Remove Cisco Crosswork Optimization Engine and Cisco Crosswork Data Gateway

This section contains the following topics:

Deleting Cisco Crosswork Optimization Engine and Cisco Crosswork Data Gateway

The procedure to delete a Cisco Crosswork Optimization Engine VM and Cisco Crosswork Data Gateway VM is the same.

Note
- Be aware that this procedure deletes all your Cisco Crosswork Optimization Engine and Cisco Crosswork Data Gateway data.

- **If you want to delete Cisco Crosswork Data Gateway only**, ensure you have done the following:
  - Detach the devices from the Cisco Crosswork Data Gateway VM you want to delete. The procedure to detach devices from a Crosswork Data Gateway is described in *Cisco Crosswork Optimization Engine User Guide*.
  - De-enroll the Cisco Crosswork Data Gateway from Cisco Crosswork Optimization Engine as described in De-enroll Cisco Crosswork Data Gateway.

Step 1 Log in to the VMware vSphere Web Client.

Step 2 In the **Navigator** pane, right-click the VM or Cisco Crosswork Data Gateway VM that you want to remove and choose **Power** > **Power Off**.

Step 3 Once the VM is powered off, right-click the VM again and choose **Delete from Disk**.

The VM is deleted.
