# CONTENTS

# Cisco Remote PHY Device IPv6

### Finding Feature Information

Your software release may not support all the features documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the Feature Information Table at the end of this document.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to http://tools.cisco.com/ITDIT/CFN/. An account on http://www.cisco.com/ is not required.

# Hardware Compatibility Matrix for Cisco Remote PHY Device

**Note** The hardware components introduced in a given Cisco Remote PHY Device Software Release are supported in all subsequent releases unless otherwise specified.

*Table 1: Hardware Compatibility Matrix for the Cisco Remote PHY Device*

| Cisco HFC Platform | Remote PHY Device |
|---|---|
| **Cisco GS7000 Node** | **Cisco 1x2 RPD Software 1.1 and Later Releases** <br><br> Cisco Remote PHY Device 1x2 <br><br> • PID—RPD-1X2= <br><br> • PID—RPD-1X2-PKEY= |

| | |
|---|---|
| **Note** | The -PKEY suffix in the PID indicates units that enable the SCTE-55-2 Out-of-Band protocol support. |

# Information about RPD IPv6

The CableLabs' MHAv2 standards requires CCAP Core and RPD must support both IPv4 and IPv6, which means the Remote PHY Signaling between the CCAP Core and RPD is able to run on both IPv4 and IPv6 networks.

| | |
|---|---|
| **Note** | • CCAP Core can support IPv4/IPv6 dual stack. <br><br> • RPD can support either IPv4 or IPv6 network. <br><br> • RPD does not support IPv4/IPv6 Dual Stack at the same time. <br><br> • RPD will try IPv6 connection first. When DHCPv6 failed, RPD will try DHCPv4. <br><br> • For single RPD, all the server addresses, protocols to communicate with it must be in the same IP version. |

# How to Configure RPD IPv6 Unicast Online

This section describes how to configure RPD IPv6 Unicast Online on Cisco cBR-8.

## Configuring Unicast IPv6

To configure Unicast IPv6, complete the following procedure:

**1** Enable IPv6 unicast routing.

**configure terminal**
**ipv6 unicast-routing**

**2** Configure IPv6 Address on DPIC interface.

**configure terminal**
**interface TenGigabitEthernet** *slot/1/port*
**ipv6 enable**
**ipv6 address** *ipv6_address*

# Configuring RPD core interface

To configure RPD core interface, complete the following procedure:

**configure terminal**
**cable rpd** *name*
**identifier** *rpd_mac*
**core-interface** *tenG_interface*
**principal**
**rpd-ds** *id* **downstream-cable** *controller* **profile** *id*
**rpd-us** *id* **upstream-cable** *controller* **profile** *id*

# Configuring IPv6 PTP Clock Option

To configure the IPv6 PTP Clock Option, complete the following procedure:

**1** Configure CBR as PTP slave, see the configuration example below:

```
configure terminal
    interface Loopback1588
        ip address 158.158.158.5 255.255.255.255
    ptp clock ordinary domain 0
        servo tracking-type R-DTI
        clock-port slave-from-903 slave
        delay-req interval -4
        sync interval -5
        sync one-step
        transport ipv4 unicast interface Lo15888 negotiation
        clock source 10.90.3.93
```

**Note**  CCAP-Core as PTP slave can only support IPv4.

**2** Configure R-DTI for RPD PTP IPv6.

**configure terminal**
**ptp r-dti** *number*
**ptp-domain** *domain*
**clock-port** *number*
**ethernet** *number*
**transport ipv6**
**clock source ipv6** *address* **gateway ipv6** *geteway*

> **Note**
> - PTP domain and 1588 master have same domain number.
>
> - Clock source IPv6 address is 1588 master IPv6 address.
>
> - Gateway is next hop to 1588 master, and it is optional.
>
> - For RPD, ethernet 1=vbh0, ethernet 2=vbh1, ethernet 0 will choose either vbh0 or vbh1 which is functional as clock-port.

**3** Associate R-DTI with RPD configuration.

**configure terminal**
**cable rpd** *id*
**r-dti** *number*

# Verifying IPv6 PTP Clock Option Configuration

To display the CBR PTP Status, use the **show ptp clock running** command as shown in the example below:

```
Router# show ptp clock running
Load for five secs: 6%/2%; one minute: 7%; five minutes: 8%
No time source, *05:11:13.610 UTC Sun Oct 22 2017
PTP Ordinary Clock [Domain 0]
        State          Ports        Pkts sent       Pkts rcvd       Redundancy Mode
        PHASE_ALIGNED  1            2478203         7512533         Hot standby
                              PORT SUMMARY
                                                                              PTP Master
Name            Tx Mode      Role          Transport    State       Sessions  Port Addr

slave-from-903 unicast      slave         Lo15888      Slave       1          10.90.3.93
```
To display the RPD PTP Status, use the **show ptp clock** command as shown in the example below:

```
Router# show ptp clock 0 config
Domain/Mode        :    0/OC_SLAVE
Priority 1/2/local : 128/255/128

```

# How to Configure IPv6 DS Splitting

This section describes how to configure RPD IPv6 DS splitting on Cisco cBR-8. In this configuration, different RPDs share the same DS SG traffic. For each DS sharing controller, one unique IPv6 multicast IP is assigned according to multicast pool. When RPD is IPv6 online, all DS sharing Controller associated multicast IPs are IPv6 type. Multiple DS controllers used by one RPD core must be either IPv4 or IPv6 and cannot be mixed. RPD sharing same DS Controller must only be IPv4 or IPv6 online and cannot be mixed. Multiple RPD cores in one RPD must only be IPv4 or IPv6 online and cannot be mixed.

# Configure the multicast IPv6 DEPI pool

To configure multicast IPv6 DEPI pool, complete the following procedure:

**configure terminal**
**cable depi multicast pool** *id*
**ipv6 address** *ip/prefix*

# Enabling Multicast Sharing under Downstream Controller Profile

To configure Unicast IPV6, complete the following procedure (same as IPv4 downstream splitting):

**configure terminal**
**cable downstream controller-profile** *id*
**multicast-pool** *id*

# Configuring the RPD with the Same Downstream Controller and Profile

To configure the RPDs with the same downstream controller and profile, complete the procedure as shown in the example below (same as IPv4 downstream splitting):

```
configure terminal
    cable rpd node_1
        core-interface tenGigabitEthernet 9/1/0
            rpd-ds 0 controller downstream-cable 9/0/0 profile 0
            rpd-us 0 controller upstream-cable 9/0/0 profile 221
    cable rpd node_2
        core-interface tenGigabitEthernet 9/1/0
            rpd-ds 0 controller downstream-cable 9/0/0 profile 0
            rpd-us 0 controller upstream-cable 9/0/0 profile 221
```

# Configuring the RPDs to different fiber-nodes

To configure the RPDs to different fiber-nodes, complete the procedure as shown in the example below (same as IPv4 downstream splitting):

```
configure terminal
    cable fiber-node 100
        downstream Downstream-Cable 9/0/0
         upstream Upstream-Cable 9/0/0
    cable fiber-node 101
        downstream Downstream-Cable 9/0/0
         upstream Upstream-Cable 9/0/1
```

# Configuring the RPDs to MAC Domain

To configure the RPDs to the MAC domain, complete the procedure as shown in the example below (same as IPv4 downstream splitting):

```
configure terminal
    interface Cable9/0/0
        downstream Downstream-Cable 9/0/0 rf-channel 0
        downstream Downstream-Cable 9/0/0 rf-channel 8
        upstream 0 Upstream-Cable 9/0/0 us-channel 0
        upstream 1 Upstream-Cable 9/0/0 us-channel 1
        upstream 2 Upstream-Cable 9/0/0 us-channel 2
        upstream 3 Upstream-Cable 9/0/0 us-channel 3
        upstream 4 Upstream-Cable 9/0/1 us-channel 0
        upstream 5 Upstream-Cable 9/0/1 us-channel 1
        upstream 6 Upstream-Cable 9/0/1 us-channel 2
        upstream 7 Upstream-Cable 9/0/1 us-channel 3
        cable upstream bonding-group 1
          upstream 0
          upstream 1
          upstream 2
          upstream 3
          attributes 800000F0
        cable upstream bonding-group 2
```

```
                           upstream 4
                           upstream 5
                           upstream 6
                           upstream 7
                           attributes 8000000F
```
Or use the following example (same as IPv4 downstream splitting):

```
configure terminal
    interface Cable9/0/0
        downstream Downstream-Cable 9/0/0 rf-channel 0
        upstream 0 Upstream-Cable 9/0/0 us-channel 0
        upstream 1 Upstream-Cable 9/0/0 us-channel 1
        upstream 2 Upstream-Cable 9/0/0 us-channel 2
        upstream 3 Upstream-Cable 9/0/0 us-channel 3
        cable upstream bonding-group 1
           upstream 0
           upstream 1
           upstream 2
           upstream 3
           attributes 800000F0
configure terminal
    interface Cable9/0/1
        downstream Downstream-Cable 9/0/0 rf-channel 8
        upstream 0 Upstream-Cable 9/0/1 us-channel 0
        upstream 1 Upstream-Cable 9/0/1 us-channel 1
        upstream 2 Upstream-Cable 9/0/1 us-channel 2
        upstream 3 Upstream-Cable 9/0/1 us-channel 3
        cable upstream bonding-group 1
           upstream 0
           upstream 1
           upstream 2
           upstream 3
           attributes 800000F0
```

# Enable IPv6 multicast on Cisco cBR-8 Router

To enable the IPv6 multicast on cBR-8, complete the following procedure:

**configure terminal**
**ipv6 multicast-routing**
If cBR-8 and RPD are connected in L2 network, we recommend to enable MLD Snooping in L2 switches.

# Verifying the IPv6 DS Splitting Configuration

To display the IPv6 multicast DEPI pool, use the **show cable depi multicast pool ipv6** command as shown in the example below:

```
Router# show cable depi multicast pool ipv6
Load for five secs: 8%/2%; one minute: 7%; five minutes: 8%
No time source, *06:57:11.898 UTC Sun Oct 22 2017
POOL ID    IPv6                                       DESCRIPTION
22         FF3B::8000:0/100
50         FF3A::8000:0/126                           zyq
100        FF39::8000:0/120                           zyq
Infra_C05#show cable depi multicast pool ipv6 id 22
Load for five secs: 8%/2%; one minute: 8%; five minutes: 8%
No time source, *07:00:03.577 UTC Sun Oct 22 2017
POOL ID    IPv6                                       DESCRIPTION
22         FF3B::8000:0/100
```
To display the assigned IPv6 multicast address, use the **show cable depi multicast ipv6** command as shown in the example below:

```
Router# show cable depi multicast ipv6 all
Load for five secs: 10%/3%; one minute: 8%; five minutes: 8%
No time source, *07:01:33.659 UTC Sun Oct 22 2017
```

```
IPv6                                       POOL ID   CONTROLLER
FF3A::8000:0                               50        9/0/2(291)
FF3A::8000:1                               50        9/0/28(317)
FF39::8000:0                               100       9/0/29(318)
FF3A::8000:2                               50        9/0/30(319)
Infra_C05#show cable depi multicast ipv6 FF3A::8000:0
Load for five secs: 7%/2%; one minute: 8%; five minutes: 8%
No time source, *07:01:44.020 UTC Sun Oct 22 2017
IPv6                                       POOL ID   CONTROLLER
FF3A::8000:0                               50        9/0/2(291)
```

To display the relationship between the downstream controller profile and IPv6 multicast Pool, use the **show cable downstream controller-profile** command as shown in the example below:

```
Router# show cable downstream controller-profile 100
Load for five secs: 24%/3%; one minute: 10%; five minutes: 8%
No time source, *07:10:28.074 UTC Sun Oct 22 2017

Downstream controller-profile 100, type RPHY
Description:
Downstream controller-profile 100 is being used by controller Downstream-Cable:
  0/0/30,
  Admin:  UP
  MaxOfdmSpectrum: 192000000
  MaxCarrier: 158
  Mode: normal
  Free freq block list has 3 blocks:
    45000000  - 449999999
    594000000 - 602999999
    795000000 - 1217999999
  DS Splitting: Yes
  Multicast Pool ID: 50
  OFDM frequency exclusion bands: None

Configured RF Channels:
Chan Admin Frequency  Type      Annex Mod  srate Qam-profile dcid  output
 0   UP    453000000  DOCSIS      B   256  5361  1           1     NORMAL
 1   UP    459000000  DOCSIS      B   256  5361  1           2     NORMAL
 2   UP    465000000  DOCSIS      B   256  5361  1           3     NORMAL
```

To display the RPD associated with the downstream controller, use the **show controllers downstream-Cable** command as shown in the example below:

```
Router# show controllers downstream-Cable 9/0/2 rpd
Load for five secs: 8%/2%; one minute: 9%; five minutes: 8%
No time source, *07:14:20.326 UTC Sun Oct 22 2017
Controller RPD DS Port List:(2 of 2)
  RPD ID          I/F       Name
  --------------- --------- ----------------
  badb.ad13.5d7e  Te9/1/2   node_3
  0004.9f03.0256  Te9/1/2   node_5
```

When the DS Controller IPv4/IPv6 type and the RPD IPv4/IPv6 online type conflicts, the RPD log prompts the confliction as shown in the example below:

```
Router# show cable rpd 0004.9f00.0979 Te3/1/0 log reverse
RPD ID I/F Severity Time LOG INFORMATION
--------------- ---------- ------------ ----------------------
-------------------------------------------
0004.9f00.0979 Te3/1/0 ERROR
2017-09-23 21:44:52.851 RPD 0004.9f00.0979 CoreTe 3/1/0 reset connection due to unmatched
IPv4/IPv6 between GCP connection(IPv6) and Downstream Sharing Controllers 3/1/0(IPv4)
0004.9f00.0979 Te3/1/0 ERROR
2017-09-23 21:44:50.817 RPD 0004.9f00.0979 CoreTe 3/1/0 reset connection due to unmatched
IPv4/IPv6 between GCP connection(IPv6) and Downstream Sharing Controllers 3/1/0(IPv4)
```

# Feature Information for Remote-PHY Device IPv6

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

*Table 2: Feature Information for Remote-PHY Device IPv6*

| Feature Name | Releases | Feature Information |
|---|---|---|
| Remote-PHY Device IPv6 | Cisco 1x2 / Compact Shelf RPD Software 3.1 | This feature was introduced on the Cisco Remote PHY Device. |
