (ou VTEP) en ajoutant d'autres conditions et en sélectionnant OU au lieu de ET.

```
LEAF-1# show interface vlan 10
Vlan10 is up, line protocol is up, autostate enabled
  Hardware is EtherSVI, address is 707d.b9b8.4daf <<<<
  Internet Address is 10.10.10.1/24
<snip>
```

Étape 4. Configurez l'adressage IP que l'adresse IP existante peut utiliser sur le ou les VTEP sélectionnés par l'ID, puis cliquez sur Next.

Remarque : dans cet exemple, il n'y a qu'une seule machine virtuelle connectée à Leaf-1, donc une seule adresse IP est requise. Ici, une deuxième adresse IP est ajoutée IPn si un autre hôte se connecte.

DHCP Policy Configuration Wizard

Configure settings for the policy

If the conditions specified in the policy match a client request, the settings will be applied.

A scope can be subdivided into multiple IP address ranges. Clients that match the conditions defined in a policy will be issued an IP Address from the specified range.

Configure the start and end IP address for the range. The start and end IP addresses for the range must be within the start and end IP addresses of the scope.

The current scope IP address range is 10.10.10.1 - 10.10.10.254

If an IP address range is not configured for the policy, policy clients will be issued an IP address from the scope range.

Do you want to configure an IP address range for the policy: Yes No

Start IP address:

End IP address:

Percentage of IP address range: 0.8

< Back

Next >

Cancel

Étape 5. Cochez la case à gauche de Routeur 003 sous DHCP Standard Option. Ensuite, écrivez l'adresse IP de la passerelle par défaut pour les hôtes qui appartiennent à cette stratégie et appuyez sur Add. Cliquez sur Next (Suivant).

Attention : vous pouvez sélectionner plusieurs options, mais si vous ne savez pas quelle valeur entrer, ne le faites pas. Une configuration incohérente ou erronée peut provoquer un comportement inattendu.
