簡介

本文說明如何使用FTD 7.6在Firepower 4200防火牆系列中設定容器(多例項模式),並提供相關詳 細資訊。

必要條件、支援的平台、許可

最低軟體和硬體平台

Manager(s) and Version (s)	Application (ASA/FTD) and Minimum Version of Application	Supported Platforms
• FMC 7.6.0	• FTD 7.6.0	4200 Series 4215, 4225, 4245

附註:任何平台上的FDM都不支援多例項。

授權

- 功能許可證手動分配給每個例項,但每個4200系列裝置每個功能僅使用一個許可證。
 - 例如,對於一個具有3個FTD例項的4200系列,只要您位於同一個FMC上,您只需要一個URL許可證,而不管使用的例項數如何。
- 所有許可證按4200系列裝置使用,而不是按容器例項使用,前提是它們位於同一個FMC上。 因此,對於4200系列裝置上的所有例項,由於實施許可,建議您使用相同的FMC。

採用元件

本文件所述內容不限於特定軟體和硬體版本。

本文中的資訊是根據特定實驗室環境內的裝置所建立。文中使用到的所有裝置皆從已清除(預設))的組態來啟動。如果您的網路運作中,請確保您瞭解任何指令可能造成的影響。

背景資訊

- FTD已經在3100型號(以及9300和4100系列)上支援多執行例(MI),但並不支援4200系列。
- 在FMC中,僅在本機模式下支援4200型號。
- 在4200中沒有在7.4.x中建立多個例項的設定。
- 自7.4.1起,支援3100上的多例項(MI)。
 - 。例項可以使用FMC建立和管理(與9300和4100系列不同,必須使用FCM)。
 - ◎ 當處於MI模式時,可通過FMC的升級機箱GUI更新FXOS。
 - ·轉換到MI模式通過CLI完成。

新增內容

- 您可以調配和管理4200系列上的MI例項。
- FMC 適用於4200系列(MI模式)和FTD例項的單一管理解決方案
- 允許在FMC上為3100和4200系列裝置將本機裝置單次和批次轉換為MI模式。
- 目標市場:企業/大型企業 網際網路邊緣、資料中心

含FTD多例項支援的平台

Platform	FTD Version	FTD Multi-Instance Support	Management Solution
Virtual	-	No	-
FPR1000	-	No	-
FPR2100	(not supported in 7.6)	No	-
3105		No	
3110, 3120, 3130, 3140	FTD 7.4.1	Yes	FMC
FPR4100	FTD 6.3.0	Yes	FCM & FMC
4215, 4225, 4245	FTD 7.6.0	Yes	FMC
FPR9300	FTD 6.3.0	Yes	FCM & FMC

3100和4200系列之間的差異

- 4200有兩個管理介面,一個用於管理,另一個用於事件。
 - 。Management1/1和Management1/2介面均已引導到所有FTD容器例項。
 - 。一個或兩個管理介面可在MI模式下使用。
 - ◎ Management1/1同時適用於Management和Events,或
 - ◎ Management1/1可用於管理, Management1/2可用於事件, 在這種情況下:
 - 。需要定義靜態路由,以使用管理1/2介面路由流量。
- 由於大小較大,因此在4200上建立的例項比3100上建立的例項多。

支援的部署

- 使用獨立FTD例項管理4200系列(MI模式)
- 使用高可用性FTD例項管理4200系列(MI模式)*

附註:若是FPR4100系列,若是FTD-HA,則主要和次要節點必須位於兩個不同的4200系 列(MI模式)裝置上。此外,此版本不支援MI集群。

功能說明和演練

在7.6.0中對多例項配置的更改:

- 在MI模式下支援4200系列
- FMC中的更改,也與3100系列的MI模式管理有關:
 - 。在FMC中裝置從本地模式轉換到MI模式
 - ◎ 準備情況檢查,檢查裝置是否可以轉換為MI模式
 - 轉換後在FMC中自動註冊FTD例項

4200系列例項規格

最大例項支援

Platform	Maximum Instance Count	Maximum Logical CPU Cores Supported
FP4215	10	62
FP4225	15	126
FP4245	34	254

例項密度由兩個主要因素驅動:

1.給定平台上的CPU核心數量和磁碟空間量

2.這些資源中有多少可用於向例項提供資源。最小的例項大小需要3個物理CPU(6個邏輯)核心和 48 GB的磁碟空間。

FTD例項大小

Platform	4215	4225	4245
Total CPU cores	32	64	128
Available CPU cores for FTD	30	62	126
Total RAM (GiB)	222	445	875
FXOS RAM (GiB)	6	6	6
DMA RAM (GiB)	11	39	78
Available RAM for FTD (GiB)	7	7	7
Available Disk space for FTD (GiB)	660	864	1794
Max Instances	10	15	34

設定

組態概觀

- 1. 在FMC中註冊4200系列(本機模式)裝置。
- 2. 新增!在FMC上, 選擇裝置並將其從本機模式轉換為MI模式。
- 3. 新增!MI機箱在轉換後自動註冊到FMC。
- 4. 更新物理介面。
- 5. 建立FTD例項並分配介面。
- 6. 從FMC建立/更新/刪除埠通道和子介面。
- 7. 配置平台設定。
- 8. 將配置更改部署到裝置。
- 9. FTD例項自動註冊到FMC。

在FMC中將4200系列轉換為多例項模式

預設情況下,4200處於本機模式。要在FMC中將4200系列轉換為多例項模式,請執行以下操作:

- 1. 連線到裝置並建立管理器(已記錄)。
- 2. 將本機裝置註冊到FMC(已記錄)。
- 3. 使用FMC轉換為多例項。
- 4. 在FMC上, 選擇需要轉換為多例項的裝置, 並觸發轉換。可以選擇一個或多個裝置。

附註:在本機模式和MI模式之間切換將重置機箱上的所有配置。從MI模式轉換到本機模式仍然通過CLI。

轉換單個裝置

1.要開始轉換,請導航至Devices > Device management。

2.驗證所選裝置,然後按一下Continue:

conversion readiness checks to ensure device can be converted from Native to MI.

驗證所選裝置

3. 就緒性檢查和初始轉換:

Step 1: Set the name of the MI Chassis after conversion.	5 Threat De Convert to Multi-Instance Mode Selected device name 4215_Native_Chassis Configured device name *	Essentials, M Current selected device
	4215_Native_Chassis	Step 2: Hover over the icon next to the name to check whether the device is ready for conversion.
Step 3: Clic Instance to device.	k on Convert to Multi- start conversion for the

FMC機箱概述頁面

FMC機箱概述頁面概述

FMC機箱概述頁面提供了4200系列(MI模式)裝置的完整摘要。它包括:

- 裝置的圖形後面板檢視,包括可用的網路模組。
- 故障摘要及其重要性。
- 介面摘要、狀態。
- FTD例項摘要、狀態。
- 硬體統計資料 包括風扇、電源、記憶體、CPU使用率和儲存。

管理介面

Interfaces頁籤支援的操作:

- 更新物理介面。
- 建立/更新/刪除子介面。
- 建立/更新/刪除EtherChannel介面。
- 同步介面配置。
- 網路模組的OIR。
- 物理介面中斷/連線。

Interfaces頁籤摘要

		Cancel OK

管理子介面

從Add按鈕選擇子介面選項以新增新介面。

可以修改子介面的以下屬性:

- 父介面
- 埠型別(資料/資料共用)

子介面ID

• VLAN ID

Auto Negotiation	Admin FEC	Sub Interface
		EtherChannel Inte
Yes	Auto	
Add Sub Interface		0
Parent Interface		_
	~	
Port Type		
Data	~	
SubInterface ID		
		(1-4294967295)
VLAN ID		
		(1-4094)

管理EtherChannel

要建立新的EtherChannel介面,請使用Add按鈕下的「EtherChannel interface」。

可以為EtherChannel配置的屬性包括:

EtherChannel ID

- Port-Type(資料/資料共用)
- 成員介面
- 管理速度
- 管理雙工
- LACP模式
- LACP速率
- 自動交涉

		aces	Sync Device Add]
	Auto Negotiation	Admin FEC	Sub Interface EtherChannel Interface	ce
	Yes	Auto	/	
Add EtherChannel Interface	3	Add EtherChai	nnel Interface	
EtherChannel ID: (1-48) Port Type	Enabled	Interfaces Admin Duplex	Configuration	
Data Select Member Interface(s)	Selected Interfaces (0)	Full Admin Speed	~	
Available interfaces (7)	Selected interfaces (0)	LACP Mode		
Ethemet1/1		Active	~	
Ethernet1/2		LACP Rate		
Ethernet1/3		Default	~	
Ethernet1/4	Add	Auto Negoti	ation	
Ethernet1/5				Cancel OK
Eulemet 1/0				
	Cancel			

同步裝置配置

在某些情況下,FMC配置和裝置配置可能會不同步。一種情況是使用者刪除或插入netmod。在這種 情況下可以執行同步裝置。

Netmod熱交換/中斷支援

在文檔中使用的「熱插拔」在其他內部文檔中稱為「線上插入和刪除」或OIR。

啟用/禁用網路模組或中斷或加入介面時可以立即進行部署。多例項模式與本機模式中的4200系列模 式相同。

FMC將收到的響應與當前配置進行比較,然後建立介面更改通知供使用者確認。

4200本地支援EPM熱插拔和分支

EPM OIR和Breakout已在獨立本地模式安全防火牆4200系列上受支援。

4200系列EPM OIR和分支FMC文檔:

<u>https://www.cisco.com/c/en/us/td/docs/security/secure-firewall/hardware/4200/fw-4200-install/m-overview.html</u>

OIR:啟用/禁用EPM確認

使用者切換到啟用模組時,會顯示警告,以確保這不是偶然按一下。

				disable module
System Configuration	Network Mod	sule 1	Network Module 2	
	CONSOLE unknown USB	1/3 1/4 1/5 1/6 1/7 1/8 1/13 1/12 1/13 1/14 1/15 1/16 g Network Module On	× ***

	Are you sure you wa Turning the module o	nt to turn on the network module? on will add the associated interfaces to chas	Ssis. Disabled	
		No	Yes	

EPM啟用完成:已收到介面通知

- 啟用EPM時,會在裝置上關聯新介面。
- FMC接收有關關聯介面的通知。
- 在FMC上,使用者必須接受更改。

此螢幕截圖顯示了檢視關聯介面的選項:

System Configuration	1	A Inter	ace configuration has changed on	device. Click to know more.

pe	Instances	VLAN ID	Admin Speed	Admin Duplex	Admin State	Auto Nr
			1Gbps	Full	Enabled	Yes
			1Gbps	Full	Enabled	Yes

中斷/加入後介面更改

按一下Accept Changes後,這些介面在要使用的FMC中變為可用:

System Configuration	ſ	A Interface configuration ha	s changed on device. Click to kr	low more.	
	Interface Changes The following interface cha changes.	anges have been detected. C	heck if there is any impact on c	urrent configuration and accept	Shows interface changes after the break operation
	Interface Name Ethernet2/1	Type PhysicalInterface	Change Description	· · · ·	
pe Instances	Ethernet2/1/1	PhysicalInterface	Interface is associated		
	Ethernet2/1/2	PhysicalInterface	Interface is associated		
	Ethernet2/1/3	PhysicalInterface	Interface is associated		
				Close Accept Changes	

介面更改對例項的影響

Change	Behavior
Change a dedicated interface to shared	No validation error
Change a shared interface used in multiple instance to dedicated	Validation error will block the change
Disable of Network module with interfaces assigned to Instance	No validation error during the disable operation, but error will be thrown in case user tries to accept the notifications without removing the assignment from the instance
Break/Join of interfaces assigned to instance	 Validation error will be thrown to initiate such operation User needs to unassign the interfaces from the Logical Device before initiating Break/Join operation

例項管理

「例項管理」使您能夠:

- 在4200系列(MI模式)裝置上檢視所有現有FTD例項及其詳細資訊。
- 建立/更新具有所需CPU核心和軟體版本的FTD例項。
- 刪除現有FTD例項。
- 允許使用者為FTD例項選擇FTD策略 訪問策略和平台設定策略。
- 在FMC上線後,自動向FTD註冊例項。

View By All (: Group • • Error (0) • Warning (0) • Offline (0)	Normal (1) Deploy	yment Pendir	ng (0) • Upgrade (0)		٩	Search Device	Add 🔻

Click 'Manage' to view 4200 Series (MI mode) Chassis overview

建立例項

按一下Add Instance以啟動嚮導。

步驟1.協定:

步驟 2.

• 例項配置基礎知識:

Add Instance (1) Agreement (2) Instance Configuration	3 Interface 4 Device 5 Summary Assignment Management	Step 2 in instance creation wizard is to configure FTD instance.
Display Name * WA_instance_1 Device Version * 7.6.0.1208	Permit Expert mode for CLI Resource Profile* Default-Small +	Display name of FTD instance. FMC lists the device with the same name as on listing page.
IIV4 Management IP * 192.168.1.81 Network Mask * 255.255.255.0 Network Gateway * 192.168.1.254 Search Domain	DNS Servers Device SSH Password* 	Allows configuring core allocation for this FTD instance. You can pick a pre-defined resource profile (Default-Small, Default-Medium, or Default-Large) or make a new one. Use the '+' icon to define a custom resource profile object.
Routed	Cancer Dack	FTD version and build number. In 7.6.0, only possible version will be 7.6.0-XX.

• 例項配置IP:

Add Instance			Ø	Allows user to configure IPv4, IPv6 or Both IPv4
Agreement Agreement Configuration Display Name * WA_instance_1 Device Version * 7.6.0.1208 IPv4 IPv6 Both IPv4 I		(i) S	ummary	and IPV6 management IP address for FTD instance. Customer will be able to SSH to FTD device using this management IP address IPv6 Both IPv6
Search Domain	DNS Servers			IPv4 IPv6 Both
FQDN Firewall Mode *	Device SSH Password *			IPv6 IPv6 Management IP* Management IP* 192.168.1.81 2001:a00:192:168:1235 Network Mask * Prefx.*
Routed)		255.255.255.0 112
	Show Password			Network Gateway* Network Gateway*
		Cancel B	lack Next	192.168.1.254 2001:a00::192:168:1240

步驟3.介面分配:

(1) Agreement (2) Instance (3) Inter-	face (4) Device (5) Summary	×	Step 3 allows you to assign interfaces to FTD instance.
Available Interfaces (14)	Selected Interfaces (2) Ethernet1/2	7	Lists all available physical, sub-interfaces and port-channel interfaces.
Ethernet1/3	Ethernet1/4	÷ +	Lists all interfaces selected for this instance.
Ethernet1/5.12 C Ethernet1/9 C Ethernet1/10 C Ethernet1/11 C	»		Bulk add all and remove all interfaces. Moves all available interfaces as selected interfaces and vice-versa.
Ethernet1/13 Ethernet1/14 Ethernet1/15 Ethernet1/15	>>>	4	Delete icon allows you to remove interface from the Selected to Available lists.
Port-channel1		\downarrow	Add icon '+' allows you to add an available interface as selected interface.
	Cancel Back	Next	A share icon Indicates the interface is shared.

步驟4.裝置管理:

步驟5.總結:

Add Instance	(2) Instance	ree ④ Device ⑤ Summary Iment Management	ø	Last step towards creating an FTD instance. Summary tab allows you to review and edit configuration before staging it. (Final step is Deploy.)
Instance Configuration Name: Version: Resource Profile: IP; Mask: Gateway:	WA_instance_1 7.6.0.1208 Default-Small 192.168.1.81 255.255.255.0 192.168.1.254	Device Management - This into is required only during instance creation. Access Policy: Policy1 Device Group: Platform Policy: Licenses: Carrier, Malware Defense	·	Each tile summarizes sections of configuration performed in previous steps of the wizard.
Mode: Password: FQDN: DNS Servers: Search Domain: Expert Mode: Interface Assignment - 2 dec	routed disabled Koted and 0 shared interfaces attached <u>block</u>			Edit icon in each tile will navigate user
Name - Ethernet1/1		Port Type DATA		allowing them to edit configuration.
Ethernet1/2		DATA		
		Cancel Back	Save	Final step is to click 'Save'. Configuration will be staged in FMC.

要完成配置,請儲存並部署。

									1

步驟1.編輯FTD例項:

Edit Instance		
Instance Configuration	2 Interface Assignment 3 Summary	The Edit Instance dialog is like the Create Instance
Display Name * WA_instance_1	Admin State Permit Expert mode for CLI	wizard.
Device Version*	Resource Profile *	
7.6.0.1217 Both IPv4 IPv6 Both IPv4 Management IP * 192.168.1.81 Network Mask* 255.255.255.0 Network Gateway* 192.168.1.254	Default-Small ~ +	However, the user does not have the option to edit EULA, display name, or device version.
Search Domain	DNS Servers	
FQDN	Device SSH Password *	
Firewall Mode *	Confirm Password *	
Routed		Click on the 'Next' button to edit interface assignments

步驟2.編輯例項的介面分配:

Edit Instance

vailable Interfaces (7)			Selected Interfaces (2)	
Ethernet1/3	-0		Ethernet1/1	i
Ethernet1/4	0		Ethernet1/2	i
Ethernet1/5	0			
Ethernet1/6	0			
Ethernet1/8	0			
Ethernet1/8.10	0			
Port-channel2	0			
		>>		
		"		

The next step allows the user to modify interface assignments. User can add new interface or remove existing interfaces.

0

Click on the 'Next' button to view a summary of changes made to the instance

步驟3.編輯例項摘要:

- Instance Configurat	ion 2	tterface Assignment 3 Summary	
stance Configuration			
Name:	WA_instance_1		
Version:	7.6.0.1217		
Resource Profile:	Default-Small

Mask:	255.255.255.0		
Gateway:	192.168.1.254		
Mode:	routed		
Password:			
FQDN:			
DNS Servers:			
Search Domain:			
Search Domain: Expert Mode: reface Assignment - 24	disabled	wd <u>liste</u>	
Search Domain: Expert Mode: terface Assignment - 2 of Name - Ethernet1/1	disabled bolicated and 0 shared interfaces attac	Port Type DATA	
Search Domain: Expert Mode: erface Assignment - 2 of Name • Ethernet1/1 Ethernet1/2	disabled	Port Type DATA DATA	
Search Domain: Expert Mode: erface Assignment - 2 (Name - Ethernet1/1 Ethernet1/2	disabled	ed Hole Port Type DATA DATA	
Search Domain: Expert Mode: erface Assignment - 2 (Name • Ethernet1/1 Ethernet1/2	disabled	ed 1555 Port Type DATA DATA	
Search Domain: Expert Mode: erface Assignment - 2 (Name - Ethernet1/1 Ethernet1/2	disabled	ed Hale Port Type DATA DATA	

The last step of editing an instance is to view the summary of changes made to the instance.

Each tile has a pencil icon that navigates user to respective section of the edit steps.

Click the 'Save' button to stage the configuration changes in FMC. The user can review and deploy the changes at a later point in time.

刪除例項

Chassis Cisco Secure Fire	Manage ewall 4215 Thr nterfaces	er: 4215 eat Defense Mu Instances	-WA_chass	SIS Connected						Sav	Cancel
									् Search a	an instance	Add Instance
Name			Version	Resource Profile	Management IP	Management Gateway	Licenses	AC Policy		Platform Settings	Delete
> © WA_insta	ance_1		7.6.0.1217	Default-Small	192.168.1.81	192.168.1.254	Carrier,	Pol		N.A	Cancel

Use the Delete option (from the trash can icon) to delete an existing instance.

Deleting an instance will stage the changes in FMC. Clicking delete will not impact device unless configuration saved and then deployed.

Deleting an instance will free up core allocation.

SNMP組態

導航到用於配置SNMP的系統配置頁籤:

機箱匯入/匯出

匯出配置

導覽至Manage Chassis > System Configuration > Import/Export:

匯入配置

導覽至Manage Chassis > System Configuration > Import/Export:

有關機箱匯入/匯出的注意事項

- 機箱上的所有現有配置都將由匯入檔案中的配置替換。
- 匯入配置的平台軟體版本必須與匯出的版本相同。
- 進行匯出時, 匯入配置的機箱必須安裝相同數量的網路模組。
- 匯入配置的機箱必須為邏輯裝置安裝相同的應用程式映像。
- 不匯出特定於應用程式的配置設定。僅匯出機箱配置。
- 需要單獨進行FTD例項備份。

機箱平台設定策略

機箱平台設定策略允許使用者配置以下平台特定配置:

- 時間同步(NTP)
- DNS
- 系統日誌
- 時區
- 使用者可以建立新的「機箱平台設定」策略,並將其分配到多個4200系列(MI模式)機箱。

提示:機箱平台設定僅適用於機箱。如果使用者想要將平台設定應用於其例項,則可以使 用威脅防禦平台設定策略。

1.導航到機箱平台設定策略:

4215_WA_Chassis	Firewall 4215 Threat Defense Multi-Instance Supervisor	7.6.0	Manage	N/A	N/A	N/A	Delete
							Health Monitor Troubleshoot Files
Click 'Delete' to unregister 4200 Ser mode) device from FMC	ries (MI						

從多例項轉換為本機模式

目前,FMC僅支援從本機到多例項的轉換。因此,要將裝置轉換回本機模式,使用者必須使用 CLI。

步驟 1:從FMC中註銷機箱。

步驟 2:使用此CLI命令將4200系列裝置轉換為本機模式:

firepower-4215# scope system
firepower-4215 /system # set deploymode native

FMC Rest API

FMC公共REST API可用於FMC支援的所有操作。

Chassis	~
GET /api/fmc_config/vl/domain/{domainUUID}/chassis/fmcmanagedchassis/{objectId}	
DELETE /api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{objectId}	
GET /api/fmc_config/vl/domain/{domainUUID}/chassis/fmcmanagedchassis	
POST /api/fmc_config/vl/domain/{domainUUID}/chassis/fmcmanagedchassis	
<pre>GET /api/fmc_config/vl/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/networkmodules/{objectId}</pre>	
PUT /api/fmc_config/vl/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/networkmodules/{objectId}	
<pre>PUT /api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/operational /syncnetworkmodule</pre>	
GET /api/fmc_config/vl/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/interfaces/{interfaceUUID}	
<pre>/api/fmc_config/vl/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/chassisinterfaces/{interfaceUUID}</pre>	
<pre>post /api/fmc_config/vl/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/operational /breakoutinterfaces</pre>

PUT /api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/logicaldevices/{objectId}	
DELETE /api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/logicaldevices/{objectId}	
GET /api/fmc_config/vl/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/logicaldevices	
POST /api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/logicaldevices	

用於原生到多例項轉換的REST API

POST API驗證本地裝置是否準備好進行多例項轉換:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/operational/switchmodereadinescl

POST請求JSON示例:

```
{
   "devices": [
      {
        "id": "DeviceUUID",
        "type": "Device"
      }
   ],
   "conversionType": "NATIVE_TO_MULTI_INSTANCE"
}
```

POST API以觸發單個本機到多例項轉換:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/operational/switchmode

```
POST請求JSON示例:
```

{

", "displayName": "Sample_Chassis_Name1" }], "conversionType": "NATIVE_TO_MULTI_INSTANCE" }

POST API以觸發批次本機多例項轉換:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/operational/switchmode POST請求JSON示例:

```
"items": [
{
"id": "
", "displayName": "Sample_Chassis_Name1" }, { "id": "
```

", "displayName": "Sample_Chassis_Name2" }], "conversionType": "NATIVE_TO_MULTI_INSTANCE" }

適用於機箱管理的REST API

POST向管理中心新增機箱:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis

獲取所有機箱:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/

通過uuid獲取特定機箱:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{objectId}

通過uuid刪除機箱:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{objectId}

POST請求JSON示例:

```
{
    "type": "FMCManagedChassis",
    "chassisName": "CHASSIS123",
    "chassisHostName": "192.168.xx.74",
    "regKey": "*****"
}
```

用於管理網路模組(網路模組)的REST API

通過uuid獲取網路模組:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/networkmodules/

獲取所有網路模組:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/networkmodules/

PUT — 按uuid編輯現有網路模組:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/networkmodules/

PUT — 從FXOS檢索網路模組資料並更新管理中心:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/operational/syncr

GET響應示例

```
},
"links": {
    "self": "https://u32c01p10-vrouter.cisco.com:32300/api/fmc_config/v1/domain/e276abec-e0f2-11e3-8169
},
"id": "0050568A-3F3F-0ed3-0000-************,
"moduleState": "ENABLED",
"type": "NetworkModule",
"type": "NetworkModule",
"description": "Cisco FPR 8X1G 8X10G 1RU Module",
"model": "FPR-3120",
"operationState": "ok",
"numOfPorts": 16,
"slotId": "1",
"vendor": "Cisco Systems, Inc.",
"name": "Network Module 1"
```

```
}
```

用於例項管理的REST API

POST向管理中心新增機箱:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/logicaldevices

獲取所有機箱:

```
/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/logicaldevices
```

通過uuid獲取特定例項:

```
/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/logicaldevices/{ol
```

PUT — 按uuid編輯例項:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/logicaldevices/{ol

通過uuid刪除機箱:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/logicaldevices/{olegative-states} PUT請求示例:

```
{
    "name": "ftd1",
    "operationalState": "string",
    "deviceRegistration": {
        "licenseCaps": [
            "MALWARE",
            "URLFilter",
            "CARRIER",
            "PROTECT"
    ],
        "accessPolicy": {
            "name": "AC Policy name",
            "id": "
```

", "type": "AccessPolicy" }, "deviceGroup": { "name": "DeviceGroup name", "id": "

```
", "type": "DeviceGroup" } }, "managementBootstrap": { "ipv4": { "gateway": "192.168.xx.68", "ip
```

```
", "type": "ChassisInterface" }, { "name": "Ethernet2/2.1", "id": "
```

```
", "type": "ChassisInterface" } ], "type": "LogicalDevice" }
```

適用於SNMP管理的REST API

通過uuid獲取SNMP設定:

```
/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/snmpsettings/{ob
```

```
/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/snmpsettings/
```

PUT — 按uuid編輯現有網路模組:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/snmpsettings/{ob GET響應示例:

```
{
    "snmpAdminInstance": {
        "id": "logicalDeviceUuid",
        "type": "LogicalDevice",
        "name": "ftd3"
    },
    "id": "snmpsettingsUUID2",
    "type": "SnmpSetting"
```

用於獲取摘要的REST API

此清單包含有關用於獲取摘要的REST API的詳細資訊:

- 故障
- 例項
- 庫存
- 介面
- 應用資訊

獲取機箱的GET故障摘要:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/faultsummary

響應示例:

{ "links": { "self": "

/api/fmc_config/v1/domain/domainUUID/chassis/fmcmanagedchassis/containerUUID/faultsummary?offset=

機箱的GET例項摘要:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/instancesummary

響應示例:

{ "links": { "self": "

}

獲取機箱的庫存摘要:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/inventorysummar 響應示例:

{ "links": { "self": "

/api/fmc_config/v1/domain/domainUUID/chassis/fmcmanagedchassis/containerUUID/inventorysummary?off

獲取機箱的GET介面摘要:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/interface摘 要

響應示例:

```
{
"links": {
"self": "
```

/api/fmc_config/v1/domain/domainUUID/chassis/fmcmanagedchassis/containerUUID/interfacesummary?off

獲取機箱的應用資訊:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID} /inventorysummary

```
{
"links": {
"self": "
```

/api/fmc_config/v1/domain/domainUUID/chassis/fmcmanagedchassis/containerUUID/appinfo?offset=0&lim

適用於介面管理的REST API

本節提供了有關用於介面配置管理的REST API的詳細資訊:

- 用於修改介面配置的URL
- 用於介面中斷/加入的URL
- 用於同步裝置配置的URL

更新物理介面

為了支援物理介面的更新,引入了這些URL。

GET all physical interfaces:

```
/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/物理介面
```

通過介面uuid獲取特定物理介面:

```
/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/physicalinterface s/{interfaceUUID}
```

按介面uuid更新介面:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/physicalinterface s/{interfaceUUID}

物理介面模型如下所示:

```
{
    "metadata": {
        "supportedSpeed": "TEN_GBPS,ONE_GBPS,TWENTY_FIVE_GBPS,DETECT_SFP",
        "mediaType": "sfp",
        "sfpType": "none",
```

```
"isBreakoutCapable": false,
   "isSplitInterface": false,
   "timestamp": 1692344434067,
   "domain": {
     "name": "Global",
     "id": "e276abec-e0f2-11e3-8169-********",
     "type": "Domain"
   }
 },
  "type": "PhysicalInterface",
  "name": "Ethernet2/2",
  "portType": "DATA",
  "adminState": "DISABLED",
  "hardware": {
   "flowControlSend": "OFF",
   "fecMode": "AUTO",
   "autoNegState": true,
   "speed": "DETECT_SFP",
   "duplex": "FULL"
 },
  "LLDP": {
   "transmit": false,
   "receive": false
 },
 }
```

配置子介面

為了支援子介面管理,引入了這些URL。

GET all sub interfaces:

```
/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/子介面
```

通過介面uuid獲取特定子介面:

```
/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/subinterfaces/{int
```

POST新子介面:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/子介面

UPDATE interface by interface uuid :

```
/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/subinterfaces/{int
```

通過介面uuid刪除子介面:

```
/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/subinterfaces/{int
子介面模型如下所示:
```

```
{
  "metadata": {
   "isBreakoutCapable": false,
   "isSplitInterface": false,
   "timestamp": 1692536476265,
   "domain": {
     "name": "Global",
     "id": "e276abec-e0f2-11e3-8169-*******",
     "type": "Domain"
   }
 },
  "type": "SubInterface",
  "name": "Ethernet1/3.3",
  "portType": "DATA",
  "subIntfId": 3,
  "parentInterface": {
   "type": "PhysicalInterface",
   "id": "00505686-9A51-0ed3-0000-********",
   "name": "Ethernet1/3"
 },
 "vlanId": 3,
  }
```

配置EtherChannel介面

為了支援etherchannel EtherChannel介面的管理,引入了這些URL。

GET所有etherchannel介面:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/etherchannelinter

通過介面uuid獲取特定的etherchannel介面:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/etherchannelinter

對新的etherchannel介面進行開機自檢:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/etherchannel介 面

UPDATE interface by interface uuid :

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/etherchannelinter

通過介面uuid刪除etherchannel介面:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/etherchannelinter

EtherChannel介面模型如下所示:

```
"supportedSpeed": "HUNDRED_MBPS, TEN_MBPS, ONE_GBPS",
  "timestamp": 1692536640172,
  "domain": {
    "name": "Global",
    "id": "e276abec-e0f2-11e3-8169-*******",
    "type": "Domain"
  }
},
"type": "EtherChannelInterface",
"name": "Port-channel45",
"portType": "DATA",
"etherChannelId": 45,
"selectedInterfaces": [
  {
    "type": "PhysicalInterface",
    "id": "00505686-9A51-0ed3-0000-*******",
    "name": "Ethernet1/4"
  },
  {
    "type": "PhysicalInterface",
    "id": "00505686-9A51-0ed3-0000-********",
    "name": "Ethernet1/5"
  }
],
"lacpMode": "ON",
"lacpRate": "FAST",
"adminState": "DISABLED",
"hardware": {
  "flowControlSend": "OFF",
  "autoNegState": true,
  "speed": "ONE_GBPS",
  "duplex": "FULL"
},
"LLDP": {
  "transmit": true,
  "receive": true
},
"id": "00505686-9A51-0ed3-0000-********
```

REST API中斷/加入介面

為了支援4200系列中介面的分組/連線,可以使用以下URL:

GET:

}

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/chassisinterfaces

評估介面中斷/連線的可行性

POST:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/operational/break

中斷介面

POST:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/operational/joinin 連線一組斷開的介面

用於介面中斷的REST流

1.使用fmcmanagedchassis終結點查詢FMC管理的機箱裝置(4200)。

GET /api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis

返回FMC管理的機箱裝置清單以及多例項裝置,並返回每個裝置的ID、名稱、型號等詳細資訊。選 擇「多例項」裝置。

響應示例:

```
{
    "id": "fcaa9ca4-85e5-4bb0-b049-*******",
    "type": "FMCManagedChassis",
    "chassisName": "192.168.0.75",
    "chassisMode": "MULTIINSTANCE",
    "links": {
        "self": "https://u32c01p06-vrouter.cisco.com:22512/api/fmc_config/v1/domain/e276abec-e0f2-11e3-8169
    }
}
```

2.使用介面/物理介面端點檢查介面是否支援中斷。

只有當「isBreakoutCapable」為true且mediaType為QSFP時,才能進行中斷。

GET

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/interfaces

響應示例:

```
{
 "metadata": {
   "mediaType": "qsfp",
                                     "sfpType": "none",
   "isBreakoutCapable": true,
                                     "breakoutFactor": "4",
                                     "isSplitInterface": false,
   "timestamp": 1692344434067,
   "domain": {
    "name": "Global",
    "id": "e276abec-e0f2-11e3-8169-*******",
    "type": "Domain"
   }
 },
```

```
"type": "PhysicalInterface",
  "name": "Ethernet2/4",
  "portType": "DATA",
  "adminState": "DISABLED",
  "hardware": {
    "flowControlSend": "OFF",
    "fecMode": "AUTO",
    "autoNegState": true,
    "speed": "DETECT_SFP",
    "duplex": "FULL"
  },
  "LLDP": {
    "transmit": false,
    "receive": false
  },
  "id": "00505686-9A51-0ed3-0000-********
}
```

3.在介面上,使用evaluateoperation端點評估break操作的可行性。

GET

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/chassisinterfaces

如果響應中沒有警告/錯誤,使用者可以執行中斷操作。

響應示例:

如果響應中存在錯誤,則不允許使用者執行break操作:

```
"links": {
    "self": "https://u32c01p06-vrouter.cisco.com:22542/api/fmc_config/v1/domain/e276abec-e0f2-11e3-8169
},
    "type": "ChassisInterface",
    "id": "00505686-662F-0ed3-0000-*******"
}
```

4.如果介面支援中斷,並且就緒狀態為「就緒」,請使用中斷介面終結點中斷介面。

POST

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/operational/break

請求:

```
回應:
```

5.使用中斷響應中的任務ID跟蹤任務完成情況。將Task狀態設定為「Interface Notification received」。

GET /api/fmc_config/v1/domain/{domainUUID}/job/taskstatuses/{objectId}

```
{
    "metadata": {
        "task": {
```

```
"id": "4294969699",
     "links": {
       "self": "https://u32c01p06-vrouter.cisco.com:22542/api/fmc_config/v1/domain/e276abec-e0f2-11e3-
     }
   }
 },
 "targetInterfaces": [
   {
     "id": "00505686-662F-0ed3-0000-*******",
     "type": "PhysicalInterface"
   }
 ],
 "type": "BreakoutInterface"
}
{
 "id": "4294969716",
 "type": "TaskStatus",
 "links": {
   "self": "https://u32c01p06-vrouter.cisco.com:22542/api/fmc_config/v1/domain/e276abec-e0f2-11e3-8169
 },
 "taskType": "DEVICE_DEPLOYMENT",
 "status": "Interface notification received"
}
```

6.使用chassisinterfaceevents端點獲取介面更改。

GET /api/fmc_config/v1/domain/{domainUUID}/chassis/ fmcmanagedchassis/{containerUUID}/chassisinterfaceevents

響應示例:

```
Ε
  {
    "change": "Interface is deleted",
    "type": "PhysicalInterface",
    "state": "DISASSOCIATED",
    "name": "Ethernet2/3"
  },
  {
    "change": "Interface is associated",
    "type": "PhysicalInterface",
    "state": "ASSOCIATED",
    "name": "Ethernet2/3/2"
  },
  {
    "change": "Interface is associated",
    "type": "PhysicalInterface",
    "state": "ASSOCIATED",
    "name": "Ethernet2/3/3"
  },
  {
    "change": "Interface is associated",
    "type": "PhysicalInterface",
    "state": "ASSOCIATED",
    "name": "Ethernet2/3/4"
```

7.如果未收到介面通知,請使用機箱介面事件終結點同步裝置,並檢查是否有掛起的更改。

POST /api/fmc_config/v1/domain/{domainUUID}/devices/devicereces/{containerUUID}/機箱介面事件

請求:

```
{
    "action": "SYNC_WITH_DEVICE"
}
```

回應:

```
{
    "action": "SYNC_WITH_DEVICE",
    "hasPendingChanges": true
}
```

8.收到通知後,使用chassisinterfaceevents端點接受更改。

POST /api/fmc_config/v1/domain/{domainUUID}/devices/devicereces/{containerUUID}/機箱介面事件

請求:

```
{
    "action":"ACCEPT_CHANGES"
}
```

9.獲取所有機箱介面,並使用介面端點查詢拆分(中斷)介面。

```
GET
```

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/interfaces

一個40G介面(如eth2/2)被拆分為4x10G介面— eth2/2/1、eth2/2/2、eth2/2/3和eth2/2/4

用於介面連線的REST流

1.使用介面/物理介面終結點檢查介面是否已斷開。

只有當「isSplitInterface」為true且mediaType為SFP時,才能執行加入操作

GET

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/interfaces

```
{
  "metadata": {
    "supportedSpeed": "TEN_GBPS,DETECT_SFP",
   "mediaType": "sfp",
    "sfpType": "none"
    "isBreakoutCapable": false,
    "breakoutFactor": "4",
    "isSplitInterface": true,
    "timestamp": 1692541554935,
    "domain": {
      "name": "Global",
      "id": "e276abec-e0f2-11e3-8169-*******",
      "type": "Domain"
    }
 },
  "type": "PhysicalInterface",
  "name": "Ethernet2/3/4",
  "portType": "DATA",
  "adminState": "DISABLED",
  "LLDP": {
    "transmit": false,
    "receive": false
 },
  "hardware": {
   "flowControlSend": "OFF",
   "speed": "DETECT_SFP",
   "duplex": "FULL",
    "fecMode": "AUTO"
    "autoNegState": true
 },
  "id": "00505686-662F-0ed3-0001-********
}
```

2.使用四個拆分介面之一上的evaluateoperation終結點評估Join操作的可行性。

GET /api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/chassisinterfaces/{interfaceUUID}/evaluateoperation

• 如果響應中沒有警告/錯誤,使用者可以執行加入操作。

• 如果響應中存在錯誤,則不允許使用者執行加入操作。

```
{
  "operationType": "JOIN",
  "interfaceUsages": [
    {
      "conflictType": "Interface used in EtherChannel Configuration",
      "severity": "ERROR",
      "description": "Interface (Ethernet2/3/4) referred to in Ether Channel Interface (Port-channel32)
    }
 ],
  "readinessState": "NOT_READY",
  "links": {
    "self": "https://u32c01p06-vrouter.cisco.com:22542/api/fmc_config/v1/domain/e276abec-e0f2-11e3-8169
 },
 "type": "ChassisInterface",
  "id": "00505686-662F-0ed*****************
}
```

3.如果介面已損壞,並且就緒狀態為「READY」,則使用joininterfaces端點加入介面。 Interface_uuid可以是4個中斷介面中任意一個的ID。

POST/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/operational

請求:

```
回應:
```

```
{
    "metadata": {
        "task": {
            "id": "4294970217",
            "links": {
                 "self": "
```

}

4.使用加入響應中的任務ID跟蹤任務完成情況。將Task狀態設定為「Interface Notification received」。

GET /api/fmc_config/v1/domain/{domainUUID}/job/taskstatuses/{objectId}

回應:

```
{
   "id": "4294970237",
   "type": "TaskStatus",
   "links": {
        "self": "https://u32c01p06-vrouter.cisco.com:22542/api/fmc_config/v1/domain/e276abec-e0f2-11e3-8169
   },
   "taskType": "SSP_EPM_OIR",
   "message": "Deployment status for 19d967e6-xxxx-xxxx-85ff6cef6d3f: SUCCEEDED",
   "status": "Interface notification received"
}
```

5.使用chassisinterfaceevents端點獲取介面更改。

GET

/api/fmc_config/v1/domain/{domainUUID}/devices/devicereces/{containerUUID}/chassisinterfaceevents

回應:

```
Ε
  {
    "change": "Interface is associated",
    "type": "PhysicalInterface",
"state": "ASSOCIATED",
    "name": "Ethernet2/3"
  },
  {
    "change": "Interface is deleted",
    "type": "PhysicalInterface",
    "state": "DISASSOCIATED",
    "name": "Ethernet2/3/1"
  },
  {
    "change": "Interface is deleted",
    "type": "PhysicalInterface",
    "state": "DISASSOCIATED",
```

```
"name": "Ethernet2/3/2"
},
{
    "change": "Interface is deleted",
    "type": "PhysicalInterface",
    "state": "DISASSOCIATED",
    "name": "Ethernet2/3/3"
},
{
    "change": "Interface is deleted",
    "type": "PhysicalInterface",
    "state": "DISASSOCIATED",
    "name": "Ethernet2/3/4"
}
```

6.如果未收到介面通知,請使用chassisinterfaceevents終結點同步裝置,並檢查是否有掛起的更改

o

POST

/api/fmc_config/v1/domain/{domainUUID}/devices/devicereces/{containerUUID}/chassisinterfaceevents

請求:

```
{
    "action":"SYNC_WITH_DEVICE"
}
```

回應:

```
{
    "action":"SYNC_WITH_DEVICE",
    "hasPendingChanges":true
}
```

7.收到通知後,使用chassisinterfaceevents端點接受更改。

POST

/api/fmc_config/v1/domain/{domainUUID}/devices/devicereces/{containerUUID}/chassisinterfaces事件

請求:

```
{
    "action":"ACCEPT_CHANGES"
}
```
8.獲取所有機箱介面,並使用介面端點查詢連線的介面以及其他介面。

GET

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/interfaces

假設在10G介面eth2/2/1上啟動了Join,則響應中會有一個40G介面eth2/2。

同步裝置REST API

為了支援網路模組和介面的同步,引入了這些URL。

POST:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/chassisinterface 件

有負載

{"action":"SYNC_WITH_DEVICE"} - >觸發同步

{"action":"ACCEPT_CHANGES"} - >接受更改

GET:

/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/chassisinterface 件

列出生成的已更改事件

疑難排解/診斷

FXOS記錄

如果註冊失敗,這些FXOS CLI可用於檢查sftunnel和sfipproxy進程是否已啟動。

firepower# connect local-mgmt firepower-4215(local-mgmt)# show processes | include sftunnel grep: (standard input): binary file match 3323 root 20 0 80328 2024 1544 S 0.0 0.0 0:11.53 /opt/cisco/sftunnel/sfipproxy -d -f /etc/sf/sfipproxy. 22066 root 20 0 376880 7140 5944 S 0.0 0.0 0:41.18 /opt/cisco/sftunnel/sftunnel -d -f /etc/sf/sftunnel.

如果使用終端控制檯作為CLI,則通過使用所示的此CLI將終端寬度設定為適當的值,確保show processes的輸出不會被截斷:

如果SFTunnel進程已啟動且正在運行,但註冊失敗,則可以使用這些命令來查詢失敗的任何潛在原 因。

從connect local-mgmt在FXOS中引入新的CLI,以便檢視/opt/cisco/platform/logs/sfmessages中的 系統日誌消息

firepower# connect local-mgmt
firepower(local-mgmt)# tail-mgmt-log sfmessages

Dec 9 18:31:17 firepower Ipc [30483]: add ep: 1,0x5613aa0e2fe8 total = 1 Dec 9 18:31:17 firepower

FMC記錄

- 如果裝置註冊失敗,請在此位置找到usmsharedsvcs.log和vmssharedsvcs.log,並查詢字串「CHASSIS DISCOVERY」或「NATIVE_TO_MULTI_INSTANCE」以查詢失敗的可能原因。
 - ◎ 此外,請檢視/var/log/action_queue.log和/var/sf/messages以瞭解SFTunnel問題。
 - /var/opt/CSCOpx/MDC/log/operation/usmsharedsvcs.log
 /var/opt/CSCOpx/MDC/log/operation/vmssharedsvcs.log
- 如果機箱自動註冊失敗,請查詢usmsharedsvcs.log和vmssharedsvcs.log,然後查詢字串「CHASSIS DISCOVERY」和「NATIVE_TO_MULTI_INSTANCE」以查詢可能的失敗原因。
- 如果例項自動註冊失敗,請查詢usmsharedsvcs.log和vmssharedsvcs.log,然後查詢字串「 MI_FTD_INSTANCE_AUTO_REGISTRATION」以查詢失敗的可能原因。
- 如果裝置上存在部署失敗,請導航到部署 >部署歷史記錄 >按一下失敗的部署 >開啟 指令碼。此檔案包含失敗的原因。

機箱疑難排解

FMC支援從裝置管理頁面生成機箱故障排除(FPRM)。

- 與FTD裝置類似,機箱裝置也有疑難排解選項,可產生機箱疑難排解,並允許使用者從 FMC下載疑難排解套件組合。
- 這將從機箱收集「show tech-support form」捆綁包:

Name	Model	Version	Chassis	Licenses	Access Control Policy	Auto RollBack	
✓ Ungrouped (2)							
4215_WA_chassis 192.168.1.80	Firewall 4215 Threat Defense Multi-Instance Supervisor	7.6.0	Manage	N/A	N/A	N/A	✓ : Delete
WA_Instance_1 Snort 3 192.168.1.81 - Routed	Firewall 4215 Threat Defense	7.6.0	N/A	Essentials, Malware (1 more)	Pol	49	Health Monitor Troubleshoot Files

機箱故障排除進度及下載:

	Deployments Upgrades 🛛 Health Tasks 土 💽 Show Pop-up Notifications 🕦
	12 total 0 waiting 2 running 0 retrying 10 success 0 failures Q. Filter
 Task Manager messages show the progress of troubleshoot generation. 	Chassis Generate Troubleshooting Files Generate troubleshooting files for 4215_WA_chassis Remote status: Generating troubleshoot files
 Once completed, the user can download the troubleshoot bundle. 	Deployments Upgrades Image: Health Tasks Image: Tas

排查演練中的問題示例

在FMC中自動註冊機箱故障

問題:在FMC中自動註冊機箱失敗。

預期結果:

• 轉換從FMC開始後,預計在FMC中取消註冊和自動註冊。

實際結果:

• 機箱自動註冊失敗

疑難排解

1.檢查轉換:

- 確保已在FMC上觸發轉換。
- 登入到裝置並檢查裝置是否已轉換為容器模式。
- 運行命令檢視裝置是否已轉換:

2.檢查裝置管理器:

• 檢查裝置管理器是否已正確設定:

firepower# show device-manager Device manager: Name: manager Hostname: 10.10.xx.xx NAT id: 3ab4bb1a-d723-11ee-a694-89055xxxxxxx Registration Status: Completed Error Msg:

3. 要檢查的日誌:

3.1.導航至/var/opt/CSCOpx/MDC/log/operation/vmssharedsvcs.log和 /var/opt/CSCOpx/MDC/log/operation/usmsharedsvcs.log

3.2.在檔案中搜尋關鍵字「NATIVE_TO_MI_CONVERSION」和「CHASSIS DISCOVERY」,查詢 失敗的原因。

在FMC中自動註冊例項

問題:在FMC中例項自動註冊失敗。

預期結果:

• 從FMC調配例項後,該例項預計在FMC中自動註冊

實際結果:

• 例項自動註冊失敗

疑難排解

- 確保在建立例項後觸發部署。
 - ◎ 如果未完成部署,請確保將更改部署到裝置。
 - □ 如果部署失敗,請轉到Deployment History ->按一下Transcript。檢查失敗原因,修復並 重試部署。
- 確保該例項已安裝且其運行狀態為聯機。您可以使用機箱的摘要頁面檢查例項調配的狀態。

Name blr_instance1 Coperational state Contine Coperational state Coperational s	Core Utilization	14 Of 64 Cores Used	Dec-2022 09:52 Instances	Live status at: 2		
Management IP 192.168.1.88 52 atec Cores used 8 10/0 - Critical A 1/1 - Warning Lip: 1	Name blr_instance1 Operational state online	Hide details		2 Instances Found		
0/0 - Critical ▲ 1/1 - Warning Online ▲ Error Offline	Management IP 192.168.1.88 52 Interf	faces	List of online instances blr_instance1 online	2 0 0

- 使用以下命令檢查SFTunnel是否已在例項FTD上啟動並運行:
- ps -ef | grep -i "sftunnel"
 - 如果SFTunnel未運行,請嘗試執行重新啟動命令:

pmtool restartById sftunnel

- 導航至/var/opt/CSCOpx/MDC/log/operation/vmssharedsvcs.log和 /var/opt/CSCOpx/MDC/log/operation/usmsharedsvcs.log
- 在檔案中搜尋關鍵字「MI_FTD_INSTANCE_AUTO_REGISTRATION」,查詢失敗的原因。

FMC中的本機裝置註冊

問題:將裝置轉換回本機模式後,FMC中的本機裝置註冊失敗

- 如果使用者將機箱(MI模式)轉換回本機模式,但忘記從FMC中刪除機箱,則裝置會在 FMC上離線。
- 如果使用者嘗試將此本機裝置重新註冊回FMC,則註冊失敗。

疑難排解

- 在將裝置轉換回本機模式之前,確保已從FMC中刪除了機箱條目。
- 刪除條目後,嘗試將本機裝置重新註冊到FMC。

獨立或高可用性

• 與本機模式中的4200類似,提供兩個物理管理埠以支援管理流量的介面冗餘,或支援用於管

理和事件的獨立介面。

- 9300和4100裝置以及4200系列具有雙管理介面。第二個管理介面Management 1/2專供 您用於事件。
- 在多例項(也稱為「容器」)模式下,您可以在每個例項中的威脅防禦CLI上配置此介面。為 每個例項分配同一網路上的IP地址。
- 當處於容器模式時,每個FTD例項都自動分配了管理1/1和管理1/2介面。
 - 第二個管理介面預設處於禁用狀態。
 - 無法使用FMC設定Management1/2;您必須透過FTD CLISH(在9300/4100上)對其進行 設定。相反,在FXOS CLI中完成)。將此命令與所需的IP地址型別、地址、子網和靜態 路由配合使用:

configure network ipv4 manual 192.168.0.xx 255.255.255.0 192.168.0.1 management1
