## [Inleiding](#)

Dit document beschrijft hoe u Border Gateway Protocol (BGP) dient te configureren met behulp van 32-bits AS-nummer. In BGP, is elk routingdomein één enkel administratief domein en heeft een uniek AS aantal toegewezen aan het, en wordt geëxploiteerd binnen een uniform reeks routingbeleid. Het onderhoudt ook routing tussen domeinen.

In dit document wordt BGP-ping ingesteld tussen 16-bits en 32-bits BGP-routers. De nieuwe 32-bits AS-modus is compatibel met de 16-bits AS-modus. De BGP-peers die in 32-bits modus kunnen werken, reageren positief op de nieuwe mogelijkheid en die sessie werkt in nieuwe modus. Aan de andere kant, de 32-bits BGP-peers wanneer ze met de 16-bits BGP-sprekers communiceren, negeren de 16-bits sprakrouters deze nieuwe mogelijkheid en opereren hun BGP-sessie in 16-bits modus.

## [Voorwaarden](#)

### [Vereisten](#)

Cisco raadt u aan basiskennis van BGP te hebben.

## [Hardware en softwareversies](#)

De configuraties in dit document zijn gebaseerd op Cisco 7200 Series router met Cisco IOS® softwarerelease 15.0(1).

## Conventies

Raadpleeg [Cisco Technical Tips Conventions \(Conventies voor technische tips van Cisco\)](#) voor meer informatie over documentconventies.

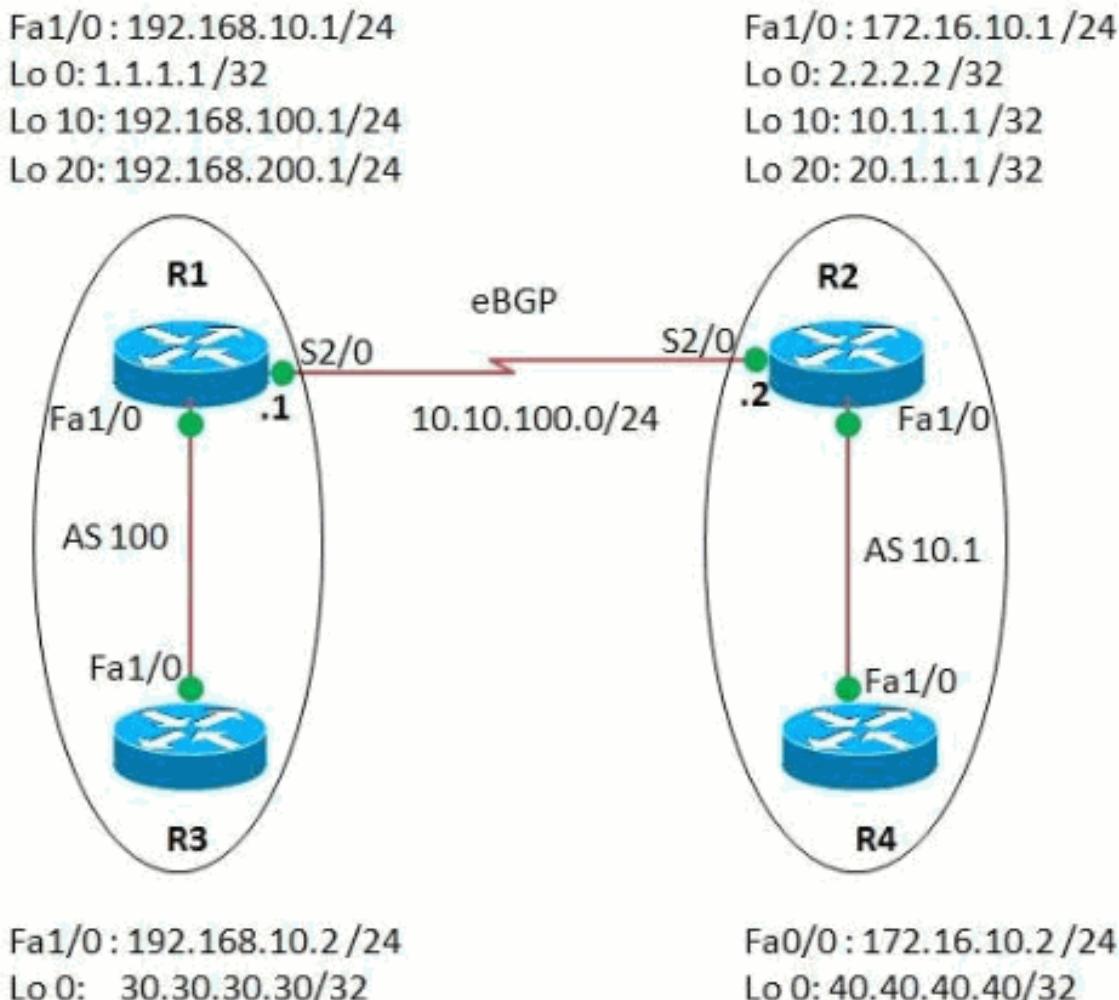

## Configureren

In dit voorbeeld worden de routers R1 en R3 geconfigureerd om in AS 100 te zijn, wat een iBGP-relatie vormt met 16-bits AS-modus. De routers R2 en R4 worden geconfigureerd in AS 10.1 en vormen eBGP met behulp van de 32-bits AS-modus. De routers R1 en R2 lopen en IGP protocol, in dit voorbeeld OSPF tussen elkaar en vormen ook eBGP dichtbij tussen hen.

N.B.: Gebruik het [Opdrachtupgereedschap \(alleen geregistreerde klanten\)](#) om meer informatie te vinden over de opdrachten die in dit document worden gebruikt.

## Netwerkdiagram

Het netwerk in dit document is als volgt opgebouwd:

## Configuraties

Dit document gebruikt deze configuraties:

- [router R1](#)
- [router R2](#)
- [router R3](#)
- [router R4](#)

### router R1

```
R1#show run
Building configuration...
!
version 15.0
!
hostname R1

end
!--- iBGP peering is formed between routers R2 and R4
using 32-bit AS number.

```

## Verifiëren

Gebruik dit gedeelte om te bevestigen dat de configuratie correct werkt.

Het [Uitvoer Tolk \(uitsluitend geregistreerde klanten\)](#) (OIT) ondersteunt bepaalde **show** opdrachten. Gebruik de OIT om een analyse van de opdrachtoutput van de **show** te bekijken.

## Opdrachten weergeven

Om te verifiëren dat BGP 32-bits ASN kan ondersteunen, gebruik de [\*\*show ip bgp\*\*](#) commando.

### ip bgp-buurman tonen

#### In router R1

```

R1#show ip bgp neighbor 2.2.2.2
BGP neighbor is 2.2.2.2, remote AS 10.1, external link
 BGP version 4, remote router ID 20.20.20.20
 BGP state = Established, up for 03:28:22
 Last read 00:00:41, last write 00:00:29, hold time is
180, keepalive interval is 60 seconds

```

```

Neighbor sessions:
  1 active, is multisession capable
Neighbor capabilities:
  Route refresh: advertised and received(new)
Four-octets ASN Capability: advertised and received
  Address family IPv4 Unicast: advertised and received
  Multisession Capability: advertised and received
Message statistics, state Established:
  InQ depth is 0
  OutQ depth is 0

          Sent        Rcvd
Opens:           1           1
Notifications:   0           0
Updates:         3           3
Keepalives:     229         230
Route Refresh:  0           0
Total:          233         234

```

*!--- Output omitted---!*

Als u de items in de BGP-routingtabel wilt tonen, gebruikt u de opdracht [ip bgp tonen](#).

## ip-bgp tonen

### In router R1

```

R1#sh ip bgp
BGP table version is 13, local router ID is 10.10.10.10
Status codes: s suppressed, d damped, h history, *
               valid, > best, I - internal,
               r RIB-failure, S Stale
Origin codes: I - IGP, e - EGP, ? - incomplete

```

Network	Next Hop	Metric	LocPrf
Weight Path

0 I			
*> 40.40.40.40/32	2.2.2.2		
0 10.1 I			
*> 192.168.100.0	0.0.0.0	0	
32768 I			
*> 192.168.200.0	0.0.0.0	0	
32768 I			

*!--- Note that the routes highlighted are received from the eBGP peer router R2 which is in 32-bit AS 10.1. In router R3*

```

R3#sh ip bgp
BGP table version is 11, local router ID is 3.3.3.3
Status codes: s suppressed, d damped, h history, *
               valid, > best, I - internal,
               r RIB-failure, S Stale
Origin codes: I - IGP, e - EGP, ? - incomplete

          Network        Next Hop        Metric LocPrf
Weight Path

```

```

*>i10.1.1.1/32      192.168.10.1          0    100
0 655361 I
*>i20.1.1.1/32      192.168.10.1          0    100
0 655361 I
*> 30.30.30.30/32   0.0.0.0              0
32768 I
*>i40.40.40.40/32   192.168.10.1          0    100
0 655361 I
*>i192.168.100.0    192.168.10.1          0    100
0 I
*>i192.168.200.0    192.168.10.1          0    100
0 I

```

*!--- The router R3 does not have bgp asnotation dot configured in it. Therefore, the route received from the router in 32-bit AS **AS 10.1** is displayed as **655361**.*

#### In router R4

```

R4#sh ip bgp
BGP table version is 7, local router ID is 4.4.4.4
Status codes: s suppressed, d damped, h history, *
valid, > best, I - internal,
          r RIB-failure, S Stale
Origin codes: I - IGP, e - EGP, ? - incomplete

```

Network Weight Path	Next Hop	Metric	LocPrf
*>i10.1.1.1/32 0 I	172.16.10.1	0	100
*>i20.1.1.1/32 0 I	172.16.10.1	0	100
*>i30.30.30.30/32 0 100 I	172.16.10.1	0	100
*> 40.40.40.40/32 32768 I	0.0.0.0	0	
*>i192.168.100.0 0 100 I	172.16.10.1	0	100
*>i192.168.200.0 0 100 I	172.16.10.1	0	100

*!--- The above output shows the entries in BGP routing table of router R4.*

Om bereikbaarheid tussen routers te controleren, gebruikt u de ping-opdracht.

#### pingelen

##### Van router R3

```

R3#ping 40.40.40.40

Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 40.40.40.40, timeout
is 2 seconds:
!!!!!
Success rate is 100 percent (5/5), round-trip
min/avg/max = 68/101/148 ms

```

##### Van router R4

```
R4#ping 30.30.30.30

Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 30.30.30.30, timeout
is 2 seconds:
!!!!!
Success rate is 100 percent (5/5), round-trip
min/avg/max = 56/89/112 ms
!---- The above output shows that End to End connectivity
is established between R3 and R4, where R3 is AS 100(16-
bit AS) and router R4 is in AS 10.1(32-bit AS).
```
